'I have had the good fortune of being able to attend each Conference since my transfer to Ohio in 1955. I have appeared on various panels in the past few years but this is the first time I have had the honor of being a principle speaker.

"Our Session Topic is, **'Apprenticeship Qualifications and Selection.'** This is a subject that has been discussed—at least briefly—at most of the past Conferences that I have attended, but I don't believe these past discussions have given us something concrete to use in our various selection procedures.

"Possibly today we can combine our methods of selection and determine what the requirements should be—to give us a candidate with the necessary qualifications—so that at the end of four years of training, we have a good journeyman.

"I believe that this is the tougest job we have in Apprenticeship Training. All of us, I am sure want the best and most deserving men on our programs. I am also sure that this is not always accomplished for a number of reasons. A candidate may look good on paper but not possess the mechanical ability, or he may have excellent mechanical ability but lack the mental capabilities to complete his related school work.

"Each time we have put a young man on our Apprenticeship Program, the thought has always come to my mind that there is another young man who is being condemned to a job in an unskilled occupation. Frankly, this frightens me a great deal.

"Most of you in this room have been given this power to shape the destinies of many young men, and I am sure that you try to be fair to your company and fair to the candidates—to do this we must

use every tool available to select the best man for the job—the most deserving man for himself.

"I really don't believe there is a sure way to be 100% successful in selecting the right man for apprenticeship all the time—but I do believe we can reduce the number of dropouts by combining our ideas in this area of Qualification and Selection.

"I am employed by a company that has graduated almost 11,000 apprentices into the ranks of 27 different Journeymen Classifications, and it would seem that we would have our selection programs down to a science that would defy improvement. Unfortunately, I don't believe that this is true—or maybe I should say fortunately; and I am sure most other persons in Apprentice Training at Ford don't believe this is true, because the moment you think you have the best that there can be in any field, that is the moment you stop looking for better ways to do the job and you and your company begin to stagnate.

"Through the years, our apprentice selection procedures have changed several times and each time we have seen improvements in the number of completions compared to the number of enrollments. This would indicate that we are at least moving in the right direction.

"The last time we changed our procedures was in September of 1964. At that time, the requirements for apprenticeship at Ford was lowered. This may sound strange at a time when everyone is trying to improve their selection procedures, but I would like to explain our thoughts in this area a little later if you don't mind.

"First, I would like to go back into a little history or apprenticeship training at Ford, and in this way explain how we have reached our present selection procedures.

"Apprenticeship training first began at Ford in the year 1915 and the candidates were picked simply by appearance or because of relationship to a Ford employee. The apprentice would be placed in the Apprentice School set up on the balcony of our Highland Park Plant. If they looked they had mechanical ability, they were allowed to complete the apprenticeship. If not, they were either terminated or placed on a production job.

"We did have one excellent source of apprentices in 'Ford Trade School Graduates.' Until the closing of this school in 1958, all graduates were automatically placed on an apprenticeship if they desired.

"It wasn't until approximately 1941 that Ford started testing all applicants for hourly employment. The applicants with the best scores on these tests were placed on the Apprentice Program. Through all of this time, Ford was operating without a Union. In 1941, the hourly employees voted in favor of Union membership. In the latter part of that year, the Joint Apprenticeship Committee was formed and certain, more uniform selection procedures were established.

"The J.A.C. held its first meeting on November 11, 1941, and in this meeting, it was agreed that Ford Trade School Graduates would continue to be automatically eligible for apprenticeship. They also agreed that all production workers between the ages 18-21 who were qualified, would be eligible for apprenticeship and that those qualified would be placed on the program in order of seniority.

"It wasn't until 1945 that selective tests were given to apprentice candidates—but they still continued to use seniority as the basis

for placement as long as the tests were passed and high school records were satisfactory.

"Finally, in October 1947, the J.A.C. changed the policy of selecting apprentices from one of seniority to one of seniority and qualifications. A motion was made and approved that an applicant with outstanding qualifications would be given preference over the seniority man. Until that time, our hands were tied in the selection procedure in that we could not take young men out of high school no matter how good their qualifications might be because they were not seniority employees.

"It was not until 1949 that any studies were made to determine how successful our selection procedures had been— 34 years after the start of Apprentice Training at Ford, and after approximately 5,000 apprentices had graduated to Journeymen status. The results of these studies were alarming. To get these 5,000 journeymen—close to 15,000 young men had been placed in apprenticeship training.

"Needless to say, action was started immediately to improve this situation. In 1950, the Manager of Training assigned a psychologist to work with the Aprenticeship Training people to select standard tests which would do a better job of screening applicants. Two tests were selected—one was the Wonderlic Personnel Test to measure mental ability and the other was the Bennett Mechanical Comprehension Test to measure mechanical ability. Also an organized system of following the progress of the Apprentice and direct counseling with corrective action was inaugurated.

"In 1956, the selection procedure was refined by the J.A.C. to include qualifications in addition to the psychological tests. With this procedure the applicant is given points in various areas—test results, high school record, work experience, Ford employment, and an evaluation by the Company and Union interviewers.

"In 1958, a comparsion was made between groups placed on course from 1947 to 1957, and the graduates through the same period. It showed the completion percentage to be 60.6%. A similar study was made a year later showing further improvement to a completion rate of 64.1%—30% greater than the 34.1% in 1949. Also during 1959, two studies were conducted to isolate the groups who had taken the tests adopted in 1950 from other apprentices—the group placed on course from 1951—1955 was compared to the graduates from 1955-1959. The completion rate was 68.5%.

"All terminations of apprenticeship in 1961 were tabulated. Eighty per cent of the terminations represented graduation to Journeyman status. The other 20% were divided among those who:

Quit to go to college
Quit to accept other employment
Removed at their own request
Removed for cause by J.A.C.
Unable to continue because of illness or accident.

"Through the years—unlike most industries—the J.A.C. at Ford has, on occasion, lowered the requirements for filing application for Apprenticeship.

Example: 1957 removed upper age limit for apprentice applicants who are seniority employees.
1964 lowered high school requirements to completion for 10th grade.

and at first glance, it appears that we are lowering our standards for apprenticeship—This is not the case at all. We still select the candidate with the highest point accumulation on his application evaluation.

"What we have done is broadened the area in which apprentices may be selected. Because a man has passed his 27th birthday does not mean that his learning powers have vanished. True, in some cases they diminish to some degree, but we have proven that those in the the upper age bracket that meet our selection requirements can make very good apprentices and in turn, first-rate Journeymen.

"As to the lowering of our high school requirement—I will say that at this early point since this has gone into our system the only effect felt, as least at Ford's Cleveland Stamping Plant, is that we test a larger number of applicants and experience a greater number of failures on these tests. The majority of the applicants taking our tests with only a 10th grade education, fail to pass the tests. The few that have passed have not been able to accumulate enough points in other areas to be considered for apprenticeship.

"Gentlemen, I am well aware that some companies have a much more rigid selection procedure than we have at Ford. Their tests, I understand, are much lengthier and possibly reveal more information about the candidate than ours do. Maybe we at Ford should change our tests or our procedures in other areas. Or—maybe some of you would like to adopt some or all of the procedures at Ford. That is what we are here for—to exchange ideas—to improve apprenticeship training in any way possible.

"I would like to state a word of caution in setting standards for apprentice selection—remember, that our primary job is to increase the number of working journeymen in the trades. If standards are set too high we will have a group of apprentices and eventually, journeymen that will not be happy in their trade. They will drop out to enter college or seek jobs in managerical positions. I certainly have nothing against any man advancing himself, but we must have the majority of our apprentices stay in the trades or we are failing in our responsibility to increase the number of skilled tradesmen necessary to meet the challenges of our advancing technologies."

Mr. Sieger then thanked **Mr. Roy Harp** for his fine presentation on qualifications and selection used at the Cleveland Ford Stamping Plant.

An exchange of ideas followed. Many questions were asked of the panel members on qualifications and selection for all metal trades apprenticeship.

Examples were cited by representatives of various companies on their methods of selecting apprentices.

Chairman **Sieger** thanked all participants and panel members for their contributions and interest shown at this session. Meeting adjourned at 4:30 P. M.

OPERATING ENGINEER TRADES

Wednesday October 27

CHAIRMEN—MODERATORS

Kenneth W. McKee, Vice president, J. D. Fowler Company; Chairman, Mahoning Valley Operating Engineers Joint Apprenticeship Committee, Youngstown, Ohio

Calvin J. Malone, Secretary and Coordinator, Valley Operating Engineers Joint Apprenticeship Committee, Youngstown, Ohio.

Ray E. Stephens, Vice President, International Union of Operating Engineers Local No. 18, Cleveland, Ohio

Charles W. Rinehart, Manager, Industrial Relations, Ohio Contractors Association, Columbus, Ohio.

SPEAKERS

Vance Harper, W. L. Harper Company, Cincinnati, Ohio. Topic: "Training Concepts"

William L. Sells, State Supervisor, Bureau of Apprenticeship & Training, U. S. Department of Labor, Columbus, Ohio. Topic: "Federal Laws Affecting Apprenticeship Training."

John W. Palmer, Attorney, Knepper, White, Richards and Miller, Columbus, Ohio. Topic: "Federal Laws Affecting Aprenticeship Training."

Walter K. Bulford, Business Manager, Local #66, Pittsburgh, Pennsylvania Topic: "Progress Reports"

H. R. Przelomski, Representative, Bureau of Apprenticeship and Training, U.S. Department of Labor, Washington, D. C. Topic: "MDTA Operating Engineers' Programs"

CONSULTANTS

Paul A. Moore, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Youngstown, Ohio

Jack Volkmer, Representative, Trade and Industrial Education Service, Ohio Department of Education, Findlay, Ohio

OPERATING ENGINEERING TRADES

(First & Second Sessions)

The Chairmen and Moderators for these sessions were: **Kenneth W. McKee,** Vice President, The J. D. Fowler Co., Youngstown, Ohio, Chairman of the Mahoning Valley Opertaing Engineers, J.A.C.; and **Calvin J. Malone,** Director of Apprenticeship and Training, Local #66, Pittsburgh, Pennsylvania.

I. Welcome: Introduction and Opening Remarks by Chairmen

Robert L. Miller, Secretary and Coordinator, Mahoning Valley Operating Engineers Joint Apprenticeship Committee, Youngstown, Ohio.

"Welcome, Gentlemen, to the Operating Engineers Sectional Meeting of the 15th Annual Ohio State Apprenticeship Conference. I would like to introduce **Mr. Robert Emrick,** Coordinator of Local #542 the Philadelphia Joint Apprenticeship Committee, Mr. Emrick's territory extends to twenty-nine counties of eastern Pennsylvania and the entire state of Delaware. I would also like to recognize **Mr. George Pearson,** Local #370, Spokane, Washington; **Mr. Bob Kinghorn,** Local #370, Pocatello, Idaho and **Mr. Scott Spaw,** Local #428, Phoenix, Arizona.

"At this time let me introduce the two men who will act as Co-Chairmen and Moderators for this morning's session. (Mr. McKee and Mr. Malone were then introduced.)

"Without any further preliminaries, I'll turn this session over to Mr. McKee."

II. **Remarks:**

Mr. McKee—"At this time, I would like to introduce **Mr. Clarence C. Hanna, Executive Vice President of the Builders Association of Mahoning Valley."** "Mr. Hanna."

In the Youngstown area, I believe we enjoy one of the finest labor-management relationships in the United States. I have found Local #66 to be one of the most responsible labor organizations with which we deal. As a word of advice to other people thinking of starting an apprenticeship program, I would point out that mutual trust is manatory between the parties involved.

"To demonstrate, since the Mahoning Valley Operating Engineers Joint Apprenticeship Committee was founded, they have had their office in the offices of the Builders Association. The respective coordinators—all members of the local union—have enjoyed a privilege which is probably unique in the fact that they have had keys to the offices of the Association. They can at any time enter the building and, should they wish to, examine any of the files of the contractors association. This trust has never been abused and not one paper has ever been disturbed or any secrets violated. Gentlemen, I submit that only when mutual trust like this is maintained, can true cooperative effort be put forth to initiate an apprenticeship program to upgrade the industry. Gentlemen, I thank you for your attention."

Mr. McKee—"Thank you, Clancy. Now, gentlemen, at this time I would like to introduce **Mr. Jack Volkmer, Trade and Industrial Education Service, Ohio Department of Education, Columbus, Ohio.** Mr. Volkmer."

"It has been my privilege to sit in on your session for the past several years, but this has been my first opportunity to offer my comments. I might say that the State Division of Vocational Education is happy to cooperate and assist your programs in any way possible. Some of the ways that we assist the apprenticeship programs are:

1. A certain percentage of the instructors' pay is reimbursed to the local boards by the State Division.
2. We sponsor institutionalized MDTA training programs.
3. We assist in helping apprenticeship programs plan their curriculums.

The State Vocational Education Division will welcome any opportunity to assist you along these lines. Thank you, Gentlemen."

Mr. McKee—"Thank you, Jack, for your observations. Now let me introduce to you our local representative, **Mr. Paul A. Moore, from the Bureau of Apprenticeship and Training, U. S. Department of Labor, at Youngstown, Ohio.** Mr. Moore has worked very closely with our program through its development and we greatly appreciate his services as a consultant. Gentlemen, I give you **Mr. Paul Moore.**"

"Since I see by the agenda that we have a heavy schedule, I just want to say 'hello' and wish you a successful meeting at this time."

III. Greetings from International Headquarters and Round Table Discussion

Mr. McKee—"Thank you, Paul. Gentlemen, at this time, I would like to introduce to you **Mr. Reese Hammond, Director of Organization, Research and Education, International Union of Operating Engineers, Washington, D. C.** Mr. Hammond will bring us greetings from the International Union, and while he is still on the floor, we will have him report on the national progress in the Operating Engineers training endeavor. Gentlemen, I give you **Mr. Hammond.**"

"I'm sorry, Gentlemen that our International President Hunter P. Wharton could not be in attendance at this meeting because of previous commitments and because of the death of our International Trustee, Edward S. Walsh. Mr. Wharton, a member of Local #66, always points to the training program in Youngstown with justifiable pride since it was founded in his own local and he notes that the Youngstown Program has been very cooperative in sharing their information. He is always glad to send representatives from the International Union to attend these conferences in which Local #66 and the other surrounding locals participate. All that is needed is a letter, (in fact, a phone call will suffice) to secure men from the International Union to participate in these affairs. Mr. Wharton regreted deeply his failure to be in attendance, but as I have explained, the death of Mr. Walsh made this impossible. However, he asked me to convey his wishes for a successful conference.

"In the round table discussion, I see that I am supposed to give a national progress report. We have been in the past primarily interested in apprenticeship training, but due to changing times we have become involved with various other types of training. We have had to

concern ourselves with retraining of journeymen so that they might be more employable in the industry. Also, whether we like it or not, there are people entering the trade, through means other than apprenticeship; therefore, we have changed our approach, and at this time, we are working closely with the Job Corps and the Appalachia Program.

Our various locals are deeply involved in the MDTA training programs. Later this afternoon we will explore MDTA programs much farther. I think in the next 5 years the future of our union will depend on our ability to put good men in the driver's seat. In conclusion, all of us from the International are involved in every phase of training, retraining and the war on poverty."

Mr. McKee—"Thank you, Reese. May I introduce **Mr. Jack Kenney, Assistant Business Representative, Local #66, Youngstown, Ohio. Topic: 'Training Concepts—Specialist Versus the All-Round Operator."**

My topic this morning is the specialist versus the all-round operator. Today we are living in a world of specialization. It used to be that a family doctor treated all the ailments of the whole family. Today, in the age of specialists, we have obstetricans and pediatricans, doctors who specialize in internal medicine, surgeons, etc. to meet the various needs of the family.

"Attorneys also specialize in criminal cases, labor relations, divorce cases and real estate management. In sports, a definite trend is for the specialist. For example, in football there are offensive and defensive teams and specialists employed for kicking field goal attempts. I maintain these specialists are fine for their specific job, but in our craft we have found that the specialist cannot survive. Back not too many years ago, an engineer was a specialist to the point of running one type of machine. He had to travel all over the country in order to make living. He had no permanent home, and therefore, was looked upon as a shiftless individual—not respected by the community.

"Today, however, the engineer is part of the community in which he lives; he owns his own home, takes part in church and civic affairs and, in most cases, has become a respected member of his community. In the Operating Engineers, I believe we cannot afford to become specialists to the point of being able to operate only one machine. In our area we have all types of construction—home building, commerical, roads, bridges and a great amount of work in the steel mills. This diversified construction requires a variety of types of machine operators, and the operator who can only run one type of machine will have a hard time earning a living. I belive that all operators are better at one type of machine then others; however, he must not depend on his ability to operate only one specific machine.

"In our apprenticeship program, we are trying to develop a diversified type of operator who can run universal machines as well as dozers, scrapers and hoists. Our work seems to come in cycles, that is, where we may need crane operators one day, there could be a shortage of scraper operators the next. One of the most discouraging things for a business agent is to have 50 men out of work and still be unable to supply a contractor's needs. So, gentlemen, I maintain that by diversified training, these men will be more employable. A

business agent is a salesman selling labor and he must have versatile men available who can fill the needs of the contractor. The specialist is great in some fields, but not for the Operating Engineers."

Mr. Malone—"Thank you, Mr. Kenney. Total training is the only way to help them become all-round workers and citizens."

Question from Mr. Hanna—"What is the philosophy of the specialty training they do in the far west?"

Answer from Mr. Hammond—"The smaller the membership of the local union, the smaller the number of work opportunities. The point being that if you have a broad enough area of employment, there is probably more opportunity for a person who is a specialist in a certain trade classification than if you are dealing with a smaller field."

Answer from Mr. Spaw—"We can't train for un-necessary jobs. We train to fill the need."

Question from Charles Rinehart, Manager, Industrial Relations, Ohio Contractors Association, Columbus, Ohio—"In the highway industry where fifteen dirt movers are needed to one crane operator, isn't it more important to train men to specialize in dirt moving than to be versatile?"

Answer from Mr. Kenney—"Operators look on operating as a romantic job. The operating engineer enjoys sitting on the seat and operating a large earth mover when he is a young man, but when he becomes 35, he is no longer able to compete at this type of work. What are you going to do with a man who is no longer physically able to operate the scraper? We have an obligation to train him for all types of work so that he might be employable for the remaining thirty years of his productive life."

Answer from John Possehl, President, Local #18, Cleveland, Ohio—"I feel that in addition to the point that Jack made about the number of men unemployed who we cannot fit into the jobs available, we have many members working who are limited to one or two jobs. We need more adaptable men made so by training."

Answer from Mr. Malone—"We would ilke to train a better grade of operator with which to supply the contractor."

Observation by Mr. McKee—"The ones taking over the training of these people have an obligation to them for the future as well as the present and to train them for all phases of the trade."

Observation from Gregor Peterson, Secretary, Western Pennsylvania Operating Engineers Joint Apprenticeship Committee—"Dirt men are limited to five or seven months of employment a year. They must be able to run another machine or live on unemployment compensation the rest of the year."

Observation from George Pearson, Local #370, Spokane, Washington—"The immediate problem facing us is the progress of the construction boom caught us before we completed our plans for the training program."

Observation from Earl Whitehurst, Business Manager, Local #103, Fort Wayne, Indiana—"In Indiana, we find that the contractor has become a specialist too. So in many cases, he does not need an all-round engineer. However, the men find themselves unemployed when the particular contractor does not have a job."

Observation from John Hobbs, Assistant Business Representative, Local #18, Akron, Ohio—"If you don't have all-round training you will wind up with young men who will, in a relative short time (10 years), become physically unable to operate these machines. Therefore, an all-round program is desirable."

Observation from Mr. Hammond—"If we are faced with a need for specific kinds of people, we have to be cautious. If we have to waste money on these crash retraining programs in order to meet a need that we didn't forsee, then we had better learn something from it and get ourselves into a position that we can economize on."

Observation from Mr. Kenney—"I believe the weather conditions in various parts of the country dictates the type of training needed whether specialized or more comprehensive. Earth movers are employable part of the year in colder climates and need all-round training, whereas, in hot climates, weather permits dirt moving throughout the year."

Observation from Mr. McKee—"No one program can fit all areas of the country nor can if fit any area constantly. It will have to be changed periodically to meet everybody's all-round needs.

Mr. Malone—"At this time, I would like to introduce **Mr. Vance Harper, W. L. Harper Company, Cincinnati, Ohio.** Mr. Harper."

"My opinion of training needs are:

1. Do you want to train your men to do everything and do it half well or be specialists?
2. There is a tremendous shortage of good mechanics. Not only a shortage of mechanics, but also a shortage of operating engineers.

"This past summer, we were unable to obtain competent mechanics. As a result, we had to work our men 60 to 80 hours a week. This was costly to the contractors because of the overtime pay involved and because of the loss of efficiency due to the great number of hours these men had to work. Due to the shortage of trained men, some of our equipment had to remain idle for a couple of weeks, because the operators who had previously run these machines had quit to take more attractive jobs. Gentlemen, I maintain that it is the responsibility of the apprenticeship committee to train men to fulfill the needs of the contractor.

"I feel that the reason I have been selected to speak at this time is that I am a trustee of the Training Fund of the statewide organization. I am rather new in this capacity so, gentlemen, I welcome this opportunity to participate, and I feel that I will learn much at this conference."

Questions from Earl Erwin, Assistant Business Representative, Local #18 Cincinnati, Ohio—"Mr. Harper, did you contact the office in Cincinnati for skilled mechanics?"

Answer from Mr. Harper—"No, not me personally, but Mr. Sloan who handles this for me said that no mechanics were available."

Comment from Mr. Erwin—"Competent mechanics were available throughout the summer."

Comment from John Franks, Assistant Business Representative, Local #18, Cleveland, Ohio—"In the Cleveland area, competent

mechanics were available throughout the summer; in fact, many of them had to take employment as operators rather than mechanics in order to work."

Comment from Mr. Harper—"I will make note of this and check on it."

Mr. Malone—"May I introduce **Mr. Williams Sells, State Supervisor of Apprenticeship and Training, U. S. Department of Labor, Columbus, Ohio,** Mr. Sells."

"Before I begin my speech, I would like to say that there are quite a few people trying to face up to the same problems you are facing today. Apprenticeship, as I see it is going to be, to a degree, the solution for these problems, but it is not the complete answer. I do believe that in working your apprenticeship out, you should give basic training that will enable these men to change from one job to another at various times in their lives.

"I have been asked to speak at this conference on the federal laws affecting the training. We have under Labor Title 29, Part 30 issued by the Secretary of Labor, December, 1963, a regulation covering nondiscrimination in apprenticeship selection as follows:

> 'Selection of an apprentice under the program shall be made from qualified applications on the basis of qualifications alone and without regard to race, creed, color, national origin, sex or physical handicap irrelevant to the occupational requirements in accordance with objective standards which permit review, after full and fair opportunity for application. This program shall be operated on a completely nondiscriminatory basis.'

"Each apprenticeship program registered with the Ohio State Apprenticeship Council shall operate on the basis of the following standards: The selection of an apprentice shall be made on the basis of qualifications alone in accordance with objective standards which permit review after full and fair opportunities for application.

"Examples of these standards by which comparative qualifications may be determined are fair aptitude tests, school diplomts, age requirements and personal interviews to determine desired qualifications. Gentlemen, I might urge that you keep all records pertaining to application and selection of apprentices to permit review.

"This means that these records of selection must be made available to the Council or its designated representative upon request. Such records must be maintained for at least two years. Nothing contained in this state plan shall be construed to require any program, sponsor or employer to select or employ an apprentice in the proportion which their race, color, creed, or national origin bears to the total population, the number of company employees or any proportionment factor. The law also requires prior to taking application that you notify the various school systems and state employment agencies in the area which you serve. I might also point out that in the final selection of an apprentice, the ranking system is applicable. That is, for example, if 30 apprentices qualify and only 17 are to be selected that the 17 with the highest ranking would be selected and the rest could reapply on following years. I might urge you again to keep a full record that would permit review at any time."

Mr. Malone—"Thank you, Mr. Sells. I would like to introduce now **Mr. John W. Palmer, Attorney, with the firm of Knepper, White, Richards and Miller, Columbus, Ohio. Topic: 'Federal Laws Affecting Training.'** "

"There is probably no other field of endeavor that is so subject to laws, both state and federal. When we think about laws aflecting training, we immediately think of Labor Title 29 which deals with discrimination, but many other laws also apply. The Davis-Bacon Act is one of many such laws.

"The David-Bacon Act states that the prevailing rates must be paid on projects where federal funds are involved. A contractor cannot pay an apprentice rate unless the apprentice was indentured into a program registered with the Bureau of Apprenticeship and Training or a State Council, and the apprentice rate on file with the U. S. Department of Labor.

"The Labor-Management Disclosure Act of 1959 requires that all apprenticeship programs have a properly drawn trust.

"The Joint Committee can only spend money on that which is covered in the trust agreement. For example, if the Committee wants to upgrade training the trust agreement should make a provision for just that. Apprenticeship training alone will not solve all the training problems due to the constant changes and demands of the industry. So, I recommend that the trust agreement and standards be flexible enough to make this possible.

"The Joint Committee is required to make an annual audit that can be reviewed by the Internal Revenue Service or the Department of Labor.

"Federal law 501 C5 Internal Revenue code touches on income tax where the Joint Committee, to be tax exempt, has to comply with this section of the code. To conform with this they have to keep a complete and accurate record of all expenditures made and what each are for.

"Labor Title 29 governs the selection procedures of apprentices. Labor Tiltle 29 is an equal opportunity act with which every standard and trust agreement must conform. Proper selection procedures required that all records be open for review at any time and all records should be kept for at least two years. It would be advantageous to the Committee to conform and keep such records. In my opinion, if you were to notify county school boards and main employment services in the respective counties that the apprentice program services, you would be conforming with the laws as far as proper notification is concerned. I also suggest that when you notify the county school systems and state employment service offices that you list the qualifications you desire in new applicants and especially that you list motivation, that is, that you require that a man be interested in the trade.

"If present laws are not obeyed then other laws will be passed that will be more stringent and confining. In conclusion, I remind you that the Bureau of Apprenticeship and Training, U. S. Department of Labor is not an enforcement agency but rather it is only to advise and help to develop training programs. They are a wonderful organization whose services are always available, and I suggest you keep in touch so that they will be able to steer you in the right direction at anytime."

Upon completion there was a general discussion on sending notices to boards of education and employment services. Mr. Palmer again reiterated that if JAC's notify the county school system with a request that they notify all local branches in their jurisdiction and notify the main unemployment offices in each county that they service and request that they in turn notify their offices then they would be in compliance with the laws as he interprets them.

* * * * * *

I. **Opening Remarks—By Chairmen**
Ray A. Stephens, Vice President, International Union of Operating Engineers Local #18, Cleveland, Ohio; and **Charles W. Rinehart,** Manager Industrial Relations, Ohio Contractors Association, Columbus, Ohio

Mr. Rinehart— "I would like to introduce **Mr. Walter K. Bulford, Business Manager, Local #66, Pit tsburgh, Pennsylvania as our first speaker.** Gentlemen, Mr. Bulford."

II. **Program Progress Reports**

Walter K. Bulford, remarked "Gentlemen, I would like to thank you for inviting me to take part in your conference this year. I would like to report that Pittsburgh has an apprenticeship program that is working at this time with two classes of indentured apprentices. Also, we are submitting our Manpower Development O.J.T.—3 application for approval in the next several days. We are genuinely interested in retraining our journeymen who have not been so employable in the past.

"We have been working constantly to secure better wages and conditions and we are attempting to train more qualified workers for our employers' needs. Lately, I have been investigating several programs with the possibility of keeping our men employed throughout the winter months. I intend to establish a district form of government in Local #66 and I have the attorney working on this at present.

"I know that you are all familiar with the apprenticeship program in Youngstown which is part of our local. These boys have greatly assisted us in formulating our program.

Gentlemen, I have to catch a plane to be at a meeting in Pittsburgh, so if there are any questions I will attempt to answer them at this time."

Question from Mr. Miller—"Mr Bulford, would you elaborate on your future apprenticeship program for the outlying thirty-three counties of western Pennsylvania?

Answer from Mr. Bulford—"I plan to establish at least two other apprenticeship programs within the next year."

Question from Mr. Possehl—"Do teachers have to take any training program to teach?"

Answer from Mr. Bulford—"They have to pass an aptitude test."

Question from Mr. Possehl—"Are all your instructors from your membership?"

Answer from Mr. Bulford—"Yes."

Question from Mr. Possehl—"What are the requirements to qualify for an instructor?"

Answer from Mr. Bulford—"High school graduate or trade school, which would be an equivalent and experience in the trade."

Question from Mr. Possehl—"Who certifies these people?"

Answer from Mr. Bulford—"We pick the journeymen and they are certified through the Department of Public Instruction."

Comment by Mr. Miller—"In Ohio we have our instructors certified by the boards of education. We select the instructor and recommend him as being qualified and they certify him upon our recommendation."

Question from Mr. Rinehart—"Do you have any schedule for retraining the instructors?"

Answer from Mr. Bulford—"No, but the more he teaches, the more he learns about how to teach correctly."

Question—"After they receive their certification, does the school board pay their salary?"

Answer from Mr. Bulford—"They do."

Mr. Stephens—"If there are no further questions we will permit Red to leave to catch his plane and thank him for his remarks."

"Now. I want to introduce **Mr. Henry R. Przelomski, Chief, MDTA Section, Bureau of Apprenticeship and Training, U. S. Depart- of Labor, Washington, D. C.**

III. Round Table Discussion

"We have a number of Operating Engineers' MDTA programs coming in for approval now. A couple of these, no doubt, will be approved, some are receiving final consideration now. I might point out because of the cost involved, these programs are not as easy to secure approval for as others. Each one is a little different from the other. The needs of each state are different. We would like to come up with some basic programs that each local could adopt for its own needs. We would like some ideas on the length of these training programs, the number of hours of classroom work in relation to field training, the ratio of trainees per instructor. I hope after I leave today that a subcommittee could be appointed to come up with recommendations in regards to these matters."

Mr. Stephens—"We are ready for questions now."

Question by Earl Whitehurst—"Would it be permissible to have a journeyman working on the job as part of a retraining program at a reduced rate? Is this in conflict with the Davis-Bacon law?"

Answer from Mr. Hammond—"My reaction is that I would hesitate to set up wage skill rates without a pretty thorough understanding of what was going to happen. I feel that at some later time some employers might try to misconstrue this to their advantage."

Question from Mr. Hammond—"How much of the time that a person spends in training can we consider as on-the-job training?"

Answer from Mr. Possehl—"The time he spends in the seat, improving his manipulative skills in the field, safety instruction and time spent in observing other students, I feel could be considered O.J.T."

Question—"In this local due to bad weather, it is possible that the training program might have to lose several days of actual operation and if these trainees were lectured in the classroom during this time, could this be considered O.J.T"

Observation from Scott Spaw—"In Arizona, they do not have this problem because they can work everyday with their training program."

Comment from Mr. Possehl—"It is obvious that men training in this local cannot receive the same amount of actual on-the-job training as a trainee in Arizona."

Question from Mr. Stephens—"Why not conduct all training in Arizona?"

Comment form Mr. Przelomski—"I hope we do not try to tie the weather factor into the length of the training program."

Comment by Mr. Peterson—"The operator must acquire all the time possible at the controls, actual 'doing' is what makes an operator."

Question from Mr. Pearson—"Relative to field training, what ratio of trainees to machines would be applicable? Would a three to one ratio be acceptable?"

Answer from Mr. Stephens—"This apparently would be a very good ratio."

Question from Mr. Rinehart—"Why haven't the employers been brought into this retraining program?"

Answer from Mr. Stephens—"You are part of the program—that is the reason you are here on the program today."

Question from Bob Kinghorn, Local #370, Pocatello, Idaho—"How would this equipment for retraining be acquired?"

Answer from Mr. Stephens—"We hope to acquire some surplus equipment from the government, some by equipment rental and have to borrow some from the Ohio Contractors Association that is not being used."

Question—"Isn't it true that most people brought into this program will have four years of service to the industry."

Answer from Mr. Stephens—"Yes."

Question—"What are the federal regulations as to who is eligible for this program?"

Answer—"Everyone who is underemployed according to records ascertained from pension and welfare funds. It will be the younger, ambitious persons."

Comment form Mr. Hammond—"I think the safest cut-off point is the eligibility for pension funds."

Question—"What inducement do we have to get persons to enter these retraining programs?"

Answer from Mr. Hammond—"He is paid up to $5 subsistence while at a training camp, in addition, up to $5 per week for each dependent (up to 4) plus unemployment, plus $45 a week while in training. A man can receive as much as $95 per week."

Question from Mr. Kinghorn to Mr. Hammond—"Hasn't the law been changed since the Camp Roberts training program in regard to payments to trainees?"

Answer from Mr. Hammond—"Yes a man no longer has to be a husband to be considered as head of the house."

Question from Mr. Kenny—"Could there be a survey made as to the length of time it would take a potential trainee to repay his

training cost to the Federal government by his increased payment of income taxes?"

Answer from Mr. Stephens—"A survey taken of the trainees from the Camp Roberts program indicated that at this time, it is estimated that it would take four years to repay the cost of training."

Mr. Hammond—"Would you, gentlemen, who have MDTA-type programs under consideration at this time please explain your program in two minutes for the benefit of those of us present?"

1. **Mr. Stephens**—"Our program will be held in the Appalachia area of southern Ohio in Monroe County. In the small town of Woodsfield, there is no industry there. We were received there with open arms. We intend to level off a hill to make an improved dirt land strip, an addition to the present airport. We intend to grade a dirt road, build some small dams and stack brush piles for wildlife preservation.

"We will have 3-6 week courses in which we hope to train 100 men each. We will train men in three occupations: grading machine operation, heavy duty mechanics and technical engineers. The trainees will be housed and fed in the 4H building at the local fairgrounds."

2. **Mr. Spaw**—"Our program will be conducted at Ft. Huachuca in Southeastern Arizona. Our project will include demolishing concrete foundations, preparing several athletic fields and building earthen retaining dams. Emphasis of training will be on the operation of scrapers, blades and tractors. We plan two consecutive four week sessions with each session retraining 30 equipment operators, 10 heavy duty mechanics and 10 grade checkers. Equipment for training will be rented from available contractors, equipment distributors and rental firms. For a nominal fee, our men will be housed, fed and necessary training facilities furnished by the Army Signal Corps at Ft. Huachuca."

3. **Mr. Kinghorn**—"Our program is going to involve a 5 7/10 mile road in Teton County in Idaho. This road has been proposed for many years but there has never been any funds available. It will not beat any legitimate contractor out of work, and it will result in the opening up of a ski area in the community where there has been no employment or enterprise of any kind. We hope to billet our trainees at a 4H camp in the nearby area and to feed them in the local high school cafeteria."

4. **Gilbert M. Bosworth, Business Manager, Local #841, Terre Haute, Indiana**—"Our program is not very far developed at this time, but we intend to stay at Fort Benjamin Harrison and use their facilities for housing and feeding our men. The improvements we intend to make will be at Fort Benjamin Harrison."

5. **Richard Mawhinney, Assistant Business Representative, Local #66, Pittsburgh, Pennsylvania**—"In Pittsburgh, we have had a frustrating time finding a site to hold our training program. We finally selected Camp Fatima, (Catholic Youth Camp). We are going to build a dam and a lake, relocate the 1 1/2 mile road, cut down the hills, build a playground area, put in 1 1/2 mile gas line and build a ski slope. The men will be housed and fed at existing camp facilities."

Question from Mr. Possehl—"Since it is religious owned land, how does it qualify as public land?"

Answer from Mr. Hammond—"I feel it is acceptable since in Virginia they did some work for a religious order home."

Mr. Stephens—"I would like to thank all of you at this conference for your participation. At this time let me introduce **Mr. Clair Arnett, an instructor for the Mahoning Valley Joint Apprenticeship Committee. Mr. Arnett:**

"Since as of now, our program is well on its way, there are many points that can be covered by an instructor. However, I want to dwell on one which— in my opinion—is one of the most important at our level of operation and a point for others who are starting a program to consider for future use.

"Our apprentices are in the field on equipment one day a week. This is good but still not the best. Everybody is striving for improvement and, of course the more time an apprentice has to operate, the more he improves. This extra time on the equipment isn't possible without an instructor present. So, my point is, if an instructor is available on the training site, then when an apprentice isn't working he can go to the training site and practice and, thereby, improve on equipment he may be weak on.

"Naturally, in our program as well as every one else's, the cost of such a man must be carefully considered. Here are some of the things to think about.

"Since this man is there all the time, he can keep the equipment in better shape, keep a better record system on greasing, oil changes and over-all maintenance. He is available for any equipment transfer or moving newly purchased equipment in to the school. He is also available to make up teaching aids to help himself, other instructors, apprentices and the committee.

"I think he would pay his way in this besides the additional help to the apprentices."

"As it was said this morning, the movement of the trade makes more or less specialization necessary. With this man available, a crash program would work easily to train these men on special machines. We have found from the two classes we have graduated that it isn't too much of a job to take these young men who have been trained on all equipment to specialize on any one machine."

Mr. Stephens—"Thank you, Mr. Arnett, for your observations. I want to call upon Mr. John Possehl for Local #18's progress report."

Mr. Possehl—"We have been working on an apprenticeship program in conjunction with Local #66. At the present time, we have established a trust agreement for the purpose of collecting moneys to operate the training program when we get started. **Mr. Gene Engle, Mr. Vance Harper,** and **Mr. Suttlelin** are representatives for the OCA.

Mr. John Franks, Mr. Earl Erwin and **Mr. Ray Stephens are** trustees from Labor. We are going to have a program determining whether we should organize a school in each district or establish a large training area to serve the whole state. However, probably to start, we will need to establish only one school for the present."

Mr. Stephens—"Gentlemen, may I introduce **Mr. Richard Mawhinney** who is substituting for Mr. Calvin Malone."

Mr. Mawhinney—"We have decided to go OJT all the way if

this is possible. The B.A.T. man in our area **Mr. Heinbaugh** has been cooperating with us very well. Our courses will consist of two training periods of six weeks duration in which time we hope to retain one hundred men. We have had excellent cooperation from the local offices and members in our union."

Mr. Rinehart—Summary of the Conference

"I think the contractors and union must have this mutual trust and faith in each other that Mr. Hanna refered to earlier today in order to develop an apprenticeship program. This is absolutely necessary.

"We do have a problem in the highway construction industry. After we train people to operate equipment, there isn't enough work to entice them to stay. So, I agree that we must train them in all phases of the trade to insure they do not leave us after we have invested money in their training.

"At this point, I will call for any further questions from the floor. There being none, let me turn the floor over to **Mr. Stephens.**"

Mr. Stephens—"Thank you. This conference would not be complete without Mr. Paul Moore's observations."

Mr. Moore—"Because I am the B.A.T. representative in Youngstown, I have been assigned to work in the past year with the operating engineers throughout the State of Ohio. In the past year, I appreciated this association because I have learned quite a lot to pass on to other trades and that is the function of the BAT to pass this information back and forth.

"I was very glad to hear **John Possehl** report that Local #18 had established a statewide J.A.C., and I am looking forward to working with **Mr. Engle, Mr. Harper and Mr. Suttlelin** from Management and with **Mr. Franks, Mr. Erwin** and **Mr. Stephens** from Labor. I would like to say that I will still continue to work with Local #66 in Youngstown, and I hope that in my new assignment—working with the operating engineers of the rest of the State—that I will continue to have the same relationship that I have had with the group in Youngstown as in the past, and a similar relationship with the new group.

There being no further comments, **Mr. Ray Stephens** adjourned the meeting at 5:00 P.M.

PAINTERS, DECORATORS AND PAPERHANGERS

Wednesday October 27

CHAIRMEN

Joseph Cerveny, Apprentice Coordinator, Brotherhood of Painters, Decorators and Paperhangers of America, Washington, D. C.

Glen Craven, Administration Assistant, Painting & Decorating Contractors Association, Chicago, Illinois

PANEL MEMBERS & SPEAKERS

Anthony Iosue, Financial Secretary, Brotherhood of Painters, Decorators and Paperhangers of America—Dist. Council #6, Cleveland, Ohio

Charles Tubman, Exec. Sec'y., Painting & Decorating Contractors Association of America, Cleveland, Ohio

Richard Bohls, Sr., Contractor, Columbus, Ohio

Donald Hogan, Ohio Trade and Industrial Education, Kent State University, Kent, Ohio

SECRETARY

Fred Haering, Secretary, Ohio State Conference of Painters, Columbus, Ohio

RECORDER

Mrs. Jeanne Smiley, Dayton, Ohio

PAINTERS, DECORATORS AND PAPERHANGERS

(First & Second Sessions)

The Wednesday morning session was called to order by **Daniel T. McCarthy** Bureau of Apprenticeship & Training, U. S. Department of labor; he welcomed the conferees to the 15th Annual Ohio State Apprenticeship Conference.

Mr. Joseph Cerveny, Apprenticeship Coordinator, Brotherhood of Painters, Decorators & Paperhangers of America, Washington, D.C. was introduced as Chairman for the A.M. session. Mr. Cerveny outlined the program for the entire day, the purpose being to exchange ideas, iron out apprenticeship problems and have a question and answer period. He complimented the conferees of the 14th Annual Ohio State Apprenticeship Conference on the contributions made last year, they reactivated the panel Contest which will stimulate the Apprenticeship and Training Program.

Mr. Cerveny introduced the Panel Members and Speakers, and then asked each conferee to introduce himself and their affiliation, Mr. Cerveny made comment of the fact that there were more contractors in attendance than any previous conference; he thanked them for attending.

Mr. Cerveny then introduced **Mr. Anthony Iosue,** Financial Secretary, Brotherhood of Painters, Decorators and Paperhangers of America, District Council No. 6, Cleveland, Ohio.

Mr. Iosue: "In my judgment, the Apprenticeship Program is a basic part of our over-all objective to create a better public image for the union painter.

"We know that a good painter does not appear instantaneously on the scene. Unfortunately, the general public does not realize the skills and experience necessary for one to become a master painter.

"The major paint companies with their do-it-yourself advertisements and their promotion of the idea that anyone using their paint, having a brush and half an hour to spare can do an excellent job of painting a 40-room house have not helped the cause of professional painting.

"In addition to our other efforts in the line of promoting professional painting, we try to emphasize the number of courses an apprentice painter may take, and the fact that they are college grad courses. At the present time, we are working with the Cleveland Community College to set up a program of grants and scholarships keyed to the apprentice painter to help to re-emphasize the fact that it takes not only good schooling, but years of experience to develop a professional in the painting industry.

"We urge not only our apprentices but our regular painters to continue their education to learn all they can about new techniques, of new materials and the like, because we realize that many of them will become supervisors and some of them will become contractors.

"One of the most encouraging aspects of our Apprenticeship Training Program has been our Coordinator Program. This is handled very ably in Cleveland by Ted Kramer, and I respectfully urge that those of you who do not use a coordinator, might be wise to consider the feasibility and practicability of doing so.

"What does a coordinator do? What purpose does he serve? In a nutshell, he fills the gap between the contractor on the one hand and the apprentice on the other.

"If there is a clash of personalities between a contractor and an apprentice, the coordinator is on the spot to smooth out the difficulties; to listen to both sides, and help to create a good working team.

"If an apprentice begins to miss school sessions, the coordinator is on the job right away—not months later . . . When it is too late. Is the apprentice losing interest? Is the contractor putting road blocks in front of the apprentice's training at the school? Or just what?

"The coordinator even serves a very vital purpose long before the apprentice comes to our school. He scours the high schools in the area to encourage likely candidates to make painting their profession.

"The time has long since passed when we could rely on heresay information to encourage young men to go into the painting trade.

"We must maintain our objective of selling ourselves to the public as men with professional status, fully as expert in their field as attorneys are in law; as accountants are in business procedures and methods; as doctors are in their treatment of the sick.

"We ourselves have to believe in this ideal-we have to insist on it. We must bend our every effort to maintain and enhance our professional status. Otherwise the painting profession will stagnate and deteriorate into a do-it-yourself mish-mash which will not be beneficial to us or to the general public."

Discussion followed and a lot of interest was indicated on Mr. Iosue's presentation. There were other questions asked, but particularly about how each area financed their Promotional and Apprenticeship Programs.

Mr. Ted Kramer, Coordinator in Cleveland, Painters, J.A.C., was asked to explain their program financing. Mr. Kramer spoke briefly on the Employer-Employee contribution and its advantages. He also explained how a coordinator was paid from these funds. It was concluded that a major problem of the Apprenticeship Program is financing.

The next speaker was **Charles Tubman,** Executive Secretary of the Painting & Decorating Contractors Association, Cleveland Chapter, Cleveland, Ohio. His subject was "Training Skilled People—The New Painting, Decorating and Paperhangers Textbook". The new National Painting and Decorating Manual was introduced to the conferees. It includes all the material used in the Apprenticeship Program, four books in one with an attractive cover, color illustrations on the pages. Also new this year are the Apprenticeship Manuals.

Mr. Tubman also explained how the books are obtained and paid for. He also announced the Apprenticeship Coordinator's office is now located in Washington, D. C. Mr. Tubman stated that bro-

chures would be sent out with information concerning the new textbooks this fall. The question was asked as to who could order the books. Mr. Tubman explained all orders must be countersigned by a union officer or an officer of a JATC.

Mr. Glen Craven, Administrative Assistant, Painting & Decorating Contractors Association, Chicago, Illinois, introduced the Chairman and Secretary of the Dayton JATC, **Mr. Gail Koogler,** Painting & Decorating Contractor, and **Mr. Frank Surd, Union #249.**

A discussion was started on "Why some contractors will and why some contractors will not hire apprentices?" Mr. Cerveny stated that a lack of communication between the JATC and the contractors was the big factor. The contractor somtime feels it is too expensive to hire an apprentice, although cost accounting procedures proved apprentices make just as much money for his employer as the journeyman.

Some contractors want to select their own apprentices and do not want to go by the standards of the JATC. These contractors must understand these standards, such as high school graduate means the apprentice is more capable to keep up with the class training. In some areas the JATC checks the progress of the apprentices every six months to be sure he is learning all phases of the industry; this is where selection by the established standards show up. After much discussion it was concluded that the Duties and Responsibilities of a JATC are:

1. Establish standards and procedures for selection of apprentices; careful selection means a more durable program.
2. Find good facilities for classroom instruction and utilize all available tools.
3. Place apprentices with qualified contractors.
4. Be sure all apprentices are registered with the appropriate registration agency, from the beginning date.

The panel was asked, if through the Grovernment programs to educate or upgrade High School Dropouts were developed, could these people enter the Painters' program and into the union. It again was established that the standards have been developed and that no exception should be made. They will be considered if they meet the standards, pass the aptitude test and are screened by the Committee.

Mr. Cerveny commented that our trade is an institutional program and we will meet with the Federal Government to explain the program, but when there is no more room for apprentices, the Government must not put men on the job training. If the applicant does not meet the standards he must be turned down. And if there is any Pre-Apprenticeship Program, it must run in conjunction with the Apprenticeship Program.

Mr. Cerveny noting the time suggested the meeting recess for lunch. He invited all conferees to the afternoon sessions, which would convene at 2:00 P.M.

* * * * * *

The afternoon session was called to order by **Mr. Glen Craven, Chairman.**

Mr. Craven introduced **Mr. Martin Graham,** Secretary Treasurer of the Ohio Building and Construction Trades. Mr. Graham gave a

short discourse on methods of successfully introducing young people to the Building and Construction Trades.

Mr. Craven stated that before starting on the material slated for the afternoon that the Painting & Decorating Industry had very little problems since the Civil Rights Laws went into effect. There are no charges against the program, the standards are set on an honest basis and the industry lives by them.

The first discussion for the afternoon session was Instructor Seminars. Mr. Craven stated that interest in the apprenticeship programs is stimulated by qualified instructors, he further stated that fourteen (14) cities would be selected where Journeymen Seminars shall be conducted. The Manual will be used, hitting on courses for about four (4) weeks.

Mr. Craven stated that all contractors benefit if the journeyman is qualified in painting and paperhanging. He appealed to all JATC members that if there is interest in an area, contact him or Mr. Cerveny for advice on developing Journeymen Training Courses.

The conferees were asked about their apprenticeship programs and the journeymen classes, and how they presented the program to hold interest.

The need for visual aids was then discussed. It was concluded that slides and films would benefit the classes, both apprenticeship and journeymen. It was agreed this should be a national project as it is too costly to be done on the local level. It was suggested that films be developed to coincide with the text books, therefore allowing the apprentices to see as well as read their assignments.

The last subject discussed was Safety. Mr. Craven explained the amount of free instruction that is available such as the Red Cross for first aid instruction and the Department of Safety & Hygiene here in Ohio; these people are here for your benefit and for your use, they are happy to schedule safety meetings for you.

The afternoon session ended with a General Discussion. Many things were discussed, many gripes were heard, but the session ended by the conferees thanking Mr. Craven, Mr. Cerveny and the Panel Members for a very educational and fruitful day.

There being no further business the Meeting was adjourned at 5:15 P. M.

PLUMBING AND PIPE FITTING TRADES

Wednesday **October 27**

CO-CHAIRMEN

David R. Bradford, Representing Bradford Plumbing and Heating Company, Dayton, Ohio

Robert Peacock, Chairman, Plumbers and Pipe Fitter J.A.C., Dayton, Ohio

SPEAKERS

C.B. Hurst, Director of Vocational Education, Patterson Co-op High School, Dayton, Ohio

Richard Clemens, District Director, N.A,P.H.C.C., Clemens Plbg., Dayton, Ohio

Leo L. Grove, Supervisor, High Pressure Piping, Ohio Dept. Industrial Relations, Columbus, Ohio

Dr. Robert A. Vogel, Director, Montgomery Board of Health, Dayton, Ohio

Joseph L. Phillips, Trng. Coordinator, Int'l. U.A. Trng. Fund, Washington, D.C.

John W. Lewis, Chief Plbg. Inspector, State of Ohio, Dept. of Health, Cols. Ohio

Colonel Wm. P. Richardson, Chief, Manpower Div., Ohio Selective Service System, Columbus, Ohio

CONSULTANTS

Paul Snyder, Representative, T & I Education Service, Ohio Dept. of Education, Dayton, Ohio

Robert Greeny, Plumbing Instructor, Apprentice Training School, Fairborn, Ohio

Bud Mumma, Chairman, Ohio State Plumbing and Pipe Fitters Joint Apprenticeship Committee, Toledo, Ohio

Merle R. Hemple Representative Bureau of Apprenticeship and Training, U. S. Department of Labor, Youngstown, Ohio

Joseph L. Phillips, Trng. Coordinator, International U. A. Training Fund, Washington, D. C.

James E. Malony, Apprenticeship & Training Representative, U. S. Dept. of Labor. Bureau of Apprenticeship and Training, Lexington, Kentucky

RECEPTION COMMITTEE

Ralph Haas, Business Agent, Plumbers and Pipe Fitters L.U. #162, Dayton, Ohio

Warner Malone, Bus. Agent and Pipe Fitters L.U. #162, Dayton, Ohio

Bert Wilhelm, Representing, Wilhelm Plumbing and Engineering Company, Dayton, Ohio

Robert Bricher, Representative, Bricher Plumbing Company, Dayton, Ohio

Herbert Vonderheide, Secretary, Master Plumbers Association, Cincinnati, Ohio

Ray Doxey, Representative, Plumbers and Pipe Fitters L. U. #392, Cincinnati, Ohio

David R. Bradford, Representing, Bradford Plumbing and Heating Company, Dayton, Ohio

Robert Peacock, Chairman, Plumbers and Pipe Fitters J.A.C., Dayton, Ohio

PLUMBING AND PIPE FITTING TRADES

(First & Second Sessions)

Co-Chairman, **David R. Bradford,** Contractor, Bradford Plumbing and Heating Company, Dayton, Ohio, opened the meeting with a few remarks and then introduced the first speaker, **Mr. Richard Clemens,** District Director, N.A.P.H.C.C., Dayton, Ohio who spoke as follows:

"It is really a pleasure to be able to appear before you this morning and bring you the best wishes of the National Officers and Association. I represent the National Association in Ohio and Michigan as Director from District 8.

"This morning the subject that I have chosen is 'Building a Force for the Future.' Actually, that is what you are doing. You are welding together the links to perfect your educational system for the apprentice and journeymen to make for a better grade of journeyman. According to history, back in 1883, when the National Association was organized in New York, one of the principal reasons for the formation of the Association was to establish an appropriate system to help in the program of training journeymen for the job of plumbing and heating.

"It has been brought forth in the records of the Association that a community school of education is desirable for teaching each apprentice so that he can become a master plumber. This was 83 years ago, and during the past 83 years the National Association through its state and local levels, has consistenly strived to improve the techniques in all training of the apprentice; but training the trainer individually has become increasingly important in the last few years.

"In 1961 there were 399 instructors. This year there are 600 registered from every state in the Union. During the past four years, the demand for the Purdue Seminar has increased and shows that there is a need for the industry to help the educator or the trainer of the trainees. This work could not have been completed as successfully if it had not been for the United Association. It is through the cooperation of the different groups of the National Association that this work has continued and progressed the way it has.

"There has been developed the essential and necessary information to further the training and preparation. The complete lay-out has been worked out between the two groups so that your job and training has been simplified. I think that everyone here possibly has more of an insight of this than I do. I have been away for six years and have not been exposed to certain reports of the advances you have made.

"If I can be of any further assistance to you, I will be happy to answer any questions. Thank you for your kind attention."

Question—Bud Mumma, Chairman, O.S.J.A.C., Toledo, Ohio.

"In regards to the instructors and students in Ohio, how do we rank percentage wise?"

Answer—Mr. Clemens: "I do not have that figure. Ohio has progressed. There are some areas on the west coast where there are very fine schools, but not as many as in Ohio.

The next speaker introduced by Mr. Bradford was **Mr Charles Hurst,** Director of Vocational Education, Dayton Board of Education, Patterson Co-op High School. Dayton, Ohio

"It is good to be here. Preparing young people is my business, too. I am not a plumber by trade. I am a printer. I commend the plumbing industry for the essential job it has done. I think the plumbing industry has a real concept of the need of the public. I think you have really done an exceptional job. I can't say, however, that you have done a better job than the printers.

"You have a big job to do. We have to think big. It is a big job to train and serve the public.

"A banker was on his way to work one morning when he saw a little boy playing. 'Think Big.' he said. Next morning he saw the little boy playing again and asked him if he was thinking big. This went on for aweek. Then one morning the little boy had a sign that read, 'Dog for Sale—$50,000.00' This was thinking big! The following morning the sign was gone. The banker asked the little boy if he sold his dog. 'Oh, yes.' was the reply, 'but you know I had to take two $25,000.00 kittens in exchange.' That was thinking big.

"We in education must think bigger than we have been. We must think big together. Vocational and technical education are preparing these young people for this important work in education.

"Apprenticeship has an early history. As early as 1883 in New York—back when the masters had a responsibility of teaching the Three R's—moral standards were the basis of education. Finally, the masters got together and decided to hire teachers. That was the development of public schools as we know them today. Those early schools were an outgrowth of the need of the young person to be taught. The master felt a responsibility in fulfilling his aim. Between parent and master is an interesting picture of differences in ideas. Education today seems to be taking a front line position—it is an important part of the pattern. Emphasis has been on training young people for a profession. One fourth go on to higher education but not all of them complete this education. Less than 10% realize professional goals. Dropouts are high.

"In plants and industry where training is given, I believe the apprentice reaps a real form of process and theory. Fifteen thousand people of high school level were enthusiastic about it. You have your work cut out for you. Technology is changing.

"I made a survey concerning maintenance and plumbing. The question is 'What do your apprentices need in addition to what they are getting?' This is the challenge, and we must work together to meet it. Some of the local people remember Perry Ritchie who did much to help the plumbing industry. You people have done a good job of education. Attitudes toward planning spell the difference between an effective job of education on special theory and programming. Attention to the big approach set standards and definite goals. Young people need goals. You have the ways and means of motivating. People buy things they see—even beetle hair cuts. So,

15

the emphasis is on the governing of the attitudes of men. Schools in general will reflect different attitudes toward a college education or training skilled workers.

"Guidance will have an important job to do and we need additional staff. Preference of occupational class study of pertinent information should be available to classes. One guidance counselor commented in a way that did show sympathy. He told the class he wanted some information about becoming a plasterer. One young man pointed out that he would pick a person highly skilled as a guide. Skills required in higher types of work should merit a real examination. Much time is taken up with testing people going on to higher education and there should be emphasis along this line. **Education is the basis for entry into any field.** It is a job to keep abreast. If you have a diploma, you may or may not realize the need for additional education. Encouragement is needed. Education today in schooled fields as well as in technical fields does not mean you are finished when you graduate from high school. Look for continuing classes and instruction in addition to reading all that you can.

"It is our concern that we introduce all persons in this school to the industry upon entering the field. Some companies get people who can maintain and keep high standards which you have set. Human resources are our big job.

"In Switzerland one third of the territory is land and mountains; one third unproductive and one third with no minerals, no oil, and no resources. The country is composed mostly of skilled workers.

"In the interest of apprenticeship, I would like to express an idea. I have wondered about a trade preparation course in connection with vocational preparatory school.

"This thought has occurred to me. Our industry, banded together with young people and their parents, should get a common course of understanding relationships. It would seem to me that if there were to be a foundation established to help the local board of education, it could be taught. This may not be a wild idea. I suggest it, but education costs money. It takes a little doing to get the money. It is available. We should get the whole picture and explore these ideas. A person should have a broad grasp of the people who make up the total industry. In this, gentlemen, I would have ways to explain and show young people who have considered some phase of the industry so that they can get a better grasp of the duties.

"As we plan and prepare together we can get the job done more effectively. We do try. We give attention to the things that need attention. We are grossly understaffed. I would like to see the things that hinder the industry ended. As I see the picture, with the demands being made, there is going to be more and more importance given to the trade—the way you want it. Think big. Do not deviate to get the job done. Sometimes we get the idea they want more and more pay for less and less work. I don't think this is basically true. You are known by your respectable work. All work is important if it is pursued nobly.

"One man who liked to see things built walked around where some men were working. He went to one fellow and said 'Sir, what are you doing?' The bricklayer said 'I am laying bricks.' He was doing it with SKILL. He asked another workman what he was doing. This

workman said with pride, 'I am building a good wall.' We now add PRIDE. After a while he inspected another part of the building and here he saw a man taking particular pains with the job he was doing. When he asked the same question the workman stepped back, viewed his work and said, 'Sir, I am building a cathedral.' This man added VISION.

"If there is anything I can do, I will be glad to be of help."

Mr. Leo L. Grove, Supervisor, High Pressure Piping, Department of Industrial Relations, Columbus, Ohio, explained the operation of his department and spoke on Senate Bill 631 and House Bill 361. He said that the classes should devote more time to teaching what is in the codes. He said he would be happy to come to any apprenticeship school and explain codes to them. If the codes are taught, it will make the job easier for everyone and eliminate confusion in the field.

Question—David R. Bradford, D. R. Bradford Plumbing and Heating, Dayton, Ohio asked "What will be the make up of this proposed advisory board?"

Answer—"I think actually that it will be made up of two from the Board of Building Standards. We would like to have a laborer or contractor. Most are in favor of having a board of a contractor, a laborer and additional members from each organization. I have no idea if we will accept this. Four or five names have been submitted by contractors to the Association. We are working on a program to try to get a qualified board established.

* * * * * *

Mr. Robert Peacock, Chairman, Plumbers and Pipe Fitter Joint Apprenticeship Committee, Dayton, Ohio, served as Chairman of the afternoon session. He opened the meeting by introducing **Dr. Robert A. Vogel,** Director, Montgomery County Board of Health, Dayton, Ohio, who spoke on plumbing and its importance to the health of a community. He stated "Health education is important in plumbing." He would like the counties to have the same licensing powers as cities. He further stated that the apprentices need to know what they are doing and why they are doing it. "Some think they know all about plumbing when they can handle a pipe wrench. They need examinations, both oral and written."

The next speaker was **Joseph L. Phillips,** Training Coordinator, International U. A. Training Fund, Washington, D. C.

"Again, it is my pleasure to be with you in another very successful state apprenticeship conference. Briefly, I am going to outline a few of the aims and objectives in the area of training. Much will be repetitious of statements already made.

"First of all the International training fund is one reason why training has taken on such importance. We, as plumbers, are members of this service organization. If our employers are successful, our journeymen will be successful. Much emphasis is placed on training. There will be additional textbooks for training departments. The training program at Purdue is outstanding. It is gratifying to see the results. We have at our disposal a reservoir of teaching talent. The purpose of all of this is to provide each student with the finest

teaching aids and assistance. Those receiving state funds must go to contest or the fund will be withheld.

"There are 23,000 indentured apprentices and 30,000 journeymen. How do you get the journeymen to attend school?

1. Get the house in order and take advantage of all devices
2. Make certain it is well recognized
3. Make sure the instructor is well qualified.

"Congratulations to you for having taken the time to recognize your local training program."

Discussion followed which was led by **Mr. Merle R. Hempel,** Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Youngstown, Ohio. He gave the following statistics concerning active apprentices as of 10-1-65:

PLUMBERS

	ACTIVE APPRENTICES 1-1-65	872
Registered	148

Following this discussion period, **Mr. John W. Lewis,** Chief Plumbing Inspector State of Ohio, Dept. of Health, Columbus, Ohio, made a few remarks on the progress of training and services available from the state level.

The Chairman Mr. Peacock then introduced the last speaker for the afternoon, **Colonel William P. Richardson,** Chief, Manpower Division, Ohio Selective Service, Columbus, Ohio.

"Mr. Co-Chairman, Consultants and Friends of Apprenticeship. It is always nice to receive an invitation to attend this annual conference, and I might say I would be quite disappointed if I didn't receive my annual invitation. It is a delight to be permitted to come and visit with all of you again.

"I always look forward to learning each year of the conference theme. Again, there has been an excellent choice in 'Apprenticeship —A Sound Investment for the Space Age.'

"We are in the space age and apprenticeship training is to be commended for giving recognition to modern trends, and we take note from your book and try to keep all of the Selective Service System as modern as can be possible.

"When we think of the space age we wonder what lies ahead, and, of course, we look ahead. It is at that point that we jointly recognize the importance of creating skills for the future and certainly we in the Selective Service System want to do all we can to assure a future.

"Sometimes in these discussions, and our discussions outside of this conference, in our day-to-day work it occurred to me that persons who didn't know us might get the idea that no young man

wants to serve America and that no employer is ever willing to give up an apprentice for military service; even possibly that with the induction of one or several that a company or a corporation or joint apprenticeship committee might fall apart. In actual practice, however, we know this is not quite true.

"I do know that our highly accelerated activity has created some problem and, of course, we have many times reminded you of this saying, 'The only problems that will go away if they are constantly ignored is adolescence and snow.'

"I think we are all coping with our problems, that is, you are not losing very many, if any, apprentices, and you are getting your programs in for review and approval.

"As I talked to you last year, we had 466 approved apprenticeship programs creating a variety of skills in this state. Opposing this, I was informed when leaving the headquarters yesterday afternoon that we now have 632 in this state.

"Now, it would bring up one pont—because as I talked to you last year we had small induction calls, possibly 6, 7 or 8 thousand nationally a month. Right now we are preparing for calls of 45,000 per month. So you see our activity has not doubled, but has gone to roughly six times what we were doing a year ago.

"With the approval of the many new programs (new to us as approved programs, not necessarily new programs, because many had been in operation for years), we must inform you that our local boards are tightening up in many areas of deferment so they are now holding to the requirement of our regulations that in order for an apprentice to be deferred he must have completed two thousand hours, if in the non-critical area, or a minimum of one thousand hours, if in one of the critical occupations.

"It is extremely important that I point out to you here that you should not wait until an apprentice has completed two thousand hours if non-critical, or one thousand hours if critical, before filing the request for deferment.

"We not only do not object but strongly urge that the minute an apprentice begins training under one of the approval programs that you file a request for deferment on the regular form and the number of hours completed will show of course 'zero.' By filing this form you are placing the Selective Service Board on notice that you are interested in this young man—then after he has reached the one or two thousand hour level the form should again be filed and annually thereafter.

"This brings us up to the point that with our highly increased calls, the induction age has rapidly gone down and this is certainly not an unlimited source of supply.

"So, it will probably be necessary very soon, possibly in December or January, to begin the induction of those persons who were married before August 27, 1965, and who had been, up until now, in a selection group which we would not have reached had the calls remained at a lower level.

"Therefore, it becomes imperative in all of these programs that you select the youngest qualified men you can find with the object

that they will have their year of training in before they reach age 19. In other words, if you do not start an apprentice until age 18½ he will not have accumulated the necessary hours before he would be reached for induction.

"Today, we are in an age of demonstrating against policies in Viet Nam and, of course, some isolated cases of burning and destroying their draft cards. Opposing this, of course, are letters from service men who are in Viet Nam and they in many instances are taking extreme pride in serving America and being there to do his bit to stem any further expansion of communistic advances.

"On the other hand, there is the inductee that was asked what he thought of Army draft and he said, 'I have three reasons for being in the Army. First, it was an opportunity to serve my country, second, I knew it would build me up physically; and third, the darn draft board came and got me.'

"However, on the serious side we want to do all we can in the Selective Service System (as pointed out earlier) to continue to assure through deferment a steady stream of apprentices into the journeyman status and at the same time we want to assure the induction of the required number of persons so that there will not be a question about our future in the space age.

"I have reminded you many times, and the past year has been a classic example, that you should not wait to file an apprentice training program for our review. Don't wait until you have a man under order for induction. In fact don't wait until you have a man under order for physical examination.

"If you have any young men 18-25 who are not veterans, you should have a program because already I have cautioned you that the single registrants are not in sufficient abundance to fill these high calls and that we are going into the married group. Whether we will have to go beyond that into the older people, 26-35, is not yet known.

"Whether the program is registered with the Council or not will not effect the ability of the employer or joint apprenticeship committee or labor from filing a program for review.

"I must say that most of our programs are those that have the approval of the Ohio State Apprenticeship Council, and while I am speaking of the Council, I must again point out the fine cooperation that John Kostyo and his office afforded the Selective Service System.

"I would also be remiss if I did not tell you of the excellent cooperation extended by Bill Sells and his area representatives of the Bureau of Apprenticeship and Training. We in the State Headquarters lean heavily on these two agencies, and I want to acknowledge the immeasurable help that they have given our Manpower Division over the years.

"Now, if there are any questions about filing a program, you should immediately get in touch with the nearest office of the Bureau of Apprenticeship and Training. These people have the necessary forms and instructions and complete 'know how' and by the time any program is submitted (after following their guidance), you can bet there are very few questions that we in State Headquarters must have answered.

"I think all program holders are to be commended for the modern and realistic approach to the related trade instruction; in that more programs every year are providing in excess of the minimum of 144 hours of related trade instructions for the apprentice. Thus there is not the fear when the apprentice misses a class or two that he does not meet the minimum and thus might face reclassification.

"So, here we are in 1965 and we do not have to look back too far to remember the Korean problem, the Berlin Air Lift, Formosa, more Berlin build up, the Lebanon scare, problems in Santa Domingo, and, of course, South Viet Nam.

"We do not know what might come next, but we do know that the Selective Service System stands ready at all times to furnish manpower under almost any conceivable circumstance and still provide deferments to keep the very fine balance that must be maintained.

"Please remember this is the 25th anniversary of the modern day Selective Service System. All of us have learned many lessons, so we shall proceed through the space age with complete confidence that we can meet our military commitments and create skills that might be very seriously needed, even more so then, than right now.

"We will not be shutting off the supply of these skills until it is absolutely necessary—meaning that there would be absolutely no alternative.

"I close with assurance to all of you that apprentice training in Ohio has a great firm friend in the Selective Service System.

"Many thanks."

Mr. Peacock closed the meeting by saying that a bus was waiting to transport all who desired to tour the Dayton Plumbing School to its location on Second Street.

Meeting adjourned.

ROOFING TRADES

Wednesday **October 27**

CO-CHAIRMEN

George J. Murphy, Representative, The West Side Roofing Company, Cleveland, Ohio

Emerson C. Sager, Business Agent, United Slate, Tile & Composition Roofers, Damp & Waterproof Workers Association, Local Union No. 86, Columbus, Ohio

SPEAKERS and TOPICS

Les Kautz, Marketing Manager, Build-Up Roofing Products, The Phillip Cary Manufacturing Company, Cincinnati, Ohio

Joseph A. Mihalka, Chief—Testing, Ohio State Employment Service, Columbus, Ohio

Walter Kunath, International Representative, United Slate, Tile & Roofers, Damp & Waterproof Workers Association, Cleveland, Ohio

CONSULTANTS

C. O. Tower, Assistant State Supervisor, Trade and Industrial Education Service, Southern District, Cincinnati, Ohio

Clayton B. Gabel, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Canton, Ohio

Paul Muntz, Industrial Leadership Training, University of Toledo, Toledo, Ohio

SECRETARY

Pearl Swank, Apprentice Roofer Instructor, Columbus Apprentice School, Columbus, Ohio

ROOFING TRADES

First and Second Sessions

The meeting was called to order at 9:30 A.M., by Chairman **Emerson Sager,** Representative of Roofers Local Union #86, Columbus, Ohio. Mr. Sager noted that the session would be devoted mainly to the State Roofers Joint Apprenticeship Committee, the new schools in operation, problems they may have, etc. He then announced that there were no bills for approval presently. Following these remarks Mr. Sager welcomed delegates and guests and requested those present to introduce themselves and state the respective organization represented. Upon completion of introduction by delegates and guests, Mr. Sager introduced **Mr. Gregory Murphy,** Vice President of West Side Roofing Company, Cleveland, Ohio, and Co-Chairman of the meeting.

Mr. Sager then opened the meeting for discussion of the statewide roofers apprenticeship program and asked if Canton had started school as yet. The question was answered from the floor. There has not been a program of schooling started as yet, however, arrangements for it are being discussed.

Mr. Sager then asked Mr. Murphy if Cleveland had established a school, and if so, was the program doing well. Mr. Murphy replied that Cleveland does have a school in operation. He then went on to speak of the difficulty in obtaining qualified young men interested in attending school and working at the same time; the problem of lack of work caused by weather conditions; finances; etc. At this point, Mr. Sager interrupted and stated that he would like to make the following comment; there is a definite problem due to fast turnover of work, whereas other crafts may be required to spend a considerable amount of time on a job, the roofer may complete his work within a week or ten days, in contrast to perhaps six months time required by the electrician or plumber or heating man. He stated that throughout the 88 counties in Ohio there are approximately 1300 roofers, which is indicative of this situation. Following this comment, Mr. Sager asked Mr. Murphy to continue.

Mr. Murphy stated that he felt their apprenticeship program was a good one, that their classes were conducted at Max Hayes Trade School, Cleveland, by a very qualified instructor, however, he also said he believes the program is too long since it is a three year course. He further stated that their committee had requested the government people to look into the possibility of a one year program. Mr. Murphy continued to say that at the present time they have 18 apprentices, with a union membership of 400 card men. He further said that since there is very little slate and tile work done, and they have only three contractors who still do this work, it seems highly improbably that they can train all their apprentices with only these contractors, insofar as slate and tile is concerned, along with the fact it seems rather unnecessary since the training will be little used in comparison to the time required to train for this phase. As an example, he cited the fact that two years ago the Cleveland local had 21 qualified slate and tile men out of an active membership of 300.

Mr. Murphy went on to discuss the problem of maintaining the interest of apprentices who are in their second and/or third year of training while introducing new students to the program. One instructor is used for all classes and the difficulty of the program is clearly understood. Also, Mr. Murphy remarked on the problem of rotating apprentices so they receive all phases of training because some of the larger yards in Cleveland are more or less specialized and the apprentice may be moved from a position where he is needed to some other location to receive training he will not use.

Can something be done to help alleviate these problems—such as cutting the required schooling program? Mr. Sager suggested this questions be directed to **Mr. Gabel,** Reprensentative, Bureau of Apprenticeship & Training, U. S. Department of Labor, Canton, Ohio, whereupon Mr. Gabel replied, " that state and national standards require a minimum two-year program with 288 hours of related classroom instruction. The three-year program is not a Federal requirement, it is a point of negotiation set at the local yevel. Some areas have a two-year program, others have three or more."

Mr. McKinnon, Toledo JAC Member — Fortunately, we in Toledo do not have these problems, actually we have a four-year program of which three years are spent in schooling and on-the-job training, with the fourth year served as an apprentice before journeyman status is obtained. We in Toledo, feel our program has been successful, and can normally maintain a class of 15 apprentices each year and we supplement the classroom instruction with field trips during normally slack time, slides and movies relating to the trade, various speakers and manufacturers' representatives. We also use training in connection with the Red Cross Safety Program, which is quite important to our program. Classroom credit is given for all these additional, but necessary, supplemental classes. I might suggest that you in Cleveland try to work closer to the book. What is your ratio of apprentices to journeymen?"

Answered by Mr. Murphy—"The ratio is approximately one apprentice for each 15 journeyman. However, we seem to be simply over saturated with card men. For instance, last year we had 42 permit men on jobs. We have only 18 apprentices, and these temporary permit men are not qualified to apply as apprentices."

Mr. Walter Kunath, Roofers International Representative, Cleveland, Ohio—"At this point, I would like to clarify the term 'permit men.' The term is illegal, they are either applicants or probationary journeymen."

Mr. Murphy said, "I believe in Cleveland the term probationary journeyman is used."

Mr. Salvator Ponzio, Business Agent, Roofers Local Union #71, Youngstown, Ohio, remarked "If you had only forty-two probationary journeymen last year, then how do you get just labor work done, such as work on gravel pile, etc.?"

Answered by **Mr. Owen McDermott,** Secretary, Roofers, Local #44, Cleveland, Ohio, said "We use very little temporary help with 300 on active membership."

Mr. Murphy stated this was true to the best of his knowledge and that since Mr. McDermott is the recording secretary his figures should be correct.

These statements were followed by further discussion concerning the length of the Cleveland program, with both Mr. Kunath and Mr. Gabel again stressing the fact that the minimum time requirements of National Standards must be met. Mr. Gabel pointed out also that it should take the required two years to properly go through the training manual and that since Cleveland program is relatively new it may take a little time for it to run more smoothly. Mr. Gabel stated he felt the primary concern should be training for the entire area and not just a localized situation.

At this time, Mr. Gabel stated he would also like to point out a printing error in the National Standards under the Selection Procedures, paragraph 4, sub-section D, page 9, which stated, "Applicants receiving a qualifying score will be interviewed by the Employer." The word "Employer" is in error, this should read "Joint Apprenticeship Committee" and that this error will be corrected.

Mr. Gabel further noted that as of January 1, 1965, there were 218 Roofing apprentices throughout Ohio, and as of October 1, 1965, there are 261 Roofing apprentices state wide.

Chairman Sager asked if there were any further questions or comments, and some discussion followed regarding the selection of apprentices, taking of applications, etc., by Cleveland since they do have a small apprentice class in proportion to Toledo, and it was generally agreed they should give their program time to settle down, and as this takes place, some of the problems will be resolved.

Mr. C. O. Tower, Assistant State Supervisor, Trades & Industrial Education Service, Cincinnati, Ohio, stated that it is very important to be sure an apprenticeship program provides more than just the bare essentials in order to hold the interest of the apprentice. The program must and should be augmented with movies, etc. There must be a method to recruit more men for the program if necessary, and they must be made to feel the program is worthwhile. Cleveland is not turning out the number of apprentices it should, at least it appears they are not. We must remember that as present members retire they will have to replace them with qualified men, who should be receiving their training now for the future.

Mr. Kunath requested time for a comment relating to this and said he would like to point out two things: (1) slate & tile men are scarce, they are practically all near retirement age, and as they retire, trained slate & tile men must be available to replace them; (2) there are many new materials in use today, many new methods of application in the field, be sure your program covers these points thoroughly.

The question was raised regarding advisability of having the business agent of a local union as a member of the local joint apprenticeship committee. It was agreed by all present that the business agent should be a member of the committee. It was suggested at this time if Cleveland does not have this, it would be worthwhile to check into it, since the business agent (s) of a local union are always closest to the work and the manpower situation.

Mr. Mike Liskany, Business Manager, Roofers Local #75, Dayton, Ohio, asked Mr. Murphy if their bargaining agreement covers provision for ratio of apprentices to journeymen. Mr. Murphy replied that it is not stipulated in the agreement, whereupon Mr. Liskany suggested it might be advisable to provide for it in future agreements.

Chairman Sager then asked Mr. Liskany how the apprenticeship program in Dayton is progressing. Mr. Liskany reported the Dayton program is doing very well and that the first class will be graduated this coming year.

Chairman Sager then asked for a report from **Mr. Ponzio** on the Youngstown program. Mr. Ponzio said their program is good and they have no particular problems. He did raise a question regarding payment of tuition and was advised by the various representatives how this is handled by their groups.

Chairman Sager called for further questions if any, or announcements.

Mr. Gabel inquired if there would be another State Roofers meeting soon. The answer was in the affirmative, possibly in February, 1966, if this would be satisfactory to all.

Mr. Murphy then suggested that if the next State meeting were held in Toledo, perhaps it would be possible to see the classroom setup used by the Toledo group. He received assurance that this could be done.

Chairman Sager stated that if there were not any further questions, the meeting would adjourn for lunch.

Mr. Liskany invited all present to be the guests of the Dayton Local at the Statler-Hilton Dayton Inn.

The meeting was then adjourned until the afternoon session.

* * * * * *

The afternoon meeting was opened by Co-Chairman **Emerson Sager** with the following remarks: First, Mr. Sager extended thanks to the Dayton Local for the luncheon; he then asked the Roofers and Roofing Contractors to please remain after the speakers had been heard, for another brief meeting. Mr. Sager requested delegates and guests present for this session to introduce themselves and state their affiliation for the benefit of those who were not present at the morning meeting. Following this, Mr. Sager turned the meeting over to Chairman **Gregory Murphy** for the afternoon session.

Mr. Murphy also expressed his thanks for the luncheon, stated the morning meeting had been a lively one with good results. After some additional words of welcome, Mr. Murphy introduced the first speaker of the afternoon, **Mr. Les Kautz,** Marketing Manager, Build-Up Roofing Products, The Phillip Carey Co., Cincinnati, Ohio. Mr. Kautz greeted the group, stated that he had anticipated addressing a group of apprentices and had prepared his speech for this purpose, and would give it anyway.

"Thank you, Mr. Chairman. It is a great pleasure for me to have this opportunity, and I feel highly honored.

"Dynamic is defined by some as involving those forces that produce change. We are in a rapidly changing industry. One in which you have programs involving young people. These young people become the key to our future success and better performing roofs.

"Have you ever asked yourself, 'Why does a business exist?' In my opinion business exists for three reasons: First, it is there to make a profit. Second, it is there to render a service. Third, to provide

employment and incomes that collectively further our economy. We are so very fortunate in America to be involved in a competitive system. One wherein the best product and the best service rendered at the least cost will be successful in spite of itself, but the efforts of every one in that business are important to that final success.

"I have spent over 25 years in this business, my first love has been B.U.R. Therefore, most of my remarks this afternoon will be confined to, or illustrated in, terms of the built-up roofing field.

"You are production workers as well as craftsmen. The products furnished to your employers by manufacturers today, and historically, really have no intrinsic value within themselves. A roll of felt, a tootsie of asphalt or a bucket of mud really does not mean anything until it is put in place. You are building custom made, finished products, on the job site and frequently under the worst conditions.

"To me it is interesting that in our business we are for the most part, working on top.

"That is a point within itself. We do think of the topside of the building being our work, but as you look into the future of your careers, your craft, and where you may fit into this business, keep in mind that many times there is as much business that involves your craft underground or within the confines of the building as there is on top. Even though we are topside men, this craft is looked down upon. Facing facts, we have earned a bad reputation. Many, many articles are written and a great many more unsubstantiated statements in certain instances are being made that attribute our problems to careless workmanship. It is common to say that a roofer just 'does not give a damn.' I do not believe this, but if any semblance of it is true, then it behooves everyone of us to do everything we can to change this impression the public may have.

"It's easy for us to reminisce, and looking back is easier than looking ahead. I think one of the great changes that brings this to our attention would be just a brief review of the vocabulary of the materials and equipments that existed in our industry just, well even ten years ago.

"We constantly referred to hot stuff, rolls, mud and when a job was being set up, there were not too many things to think about. You needed a kettle, some kerosene or coal oil, an ax, an 'A' frame, a rope, a pulley, a mop, a few extra buckets, some wheelbarrows, and a keg of nails.

"Now, we see a long list of new terms that involve things that people have to know. Bitumens, felts, adhesives, polyisobetylenes, neoprene, hypalon, polimers, elastimers, two-component systems, methelethelketone, poly-vinyl acetates, poly-vinyl chlorides, buytles, styrene butydyenes, urethane, poly-styrene, and then comes storage tanks, felt layers, gravel spreaders, propane gas, pumps, types of pumps, ratios of pumps, valves, seatings, hoses, recording thermometers, hoists, lativators, vapor barriers, perm ratings, well, yes, engineers, tube lock, as, hyde tack, labelle, and E. G. You will have to study; you will have to learn; you will have to read. We have become sophisticated.

"Our economy in America is growing so rapidly and the need for many new buildings, new types of buildings, is among our greatest

needs. Any phase of the workmanship that goes into the building of the structure that will protect costly equipment and precious time of expensively trained people, is just as important as the design of the building or the design of the missile that might go into it, or the life of that young boy or girl in the school house.

"I believe it would be interesting to tell you briefly about a new book that is being written. Probably two years will be required to write it. This will be 'The American Institute of Architects Comprehensive Design Manual for Roofing and Waterproofing Systems. A great many meetings have preceded the actual decision to go ahead with this book.

But prime among the things coming out of these meetings is that so many things, in fact everything in a structure and many times the occupancy can have an effect, pro or con, on the performance of the roof. We no longer just put an umbrella over the top of the building. (With a Bond)—too many things are interrelated, so we have to design systems.

"During World War II and the Korean conflict when the demand for structures was exceptionally *great, we started building structures* like your little boy builds with play blocks. Roofs were flat, walls were straight lines, supposedly, and we were dealing in cubes, rectangles or squares. Any engineer could put these things together and design a building. The architect was losing his place in the construction field. He had to put beauty into structures. There was a demand for esthetics. He had to change the design concept. Today, we are hearing new terms in the construction field—the same as we are in roofing. Terms such as: folded plates, rolling barrels, and hyperbolic paraboloids. We see designs that look like saddles and spheres and derby hats, and, the old roof concept that it is either flat or sloping is antiquated.

"The single ply laminate roof and the fluid applied roofing systems are taking a relatively small percentage of the American total market today, but there are a million squares involved in that small percentage, and it will be a growing one. Manufacturers are attempting to do everything they possibly can in their producing plants that will minimize the amount of labor in the field. You have to recognize this.

"There are old crafts that are gone, replaced for the most part by the do-it-yourselfer; such as the paper hanger and the residential painter. But these new roofing systems, single plies and fluid applied involve the techniques, the knowledge, and the pride in workmanship that those people had. When you only put on a single ply roof you have nothing but one ply and a piece of tape between you and the outside. Here the paperhanger's technique becomes real important, lines better match.

"If you do not learn these terms and learn these technologies and collectively encourage your employers to get into the new systems, then some other trade is going to take over because they are here; they are necessary, they have to be applied and they have to applied properly by knowledgeable people that care.

"New metals and new plastics are entering the field. You must also learn about them.

"As I look out over this audience, I can see the faces of some employers who learned their trade just like you are learning it. You can have no better background to be a future roofing contractor, a future salesman, a future executive, a comptroller in this industry, than actually being out on the jobs and learning how the materials are applied and knowing how the people whom you work for and with think. There is no limit to where you can go.

"I do not want to sound like a philospher, and I am sure you have heard these things from others—your Sunday school teacher, your minister, and your mother. But, do not ever forget, my friends, a great deal of satisfaction can be derived from a job well done. There is a compensation, and it does not have to be in dollars, for putting out that 'little extra'. Do your homework; do it well; develop a curiosity; come up with ideas. They may be wrong in some cases, but try them. Show initiative. This is what American industry is looking for. Don't let your guide be, 'doing no more than the fellow next to you.' He may be the bad apple in the barrel.

"You can read today of many new theories, some of them partially proven, a few of them totally proven, that affect the performance of our products as they are in place. Read about such things as thermal-shock, sonic booms, shrinking of rooking membranes, lateral co-efficients of contraction and expansion of components, humidity control within buildings, air conditioning, comfort control, condensation, dew ponts, 'C' Factors, 'K' Factors, you have to know a little bit about all of these things.

"You should learn to read specifications to interpret drawings and to avoid mistakes.

"Many apprentices will be foremen and job superintendents. One of the most common things today in our industry is the pre-job conference. Time-time, my friends, is the most precious thing we have, and, that is why we have pre-job conferences with the general contractor, the architect, in some cases the owner of the owner's representative, subcontractors and these people decide how they can do a particular job in the most efficient manner. Where are you going to set up, when are you going to start, who is going to be in your way. You have to be knowledgeable, and you also have to be a salesman to get these things across so that your company can do the best job, render the best service, make the most profit on the contract.

"It will be most helpful to you, I assure, fellows, if in addition to doing your homework you keep in mind some of your personal habits: be neat, clean, shave, be courteous, above all smile and try to place yourself in the other fellow's shoes.

"Our industry today is inflicted to a great extent with a new concept of inspectors and consultants, so-called experts in the field. Owners are depending upon people with partial knowledge to advise them, to damn, to criticize, the things that you and your predecessors have done. You can assist in minimizing these problems with your knowledge.

"Today, it is possible for you to read a great many articles, pros and cons, regarding the importance of drainage in roofing. I believe the majority of opinions in American is that roofs should not be swimming pools. They should not be designed so that they frustrate our wild fowl, who find themselves landing on roof tops rather than

lakes. You can talk about these things. You can see a drain going in the wrong place, you can see a drain pipe running up a column, you can see that there are no provisions made for water to get off of a building. You can report these things. You can talk about them, but first you have to learn why. Learning is so much fun and such a wonderful satisfaction.

"Thanks very much for your time."

The following questions were directed to Mr. Kautz:

Question—from **Mr. McDermott**—"Is there a probable date for purchase time of this new book?

Answer—"Hopefully, two years."

Question—from **Mr. Murphy**—"Will new materials help bring costs down?"

Answer—"Today, costs are high, however, once it is learned it will broaden. If Roofers don't learn it, some other craft will."

Question—from **Leonard Bishow,** JAC, Dayton—"Has Carey Company done anything insofar as movies, slides, etc., for schools? If so, how may they be obtained?"

Answer—"There will be available, maybe next month, five new films concering the Roofing trade, these films are approximately each 15 minutes long. They will be available through the Midwest Contractors Association or National Contractors Association. Carey puts out a film that deals strictly with Carey products and ideas, also we take tour groups through our plant."

Mr. Murphy thanked **Mr. Kautz** for his presentation and introduced the next speaker, **Mr. Joseph A. Mihalka,** Chief of Testing, B. U. C., Employment Service Division, Columbus. Mr. Mihalka spoke on 'Testing & Apprenticeship.'

He stated that O.S.E.S. is dealing in a commodity called people, from youth to the older worker. There are primarily three functions of O.S.E.S. (1) Collect contributions (2) Pay benefits, and, (3) Serve as an employment service. In the past this was relatively simple, however, this is not true today due to specialization, and a lack of communication caused by it.

"Since 1958 there has been an increasing emphasis on education, yet not everyone can go to college. So what becomes of the people who do not have enough education—they must take up a trade. There are presently several information offices that have apprenticeship material available. In Ohio there are 70 units throughout the state where testing can be conducted for potential trainees. The test battery for Roofing was developed in California with 50 apprentices employed at 33 firms and attending three vocational schools for supplemental training. The following factors were found to be significant in predicting success:

(a) **Form Perception**—required on the job to fit materials with spaces laid out on roof and to maintain uniform spacing or overlapping.

(b) **Motor Coordination**—required on the job for measuring and aligning composition shingles, feet or flashing, and in nailing and removing nails, shingles and felt.

(c) **Manual Dexterity**—required on the job in using hand tools skillfully and manipulating roofing materials.

"Ten of fifteen had a poor rating which indicated that approximately 67% would not have been hired had they taken the tests earlier, while 32 of 37 (87%) qualified as good workers. This example is intended only as a helping factor, not a cure-all. Most of these tests are culturally oriented. You cannot judge a person on the score alone, you must be able to judge the individual's reaction and allow for it. In fact, tests are not available for all occupations, and you cannot test a person already employed, for the employers' own purposes. If an employer or union wishes to make use of these tests you may be assured there is no misuse of the testing procedure, the test will be conducted by a qualified consultant who in turn will advise you of the results of the test but will not divulge the actual score. In other words, you will be advised whether or not the person tested would be suitable for the work.

"Please research possibility of using these services through your local offices, particularly Youth Opportunity Centers. Let the centers know of your apprenticeship training program. In closing, Mr. Mihalka stated the important thing in the changing world of work and automation is to keep well informed. In reply to a question by Mr. Murphy, he reviewed the cities where testing is available." (Specific Aptitude Test Batter—B-518 for Roofing trade.)

The third speaker for the day, **Mr. Walter Kunath,** Roofers International Representative, Cleveland, Ohio, was then introduced by the Chairman. After greeting the delegates and guests, Mr. Kunath stated that should a title be required for his message, then let it be called "Responsibility."

"It has long been my opinion that a satisfactory and conclusive apprenticeship training program should be instituted in our entire industry. We need it. Let me add that more and more each day, month and year, our people are becoming aware of this vital necessity, not only in the State of Ohio but throughout the entire area I represent. There does not seem to be a week that passes that I am not questioned as to how to arrange a program in a given area. So, **the interest is there,** however, like in the majortiy of endeavors to improve and progress, it is quite difficult to obtain people who will take the time and spend the effort to bring about the desired results. The dedication to these programs is lacking, because in most cases where a program is instituted every one is eager to carry out their particular duties, at first. Then, after a certain period of time a general laxity sets in and the progress is stablilized. We must somehow generate a feeling in our people to become dedicated to the jobs assigned to them in their programs. Whenever, I use the term 'our people', I am referring to our Roofing and Waterproofing Contractors as well as to the Roofers' committees. Somehow I hope we can find the answer to this problem—not enough time and effort is spent on making the programs work to the utmost.

"However, this problem is showing a great decrease in the State of Ohio, and this has been brought about by the recent adoption of the Ohio State Roofing & Waterproofing Standards, at which meeting I am happy to say I was in attendance. Let me compliment you on the program, and especially the originators of the plan, namely,

Mike Liskany, Emerson Sager, and Tom Wendt, who incidentally is now with the Bureau. My congratulations to all of you, and to the contractors who participated in setting up the original program, along with the Bureau Representatives. In my travels throughout our State, I am happy to report that 6 of our local unions have already acquired schools and two others are contemplating or are in the process of doing likewise. The progress here is exhilarating and indicates, beyond a doubt, that the Roofers of Ohio have shown this interest in bringing about programs in their various localities. This foresight, in addition to the efforts made by the people of Ohio, let me assure you, will bring you many merits and satisfaction. You are doing the job, and I am sure will continue to do so.

"Let us now take a look at what our purposes in an apprenticeship program should be. In my opinion we should **first: Realize we have a responsibility to the Apprentice.** This man, or boy, whichever the case may be, is entitled to all the privileges we can afford him. He should be given every opportunity to complete his course and become the finished product necessary to be an asset to BOTH the Employer and his fellow worker. Programs which detour from this basic idea tend to cause troubles in the plan. If the apprentice is not given an opportunity to learn the mechanics of the trade, step by step, and/or is relegated to a specific job for too long a period, he loses interest and becomes a specialist mechanic that is isolated in that particular position, thereby forcing the man into doing only one type of job and consequently defeating the purpose of the plan.

In addition, our responsibility to the Employer has to be considered. If this isolation of position is brought about because the man is unable to progress in the plan due to his inability to learn the various phases, then he should be demoted or dropped from the program by the Joint Committee without hesitation. Our real purpose is to produce mechanics, not burden the **Employer and Journeyman** with a semi-skilled or unfinished product.

"Let us send the employers the best because we then have a good arguing point at the negotiation tables. The type of people we need, (again I am referring to the qualified mechanic), are brought about by the Joint Committee enforcing the program without showing any partiality, and, by the **Employer and Foreman** on the various jobs seeing that the Apprentice is moved to the various jobs in the Roofing trade so **he is given the opportunity to learn all phases of the trade.**

How do we get apprentices interested in the Roofing trade? This has been a bone of contention for too long a period. My opinion is that it is absolutely necessary to go to the high schools and inform the students that are still undecided as to what they will do when they leave school that they can make a good living in an extremely interesting and important operation in the construction industry, by becoming a roofer apprentice. These young men should also be informed that many of the local unions now have fringe benefits which will also be available to them. We must **give of our time** to acquire these young men by selling them the idea of becoming a roofer.

"**Tell them** of the various types of roof construction, including the new materials now being applied, because today we are not 'hot

tar roofers' only. We now have many cold applications because of the new methods of roof construction coming into our field.

"It may also be advisable to make the starting rate of wages attractive enough, without of course, getting out of line in comparison to the journeyman rates. Set up the ratio to journeyman properly so that he can be assured of employment for a reasonable length of time. **However, and above all,** give him the opinion that he will be learning a trade in which he will be given a fair and honest chance to complete the program. All too often I hear young fellows making remarks, such as—'to heck with that job, all they want you for is the rush periods and then they forget all about you.' Do not let them say this about us.'

"These are our responsibilities and we must accept them. I suppose some of you are wondering what the Roofers International is doing to assist you in apprenticeship programs. Our National Apprenticeship Standards have been available from the General Office since their completed revision at the start of the year. Also, we have now finished a more complete training manual which is in the printing stages and will be available shortly. These new manuals may be obtained through requests received by the General Office. Last, but not least, personal assistance may be obtained through your request to the General Office.

In conclusion, I would like to say your conference theme 'A Sound Investment for the Space Age' is very appropriately titled, as this is the Space age, and we will have to adjust to it as we have had to adjust to the various changes in the past. However, if per chance we do start constructions on the moon or other planets, I hope our General President does not give me the first assignment on any particular problems that may arise there. Again, I thank you for inviting me to be with you and giving me the opportunity to speak to you. May best wishes to you for continued success, progress, and prosperity in your endeavors."

Again, Chairman Murphy thanked all the speakers for their information, and for giving their time to address this meeting.

At this time, **Mr. Gabel** briefly interrupted to introduce **Mr. William Webb,** Regional Director, Bureau of Apprenticeship and Training, U. S. Department of Labor, who had entered the room. Mr. Webb was warmly welcomed and his help in setting up the various programs was acknowledged by the Co-Chairman, Mr. Sager.

The meeting was opened for questions.

Question: by **Mr. Tower**—"Is there a point in the testing program, in the beginning for the above-average student?"

Answer: by **Mr. Mihalka**—"Yes, if we have this situation arise, a personal interview is first given."

Question: by **L. Bishow**—"Was a validation study made of the apprentices in California who participated in the testing."

Answer: by **Mr. Mihalka**—"Not as yet, however, it is hoped that with the addition of research people a long term follow through program will be established."

Following this, a brief general discussion was held, and the meeting was adjourned at 4:15 P.M.

SHEET METAL TRADES

Wednesday **October 27**

CO-CHAIRMEN

Richard Rigg, Representing, Riggs Sheet Metal and Roofing, Dayton, Ohio

Ralph Taylor, Business Agent and Chairman of Sheet Metal Workers Joint Apprenticeship Committee, Dayton, Ohio

SPEAKERS

Dr. Robert M. Reese, Department Head, Teacher Education Service, Trade and Industrial Education, The Ohio State University, Columbus, Ohio

Edward Hudoba, Secretary, National Joint Sheet Metal Industry, Minneapolis, Minnesota

E. T. Forsyth, Supervisor, Coated Steel Products, Armco Steel Product Corporation, Middletown, Ohio

Dr. William L. Ramsey, Superintendent of Schools, Penta County Vocational School, Perrysburg, Ohio.

CONSULTANTS

George Kosbab, Representative, Trade and Industrial Education Service, The Ohio State University, Columbus, Ohio.

Earl A. Shobe, Representative, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cincinnati, Ohio

Dr. Robert M. Reese, Department Head, Teacher, Education Service Trade and Industrial Education, The Ohio State University, Columbus, Ohio.

REGISTRATION AND RECEPTION

William Budde, Representing, Budde Sheet Metal Company, Dayton, Ohio

Dalous Phillips, Business Agent, Sheet Metal Workers Local Union No. 224, Dayton, Ohio

SECRETARY

Melbourne F. Wargo, Business Agent, Sheet Metal Workers Local Union No. 65, Dayton, Ohio

SHEET METAL TRADES

(First and Second Sessions)

This session was called to order by **Ralph Taylor,** Business Agent and Chairman of Sheet Metal Workers Joint Apprenticeship Committee, Dayton, Ohio, at 9:20 A.M. There were 33 in attendance.

The speaker introduced was **Dr. Robert M. Reese,** Department Head, Teacher Education Service, Trade and Industrial Education, The Ohio State University, Columbus, Ohio, whose topic was "Setting Up and Operating A State-Wide Apprenticeship Contest".

Dr. Reese stressed prestige in education and communication to the public in getting good applicants. As values in the apprentice contests, awards are a vital thing for all participants, thereby rewarding all people not build just the top people. He stressed the importance of local, state and final committees, rules and procedures. In starting, the first thing is a sponsoring agent; second is a Location; third is Advance planning in order to acquire facilities; fourth is a Director; and fifth, Vital things necessary for promotion such as:

1. Funds Source
2. Selection of Judges
   a. Management
   b. Labor
   c. Education
3. Content
4. Supplies
5. Cost—Procedures—Materials—Etc.
6. Lunches—Banquets—Awards—Program
   a. Invite Guests & Publicity
   b. Location of Banquet
   c. Housing & Applicants
   d. Test Content
   e. Preparation of Meetings (Two a Year)
   f. Schedules of Contest
      1. Meeting of Judges
      2. Grading Procedures
      3. Records of Winners
      4. Preparation of Certificates
7. Do not start such a program until the industry is properly prepared
8. Selling a local committee on the contest
9. Proper location

Dr. Reese concluded with the final remark "POORLY RUN CONTESTS CAN DO MORE HARM THAN NO CONTEST AT ALL."

Questions—There were various questions of clarification asked and answered. Chairman Taylor thanked Dr. Reese for his remarks and then introduced **Mr. Edward Hudoba,** Secretary, National Joint Sheet Metal Industry, Minneapolis, Minnesota.

Mr. Hudoba outlined problems and steps necessary in a contest:

1. The National Committee selects the project based on experience of the apprentice.
2. Information sheet covering the facts including his employer.
3. Instructions regarding the project.
4. Questionnaire concerning the fitting and other items concerning the industry.
5. The fitting itself.
6. Regimentation and compulsory participation is necessary.
7. Caution—Human element should be given consideration.
8. Time limits are good.
9. Check sheets for judges to determine the job accuracy.
10. Publicity after the contest.

State contests are now being conducted in Connecticut. Various questions were asked of Mr. Hudoba with a further exchange of information on contest operation. Chairman Taylor asked for further questions; there were none.

Chairman **Taylor** then asked for a report from **Earl Shobe,** Representative, Bureau of Apprenticeship and Training, U. S. Dept. of Labor, Cincinnati, Ohio, which was given as follows as of January 1, 1965:

280 apprentices active

Registered	167
Reinstated	1
Cancelled	28
Completed	66
Lost To Armed Service	4

Active as of 10-1-65 ..... 350—A gain of 70 in 10 months

Some questions were raised at this point regarding the use of apprentices on federally financed construction. A synopsis of the information presented at this point is appended as, ATTACHMENT "A".

Mr. George Kosbab, Representative, Trade and Industrial Education Service, The Ohio State University, Columbus, Ohio, was introduced and gave a report on the progress of the achievement testing program for Sheet Metal Workers being developed by the V. E. Service of Ohio State and commended the members of the Ohio State Sheet Metal Workers JAC who had assisted in the program.

******

Mr. Richard Rigg, Representing, Riggs Sheet Metal and Roofing, Dayton, Ohio, opened the afternoon session at 2:00 P.M. 32 persons present.

Mr. Ted Forsyth, Mr. J. H. Maynard, and **Mr. Beck** from Armco were introduced and showed an education film on steel manufacturing

and slides on zinc coated products. Also film on fire rating in ducts, steel, fiber glass, aluminum and asbestos.

These films were educational, informative, generally interesting, and were well received by the group. Considerable discussion on these films was carried on during a break period between this phase of the program and the one to follow.

The next speaker introduced was **Dr. William L. Ramsey,** Superintendent of Schools, Penta County Vocational School, Perrysburg, Ohio, whose topic was "The Area Vocational Schools Role in Apprenticeship and Skilled Trades Training."

Dr. Ramsey related his early experience in labor. Also effects of school on industrial training. Nineteen school districts for this one vocational school. Three divisions—Vocational High, Technical College and Adult Education. He also pointed differences in various programs programed to meet the needs of area being served.

Dr. Ramsey was a very dynamic speaker, well versed in his topic and made a very dramatic presentation of the close working relationship that is possible between vocational education and local industry and how vocational education can be instrumental in encouraging industrial growth in an area.

Since selection of apprentices are of vital importance in the operation of any apprenticeship program, and in order for you to determine if your plan meets the selection procedure as outlined in the plan adopted by the Ohio State Apprenticeship Council, a check sheet is appended as ATTACHMENT "B". This check sheet is not expected to be answered and returned but is merely intended to provide you with the necessary information to determine the status of your program.

ATTACHMENT "A"

STATE OFFICE
U. S. DEPARTMENT OF LABOR
BUREAU OF APPRENTICESHIP AND TRAINING
COLUMBUS, OHIO

EMPLOYMENT OF APPRENTICES ON FEDERALLY ASSISTED CONSTRUCTION PROJECTS

In addition to the proviso that there must be an official wage determination, including appropriate apprentice classification and rates, contractors must register their apprentices and adhere to certain other regulations published by the Secretary of Labor under Regulations, Part 5. These regulations establish Labor standards provisions covering federally financed and assisted construction for the guidance of administrative and enforcement officials of federal agencies.

On January 18, 1956, Assistant Solicitor of Labor, John J. Babe addressed the following memorandum of interpretation to W. F. Patterson, Director of Bureau of Apprenticeship, concerning problems related to the employment of apprentices on Federal or federally assisted construction projects:

INFORMATION FOR CONTRACTORS AND UNIONS

1. Summary of Regulation governing apprentice employment on covered construction.
2. Procedure for registration time limits.
3. Backdating of apprentice agreement approvals and registrations not recognized.
4. Wages to be paid unregistered apprentices.
5. Disproportionate employment ratio.
6. Wage determination provisions.

APPRENTICE REGULATIONS

Reg., Part 5, affecting Apprentices provides:

Sec. 5.2(3). The term "apprentices" means persons employed in a bona fide apprenticeship program registered with the State Apprenticeship Council which is recognized by the Federal Committee on Apprenticeship, U. S. Department of Labor, or if no such recognized Council exists in a State, in a program registered with the Bureau of Apprenticeship and Training, U. S. Department of Labor;

Sec. 5.5(a)(4). Apprentices will be permitted to work only under a bona fide apprenticeship program registered with a State Apprenticeship Council which is recognized by the Federal Committee on Apprenticeship, U. S. Department of Labor; or, if no such recognized Council exists in a State, under a program registered with the Bureau of Apprenticeship & Training, U. S. Dept. of Labor.

Sec. 5.6(2). In addition to the examination of payrolls and affidavits required by paragraph (d) of this section, the Federal Agency shall cause investigations to be made as may be necessary to assure compliance with the labor standards stipulations required by the regulations contained in this part and the applicable statutes listed in Sec. 5.1. Projects where the contract is of short duration (6 months or less) shall be investigated before the work is accepted, if feasible. In the case of contracts which extend over a long period of time, the investigation shall be made with such frequency as may be necessary to assure compliance. Such investigations shall include interviews with employees and examinations of payroll data to determine the correctness of classifications and **disproportionate employment of laborers, helpers, or apprentices.** Complaints of alleged violations shall be given priority and statements written or oral, made by an employee shall be treated as confidential and shall not be disclosed to his employer without the consent of the employee.

VALID REGISTRATION—LAPSE OF TIME

The employment of bona fide apprentices at wage rates determined for apprentices by the Secretary of Labor is permitted by Regulations Part 5. Since the Regulations require that for employment an apprentice must be under a bona fide apprenticeship program registered with State Apprenticeship Agencies or the Bureau of Apprenticeship & Training, and since the requirement of each program is individual apprentice registration or indenture, we will consider a worker for enforcement purposes to be a bona fide apprentice from the date of indenture execution provided the date of approval by the craft's Joint Apprenticeship Committee and the State Agency regis-

tration date are within 30 days (30 days) of the indenture's execution, and futher provided that State Law does not require otherwise. If the State Agency's approval or registration is not within 30 days of the date of the execution of the indenture, then the Committee's approval date will be accepted provided the State Agency approves or registers the indenture within 30 days of the Committee's approval date. In the event these periods are not observed the State Agency registration date will control.

In instances where State legislation requires individual indentures registration or approval as a condition precedent to bona fide apprenticeship training, we will consider such approval or registration date by the State official or his duly designated representative as conclusive evidence of bona fide apprenticeship training.

In instances where individual registration is made directly with a Bureau of Apprenticeship & Training Representative who has authority to execute the indenture and State Agency approval is not required, the Bureau of Apprenticeship & Training date will be accepted as authoritative.

BACKDATING—CREDIT FOR EXPERIENCE

Back dating of approvals by the Joint Apprenticeship Committee or of registrations by the Registration Agency is not acceptable in determining the actual date of registration controlling permission to employ apprentices at sub-journeyman wages on covered contracts under Regulations, Part 5.

Previous work credit granted in a registration will be accepted in determining the wage rate to be paid to a registered apprentice on a federal or federally assisted construction job covered by Reg. Part 5. However, previous work credit granted an apprentice on the term of apprenticeship will not be recognized for the purpose of backdating the apprenticeship. This is intended to avoid the device of paying sub-journeyman wages on covered jobs for periods of employment prior to registration.

Example: An apprentice is registered on January 1 and given credit at that time for 2 years' prior work experience. In determining the wage rate which he must be paid on covered jobs after January 1, the apprentice is entitled to the wage applicable to the next step following the 2 year level. This gives him credit for his 2 years' experience.

The apprentice's employment before January 1, while creditable for previous work credit on the term of apprenticeship cannot be considered in determining the proper wage rate to be paid before registration on January 1. The alleged apprentice is in no covered jobs prior to January 1. The journeyman's rate would be applicable to such employees doing part of the mechanic's work prior to January 1.

DISPROPORTIONATE EMPLOYMENT—RATIO

In the employment of apprentices on covered federal or federally assisted contracts to conform with Regulations, Part 5.6(e), providing against disproportionate employment, recognition will be given to acceptable prevailing area practices respecting ratios of apprentices to mechanics on individual construction projects. To meet the

requirements of these Regulations, the allowable ratio of apprentices to skilled workers permitted to work on a covered project or job shall not be greater than the ratio allowed the contractor as to his entire work force.

Example: A contractor has 100 journeymen and is allowed 10 apprentices the **ratio** is thus 1 apprentice to 10 journeymen. The contractor, on covered jobs for enforcement purposes, is allowed to employ 1 apprentice for each 10 journeymen or any fraction thereof. No apprentice will be allowed unless there is at least 1 journeyman on the job. After 10 journeymen are employed, the contractor may use 2 apprentices for 20 journeymen or any fraction thereof. After 20 journeymen are employed, he may use 3 apprentices for 30 journeymen or any fraction thereof, and so on up to his limit of 10 apprentices.

In State Council and Joint Committee arrangements, the craft—collective bargaining ratios will be accepted. In Apprenticeship programs where collective-bargaining ratios are not determined, the prevailing area practice as to ratios will be determined by the office of the Solicitor.

Where bona fide apprentices on covered Government or Government-assisted contracts are employed in excess of the proper ratio, those employed in excess of such ratio will be entitled to the journeyman's rate for each day of disproportionate employment on the project. Allowances will be made for journeyman absenteeism due to circumstances beyond the contractor's control. These matters will be decided on a case-to-case basis by the Solicitor's office.

WAGE DETERMINATION REGULATIONS

The Secretary of Labor, through the Solictor's Office of the U.S. Department of Labor, predetermines the prevailing wages for construction mechanics, laborers, and apprentices employed on federal or federally aided construction projects. Details of these regulations will be found in Part 5, Title 29, Subtitle A, Code of Federal Regulations, covering labor standards provision applicable to public contracts let under the following Acts:

1. Davis-Bacon Act., as amended—Applying to new construction alteration and repair (including painting and decorating) contracts of over $2,000 let directly by a Federal Agency.
2. National Housing Act, as amended (FHA)—covering multi-type dwellings for rental purposes. Individual homes are not included, except when constructed by co-operative or FHA projects of 12 or more homes. Insured housing on military installations is also covered.

ATTACHMENT "B"

In order for you to determine if your plan is in compliance with the Ohio State Plan on the selection of apprentices and if you would be able to justify your position on selection if you were faced with a

challenge of discrimination you should be able to answer Yes to the following questions.

1. Does your plan contain a non-discrimination clause in accordance with the Ohio State Plan, Section 6, Paragraph A?
2. Is the selection of apprentices based on qualifications alone and is there a provision for ranking in accordance with the Ohio State Plan, Section 4, Paragraph A?
3. Does your plan provide for the proper public notification and does you plan provide for a full and fair opportunity for application and for notification of openings in accordance with the Ohio State Plan, Section 5, Paragraph A?
4. Are you using objective standards which provide for a uniform procedure for all applicants in accordance with the Ohio State Plan, Section 4, Paragraph C?
5. Does your plan provide for review and the retention of records for at least two years in accordance with the Ohio State Plan, Section 4, Paragraph D?

If you are unable to answer Yes to the above questions you may find that you will be unable to adequately defend yourself against a charge of discrimination in your selection. If you need help in bringing your program into compliance you should contact the local apprenticeship and training representative in your area with whom you deal.

GENERAL MEETING

Wednesday **October 27**

EVENING SESSION

The main general meeting of the Fifteenth Annual Ohio Apprenticeship Conference featuring the keynote speaker commenced with a banquet at 6:00 P.M. in the Grand Ballroom of the Dayton-Sheraton Hotel.

Following the banquet, **Mr. Gerald D. Biddle,** Member, Ohio State Apprenticeship Council; International Representative, Skilled Trades Department, U.A.W., C.I.O., Toledo, Ohio, opened the meeting by welcoming all the conferees to the 15th Annual Conference. He expressed appreciation to all the conferees for participating in the meeting so freely thus contributing to a most successful conference —especially to those who so willingly accepted invitations to be an active program panel participant.

Mr. Biddle then introduced **Mr. Michael Liskany,** Executive Secretary, Building Trades Council of Dayton, Dayton, Ohio—the Toastmaster for the evening. After acknowledging the introduction Mr. Liskany introduced the following guests who were seated at the speaker's table:

Bryl R. Shoemaker, Director, Vocational Education, Ohio Department of Education, Columbus, Ohio.

Elmer W. Kizer, Former Principal, Hughes High School, and Member Ohio State Apprenticeship Council, Cincinnati, Ohio.

Theodore Ethington, Deputy Labor Commissioner, Department of Labor, Lexington, Kentucky.

Charles W. Danis, Manager and President, B. G. Danis Company, Dayton, Ohio.

Gerald D. Biddle, Member, Ohio State Apprenticeship Council, International Representative, Skilled Trades Department, U.A.W., C.I.O., Toledo, Ohio.

William O. Walker, Director, Ohio Department of Industrial Relations, Columbus, Ohio.

Glen Schimpf, American Association General Contractors, West Central Ohio Chapter, Dayton, Ohio.

William C. Webb, Regional Director, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio.

John F. Kostyo, Executive Secretary, Ohio State Apprenticeship Council, Columbus, Ohio.

Mr. Liskany then introduced the first speaker, **Mr. W. O. Walker,** Director, Department of Industrial Relations, State of Ohio, Columbus, Ohio.

Mr. Walker spoke as follows:

"Mr. Liskany, Mr. Biddle, Mr. Kostyo, Delegates, Friends, Ladies and Gentlemen.

"It is a pleasure for me to welcome you to this, the Department's 15th Annual Apprenticeship Conference.

"The Department of Industrial Relations, with its many unrelated Divisions, however, all of them dealing with employment and working conditions, is glad to have as one of its responsibilities, the Ohio State Apprenticeship Council.

"We are further pleased to have as the Executive Secretary of the Council, **John F. Kostyo.** He is thoroughly dedicated to this work and brings to it, the talent and interest that has made our Council a model for the nation.

"We have met here for this 15th Annual Conference, at a critical period in Apprenticeship Training and Vocational Education.

"Never before in the history of the nation, has Federal and State governments made available so much money for training and retraining of young and old prospective workers.

"The statistics, as to the records in our Council will show, indicates that we now have a record number of enrollees in the various plants in the State.

"Yet, despite this big increase in trainees, there is a shortage of potential workers for the jobs available.

"There is also a cry from the ranks of the discriminated against for an opportunity to enter the mainstream of American employment.

"Then there is the rank of those who, because of automation, are being displaced and thereby forced into the ranks of the unemployed or the potential re-trainees.

"We can no longer then, close our eyes to the plight of those in need. We must find some way to help those who face this crisis. To open up training opportunities for them.

"The tug-of-war between business and labor over the factors that constitute the cost of production, neither side can afford to lose sight of the final obligations of both. Business must prosper and labor must be paid a living wage. The welfare of the whole nation is at stake in this conflict.

"There are some in the labor market who look with disdain upon training program of any kind. Most of these men themselves came up through the ranks the hard way.

"There are some in the training field who feel that early exposure to job training is not desirable. Therefore, they have hamstrung the whole field of youth employment with restrictions and do's and don'ts, that today, almost make it impossible for young people to start developing good work habits before idleness leads them into bad social habits.

"If Thomas Edison had been born during the last 25 years, the world would never have been the beneficiary of his genius. First, he would have been judged an incorrigible; then a school drop-out. He could not have gotten the jobs that enabled him to develop his own talent.

"The FBI reports show that crime among young people is continuing to rise at an alarming rate. This proves the soundness of that old saying that 'Idle hands are the Devil's workshop.'

"Labor unions are going to have to broaden the base and scope of their training programs. Scarcity of workers is not good economics. Lack of adequate training opportunities is the responsibility of government.

"We will not advance the cause of the industrial development of this nation by closing our eyes to these problems. We must not permit selfishness on the part of either business or labor to stymie an enlightened approach to solutions.

"The youth of America are no longer waiting. They are restless—they are on the move.

"We either prepare a way for them, or else they will run over us, and, in their haste, wreck the institutions we have so laboriously built, and the government we cherish so much.

"When the great liberal Thaddeus Stevens died, one of his colleagues said of him, 'All his life he held the outpost of thought.'

"Let this be said of those of us who are, of necessity, concerned with the training of the future workers of tomorrow and with the problems of the displaced of today.

"All is not well in our house. We are only kidding ourselves if we close our eyes to realities.

"I am glad you ladies and gentlemen have thought enought of our program and our operations in the field of apprenticeship training to come to this conference. I hope your attendance here will be profitable.

"We are grateful to each of you who have contributed to making up and carrying out this program.

"Governor James A. Rhodes has dedicated his whole administration to the industrial development of this State. He is now preparing to leave for Europe, next week, to try to sell the advantages of Ohio to European business firms.

"You can rest assured that Governor Rhodes will cooperate with us in our program of youth training. In this, I hope, we will move with greatest speed."

Following Mr. Walker's presentation, Mr. Liskany introduced **Mr. Charles W. Danis,** Manager and President, B. G. Danis Company, Dayton, Ohio.

Mr. Danis spoke as follows:

"Mr. Biddle, our Chairman, Mr. Liskany, our Toastmaster, Mr. Kostyo, Executive Secretary of Ohio State Apprenticeship Council, Conferees, and Guests.

"When Mr. Kostyo invited me to address this Fifteenth Annual Ohio State Apprenticeship Conference, I was surprised because apprenticeship training is an educational function requiring that a speaker for this conference be a promoter—a publicist—an organizer—a diplomat—a person experienced in state and federal laws—and, most of all, that he be a trained professional, proficient educator—all of which I am not.

"I am alarmed because this address puts me on the spot—a contractor speaking on apprenticeship to people who specialize in training apprentices.

"Well, I accepted Mr. Kostyo's invitation and I am pleased and grateful for this opportunity to present some opinions and views on apprenticeship training as it pertains to industry in general, and to the construction industry in particular in the State of Ohio. My address will center around the need for training people. The subject matter is meant to be applicable to the apprenticeship program, in general.

"Both you and I are thoroughly aware of the tremendous need for training men for the industry of tomorrow—for my industry and yours. The theme of this conference — "APPRENTICESHIP — A SOUND INVESTMENT FOR THE SPACE AGE" — suggests the ever-increasing need for skilled craftsmen. Are we aware of all the 'Whys and Hows' behind the need?

"We are told over and over again of the population explosion. We can see the continual introduction of new methods, materials and products, which calls for training and re-training of production workers. We, in the construction industry, can see the stimulation caused by urban renewal. We are working with the ever-changing, constantly evolving laws affecting the people of this country—all of the people, negro and white, Indian and Puerto Rican, rich and poor, white or blue collar. That horrible word 'automation' . . . fewer jobs on the production line, but higher pay for those with the greatest skill, and a tremendous increase of jobs in the service industries . . . all of these variables will influence our planning in training and re-training craftsmen for all industry—construction included. These important factors must be considered on a local level—right here in Ohio.

"There are 785,000 more people living in Ohio today than in 1960 . . . Industrial Expansion is creating the need for more skilled workman. It is estimated that 5.2 million new job openings will be available in the skilled occupations in the United States between 1965 and 1975. I have reached the inevitable conclusion that we have failed to supply sufficient apprentice training in the past and that we will not have sufficient apprentices in training in the next ten years unless we undo some of the unspoken restrictions that have existed, and do exist today, in the path of our children who are available to fill this need.

"Authorities in apprenticeship training believe that the United States should produce 250,000 skilled craftsmen per year just to replace our normal attrition losses through death and retirement. Currently there are around 170,000 apprentices being trained per year. A labor department study of manpower needs for 1975 forecasts 'A rising demand for workers with a high level of education and training and a lessening of opportunities for the unskilled and uneducated.' The trend toward early retirement will accentuate the problem even further.

If we are having the problem of skilled craftsmen with the retirement age at 65, you can well imagine what problems will arise as the retirement age is lowered to 62 and 60.

"Labor and mangement together must continue to provide the apprenticeship program. The local schools must provide the incentive

and interest in the skilled trades in order that qualified applicants will be available to enter the apprenticeship programs. The youth of today must be informed of the chances of success in being a skilled craftsman and the personal satisfaction of accomplishment which goes with working at a skilled trade. We must promote the need, sell the opportunity, and show to our high school students the satisfaction that is inherent in a job with an acquired skill. **A job recruitment programs at the high school level is a must.** We must face these problems now on a local basis and prepare to sell our product in competition with college education, before it is too late.

"Several years ago we should have somehow foreseen the change in Ohio's corporate tax laws and the obvious invitation to new industry. We should have anticipated our present-day needs for skilled workers in industrial construction. Our supply of skilled workers is exhausted today! We could have been ready for the almost overnight expansion of certain communities here in Ohio—their residential as well as their commercial and industrial growth.

"Our apprentice training programs should have been planned and manned ahead of time to prevent, for example, the necessity of having to call other areas for sufficient mechanics to man our jobs . . . they are not there either. We are using specialized mechanics in jobs where their skill does not meet the needs of the job.

"Now, you might say that I am presenting hypothetical examples —things that **could happen,** but **have not yet,** in your local area. Gentlemen, I can cite projects in quite a few areas where these manpower problems are having to be solved. I believe we need the foresight and appropriate planning in our apprenticeship training to prevent these problems from arising. Our programs must be flexible enough to cope with an industry that is always changing. We must be able and ready on a moment's notice to amend or supplement our standards, procedures, rules and regulations. We must be knowledgeable enough to introduce new subject matter into our programs' curriculum. **We must be able to intelligently indenture young men to our programs . . .** know when to indenture ten boys or know when thirty boys are really needed in a new class. We must strive constantly to accurately predict apprentice drop-outs and draft losses, and design our programs to adequately fill our needs.

"Let us look backwards for a while—

"Every man and woman in this room is the son or daughter of an immigrant to this country. When your forefathers and mine arrived, they joined the large group of unskilled workmen as laborers on the great projects - - - the canals, the railroads that opened up this country.

"The immigrants married, raised a family and the second generation was assimilated into the culture of this country and they and their families became acceptable to those who had preceded them. The children of the second, or perhaps the third generations, through the desire of the parents, began to find their way into the high schools, the colleges and universities . . . through this process into the white collar group instead of into the skilled crafts.

This process has accelerated until, at this date, the previous source of our good, smart, intelligent skilled craftsmen has dried up. They are not here any more . . . they are in college.

"There is, however a wealth of material for skilled craftsmen left in this country in a group that has been assimilated or accepted in the scheme of things as they exist in our skilled crafts.

"I am speaking of our large negro population. This group is now going through 'Operation Bootstrap—the beginning of the process of acquiring a desire for the educational and job opportunities that your grandparents, your parents, and you and I, as parents, have for our own children.

"It is from this group that you will find the next generation's surge into the skilled craft category. Open the doors of opportunity to them . . . do not lessen the job requirements that they must meet . . . provide the apprenticeship training that enables them to compete with all of us on an equal basis. To each of you I urge that you direct your efforts to remove any artificial barriers that keep any qualified individual from a skilled craft opportunity. We need the impetus that they will provide to meet the job requirements 1965-1975.

"The whole point of my message is that our apprentice committees can no longer operate according to past procedure or under the conditions of out-dated standards and practices. Our needs won't permit it. Each supporting agency and each individual committee member must be constantly watching for changes, must develop the skill to recognize how a change could affect the needs of the industry and, most important, be capable and ready to make the necessary changes in training to counteract industry, community and economic changes.

"I feel, and most of my contractor colleagues feel, that Ohio probably more than any other state has established an apprenticeship training structure which enables it to stay abreast of the needs of the construction industry, but only if local prejudices, conservative provisions to provide full employment and other factors which resist enlarging our programs, are discarded. Our Ohio State Apprenticeship Council, our State and Local boards of education, the U. S. Department of Labor's Bureau of Apprenticeship and Training and local Joint Apprenticeship Committees are doing a really fantastic job for us . . . and believe me, gentlemen it is recognized and appreciated. We must constantly strive for improvement . . . ther can be no 'treading water' in this business. The need for skilled craftsmen in the American system of competitive enterprise will sink us unless we pull our feet out of the quicksand of 'inaction.' ".

Mr. Liskany stated, "I am happy to be a part of this conference and to be a part of the apprenticeship training program." He then turned the meeting over to **Mr. Gerald Biddle,** who expressed appreciation and thanks to **Mr. Liskany,** the Toastmaster, for a job well done, to **Mr. Danis,** the featured speaker, for his fine presentation and to **Director Walker** for his encouraging words of welcome.

Mr. Biddle continued: "We want to thank the Ohio Construction Council for sponsoring the Hospitality Welcome Night on Tuesday evening. Everyone who attended this event was deeply gratified and appreciative of this hospitable and courteous gesture. We of the Ohio State Apprenticeship Council extend a special word of thanks to the individual members of the Ohio Construction Council as a small token of our deep appreciation."

Appreciation and thanks was also expressed by Mr. Biddle to the Federal Bureau of Apprenticeship and Training for the cooperation and assistance they rendered in the conference and in continually furthering the progress of apprenticeshiip in Ohio. Mr. Biddle asked the BAT representatives in the room to stand and be recognized.

Mr. Biddle: "Would the representatives of the Trade and Industrial Education Service please stand. We want to thank you also for your cooperation and assistance that you have always given to the Council through the years of its existence.

"And finally, we also extend thanks and appreciation to the staff of the hotel who have handled the many conference details so efficiently while being subjected to the hazards of a renovation program which, as you know, is currently underway at this hotel.

"As a closing comment, may I call your attention to the meetings tomorrow and again urge you to be prompt."

The evening session was declared adjourned at 8:00 P. M.

INDUSTRIAL MAINTENANCE TRADES

Thursday **October 28**

CHAIRMAN

Robert J. Usher, Chief Training Branch, N.A.S.A.—Lewis Research Center, Cleveland, Ohio

PANEL MEMBERS

E. R. Elkins, Director, Skilled Trades, U.R.W. International Union, Akron, Ohio

Lester Irvin, Chairman, Skilled Trades, I.U.E. (GMC) Plants, Dayton, Ohio

J. J. Eyre, Manager, Eng. Squadron & Apprenticeship Program, Goodyear Tire & Rubber Company, Akron, Ohio

John P. Heinz, Apprentice Coordinator, Ford Motor Company (Foundry & Engine Division), Cleveland, Ohio

Willard Thuma, Labor Relations, Frigidaire Div.—G.M.C., Dayton, Ohio

CONSULTANTS

Dr. D. H. Price, Trade and Industrial Education, University of Cincinnati, Cincinnati, Ohio

Ralph C. Neal, Apprentice Training Consultant, Ohio State Department of Education, Columbus, Ohio

William J. Kacvinsky, Representative, Bureau of Apprenticeship & Training, U. S. Dept. of Labor, Cleveland, Ohio

Richard Swain, Representative, Bureau of Apprenticeship and Training, U. S. Dept. of Labor, Detroit, Michigan

SECRETARY

Mrs. Ray Lesniok, I.U.E. Local 707—AFL-CIO, Cleveland, Ohio

INDUSTRIAL MAINTENANCE TRADES

Second Session

The meeting was called to order at 9:00 A.M. by **Robert J. Usher,** Chief, Training Branch, N.A.S.A., Lewis Research Center, Cleveland, Ohio, who introduced the panel members and also Dr. Price from the University of Cincinnati. Mr. Usher noted that last year the discussion was how to standardize the apprenticeship program. He went on that at a meeting in May of 1965 the panel members discussed the need to standardize maintenance trades. Mr. Usher stated that he would like to get the feeling of the delegates towards the establishment of a Joint Apprenticeship Council. Mr. Usher then introduced the first speaker **Mr. Lester Irvin,** Chairman, Skilled Trades, I.U.E., (GMC) Plants, Dayton, Ohio.

Mr. Irvin: " I feel that a joint committee is needed. We discussed in Columbus that minimum standards are needed in industry. Once this has been established throughout the state, and a man has gone through a recognized apprentice program with a little orientation, he may perform his craft in any industry. Through organization of this committee, which is the first of its kind on a national level, we will be able to have better apprenticeship programs. I would like to give Mr. Kacvinsky the credit due him for the difficult job of coordinating this program."

Mr. E. R. Elkins, Director, Skilled Trades, U.R.W., International Union, Akron, Ohio, spoke: "The Washington level should be the central information point for minimum standards and standardizing job training. These programs must be acceptable to all unions to standardize and identify common trades. This is important to organizations affiliated with the I.U.D. There will be a difference in programs, but minimum standards must be uniform with flexibility to maximum standards. We are trying to work out a reciprocal journeyman card agreement, but before this can be done, the apprentice program must be standardized. This must be accomplished in the near future if we are to move forward with apprenticeship training. This will be beneficial to both unions and companies.

Mr. Wallace Garvin, Apprentice Committee, Spicer Unit Local 12, UAW AFL-CIO, Toledo, Ohio: "What can be done to get greater participation from companies in apprenticeship training who are not willing to participate?"

Mr. Usher said "That is true. Many firms will advertise in newspapers for skilled help, who have gone through apprenticeship programs elsewhere, but do not participate themselves in apprenticeship training."

Mr. Ray Lesniok, Representative, I.U.E., Local 707, Cleveland, Ohio: "We in the Cleveland area recognize that what the two previous speakers said is true. In the Cleveland metropolitan area the A.I.C. was established, and its advisory committees duties are to develop apprenticeship opportunities in this area. This committee suggested

that there be a seminar for school counselors to acquaint them with our program. This seminar will be held November 16, 1965. I further feel that we need a similar seminar for industry, to open the door for apprenticeship programs in industry. I feel that this must be a team effort if we are to accomplish our aims and goals which will be beneficial to the whole country.

Mr. Usher: "Let me explain the function of the A.I.C. further. The A.I.C. forms teams who go out to high schools with speakers and film, to inform students of the opportunities within apprenticeship training. Also to familiarize them with the proper curriculum that is required for these crafts."

Mr. William Kacvinsky, Representative, Bureau of Apprenticeship & Training, U. S. Dept. of Labor, Cleveland, Ohio: "There is an apprenticeship information center also in Cincinnati. Columbus, Toledo and Dayton are being considered for A.I.C."

Mr. Ralph C. Neal, Consultant for Apprenticeship, Trade & Industrial Education Service, Ohio Department of Education, Columbus, Ohio: "The Department of Education reaches road blocks with some high school counselors because they are not familiar with the needs in this area. We commend Cleveland for their action in this field."

At this point an invitation was extended to Mr. Neal to attend the Seminar being held in Cleveland on November 16, by the A.I.C. He accepted and said he would attend.

Mr. Usher: "We will now discuss Related Training for Maintenance Crafts." He then introduced **Mr. J. J. Eyre,** Manager, Engineer Squadron & Apprenticeship Program, Goodyear Tire and Rubber Company, Akron, Ohio.

Mr. Eyre: "In May we discussed problems with related training in classrooms. I feel that we must have more maintenance trades classes. For example, a plumber in the building trades can get classroom training, but the industrial plumber has no such facilities. We have the problem of text books applicable to maintenance trades. The panel reached a tentative agreement that there is a need to provide course materials for maintenance trades. We are seeking recommendations. We are planning a meeting in early 1966 to discuss this problem."

Mr. Pollock—Toledo, Ohio: "We do not have enough textbooks for the apprentices to learn their craft. We need professional teachers in the school to teach apprentices their trades."

Mr. Garvin: "How can one instructor teach all crafts? How can we remedy this?"

Mr. Eyre: "We have the same situation. They should learn the fundamentals unique to the company."

Mr. Irvin: "The Department of Labor will send books with breakdowns on related skills."

Mr. Lesniok: "I would like to say that maybe we are over emphasizing the related training. I say that the apprentice will learn his craft mostly by exposure to the craft with a journeyman."

Mr. Usher: "I would say that related instruction is just a supplement to learning a craft. A good source of information for ap-

prentice and journeymen is from the manufacturer of controls and equipment."

Mr. Ward Carlyn, UAW, Akron, Ohio: "We have a problem in keeping the apprentice and journeyman friendly."

Mr. Garvin: "In Toledo we counsel apprentices in how to get along with journeymen, but all programs are not perfect."

Mr. John Hushion, Supervisor, Newark, Owens-Corning Fiberglas: "We have good vocational schools, but we don't have the material we need."

Mr. Usher: "I would suggest that you contact the State Board of Education and ask them to help with the material that you need. I am sure you will get full cooperation from them."

Mr. Charles Taylor, Director, Educational Training, Fisher Body Division, G.M.C., Cleveland, Ohio said, "We have solved the apprentice-Journeyman relationship problem in our plant by making the journeyman feel important. We have every apprentice assigned to a journeyman. This journeyman acts as the sponsor. The journeyman and the apprentice spend 45 minutes a week on company time to discuss any problems the apprentice may have. The journeyman then reports once a month on the progress of his apprentice. The journeymen welcome this and it works. The sponsor program does not eliminate the apprentice from working with all of the other journeymen in his craft. I would be glad to go over our sponsorship program with anyone interested."

Dr. D. H. Price, Department Head, Trade and Industrial Education, University of Cincinnati, Cincinnati, Ohio: "With regard to Instructional material, we do try to keep up with new texts. These are merely aids. For example, we put a text together or hydraulics but many people do not know that these texts exist."

Mr. Hushion: "DuPont spent two million dollars on instructional material for training programs. They have made available instructional material for all crafts. Their programs are quite complete."

Mr. David Knoblauch, 1377 IBEW, Strongsville, Ohio, "I am interested in the relationship and I find that today I have a difficult time keeping up with the changes in equipment. I think we must update the journeyman at the same time we are training an apprentice."

Mr. Taylor: "I think that this is a good point, and we at GMC do this. We send our journeymen out to the manufacturing plants where the equipment is made for instruction. We have found that this is well worth the expense."

Mr. Usher: "This is fine, but the problem is to translate it to the level of the apprentice."

Mr. Thuma: "We at Frigidaire send our people out to manufacturing plants also, but we find that these manufacturers are willing to come into your plants and conduct classes."

Mr. John L. Newton, Spicer Unit, Local 12 UAW, Dana Corporation, Toledo, Ohio: "With a registered program and a joint committee, in-plant problems are kept at a minimum. There are problems in getting some unions in accepting students from other unions for related training."

Mr. Neal: "The journeyman is important in the field of related instruction."

Mr. Eyre: "I think our over-all objective is to upgrade the maintenance crafts. I would like to see material consolidated into one book, so that it would benefit all of industry, in one usable package. I would like to see a questionaire sent out to see what is needed."

Mr. Usher: "Does the State publish a bibliography for crafts?"

Dr. Price: "We do not have anything that up to date."

Mr. Usher: "I would like to go on record for this group and say that we would like for the State to publish a book for crafts."

Mr. Douglas Phillips, Ford Motor Company, Apprentice Supervisor, Cleveland, Ohio, said: "I agree that a survey should be taken."

Mr. Elkins: "There is a definite need for the proper craft title. We now have in the trades people who carry millwright cards who are really machine repairmen. We should look to the Industrial Dictionary, which the U. S. Department of Labor has published with the proper titles for all crafts."

Mr. Thuma: "With uniformity of trade titles, I can see some problems. I think that related training must have flexibility. I would say that what is proper in one area may not be so in another. There are times when there is great jealousy among crafts."

Mr. Frank Pummel, I.U.E., Delco, Springfield, Ohio: "There are definite lines of demarcation in the crafts. I do not agree that flexibility is good when one craft will overlap into the other. I do not believe in grey areas. There are definite jurisdictional lines to follow."

Mr. Phillips: "Should we have flexibility in related training? We should build in more flexibility as the job and area dictate. We should not standardize in one area or throughout the State. It will do the trades damage in forcing standardized training throughout the State."

Mr. Elkins: "I disagree with the way flexibility has been used here. This will leave the door open for misunderstanding in the trades. Job titles and descriptions will, and should, say what the crafts responsibilities are."

Mr. John P. Heinz, Apprentice Coordinator, Ford Motor Company (Foundry & Engine Division), Cleveland, Ohio, said: "We must have 8,000 hours in apprentice training, with at least 576 hours of related training. I can see nothing less than this if it is to be a good program. The man is just beginning his career with this minimum amount of training."

Mr. Garvin: "I think that 8,000 hours in four years is too fast for apprentice training. I would like to see it extended."

Mr. Elkins: "I agree. I feel that there should be an extension of apprentice training time."

Mr. Kacvinsky then thanked the panel and **Mr. Thuma** for the tour of the Frigidaire plant. He also thanked **Mr. Irvin** for contributing to the committee on a statewide level.

Mr. Garvin: Before we adjourn, I would like to commend the entire panel for contributing to the best meeting that I have ever attended."

The meeting was then adjourned.

MACHINE, TOOL & METAL TRADES

Thursday **October 28**

OPENING REMARKS

Gerald D. Biddle, Member, Ohio State Apprenticeship Council, and International Representative, Skilled Trades Department, U.A.W., C.I.O., Toledo, Ohio

CHAIRMAN

John Sieger, Manager of Training, Ford Motor Company, Dearborn, Michigan

TOPICS: APPRENTICESHIP—ON THE JOB TRAINING

1. Work Training Schedules
2. Related Instruction
3. Ohio State Plan

PANEL MEMBERS

Joseph Milgski, Jr., M.E.S.A.—Local #4, Toledo, Ohio

George E. Freiberger, Chairman, Skilled Trades Committee, Local 87, U.R.W., Dayton, Ohio

Frank Gagliardi, Representative Skilled Trades—U.A.W.-C.I.O. Cleveland, Ohio

John Sieger, Mgr. of Training, Ford Motor Company, Dearborn, Michigan

H. E. Meeker, Personnel Mgr., International Harvester Co., Springfield, Ohio

Roy Harp, Training Specialist, Ford Motor Co. (Stamping Plant) Bedford, Ohio

CONSULTANTS

Robert M. Reese, Trade and Industrial Education, Ohio State University, Columbus, Ohio

Oscar R. Poole, Representative, Bureau of Apprenticeship and Training, U. S. Dept. of Labor, Cleveland, Ohio

Hector Dulude, Representative, Bureau of Apprenticeship & Training, U. S. Dept. of Labor, Grand Rapids, Michigan

MACHINE, TOOL & METAL TRADES

(Second Session)

Chairman Sieger opened the second session by explaining that we will develop work training schedules for some of the metal manufacturing trades. The purpose of working out the training schedules for various trades will also be used to determine what related instruction the trade requires.

We recognize that changes have been made in the various trades during the past five years and in most cases the apprenticeship work schedules have not been kept up to date.

At this time **Mr. John Sieger** who is the Manager of Training, Ford Motor Company, Dearborn, Michigan, mentioned some of the common metal manufacturing trades—e.g., Tool Maker, Die Maker, Tool & Die Maker, Die Cast Maker and Tool Room Machinist.

He asked the conferees to suggest what they thought should go into a Work Schedule for Tool & Die Maker covering the 8,000 hour term of apprenticeship.

The following items were suggested: Drill Presses, Milling Machines, Lathes, Bench Work, Boring Mills, Shapers, Grinders, Miscellaneous—such as: Filing Machine, Contour Cutting and Heat Treating.

It was the consensus of the conferees that this listing of machines and operations would cover the work for a Tool & Die Maker. He also explained that there will be differences in the tool and die work in jobbing and corporation shops and in methods used from shop to shop.

Continuing, Mr. Sieger said, "Let us now consider the amount of time for each machine or job within the 8,000 hour term of apprenticeship."

Following is the approximate amount of time for each of the machines or jobs suggested:

	HOURS
ORIENTATION	200
Tool crib, cutting steel, stock and supplies, issuing tools	
DRILL PRESSES—SINGLE—MULTI	640
SHAPERS	560
MILLING MACHINES	1200
LATHES—ENGINE & BENCH	1200
GRINDERS — INTERNAL — EXTERNAL	800
BORING MILL	400
BENCH WORK	2400
MISCELLANEOUS: FILING MACHINE, CONTOUR CUTTING HEAT TREAT	600
	8000

It was also agreed that there would be variations in the above schedule because of the type of work being performed in the different shops. Discussion also followed on whether the operations including set up, etc. should be listed for each machine.

Mr. Sieger then suggested that since the above information has been developed for the work training schedule covering the various machines and operations that we now discuss related instruction for the trade.

He mentioned that we should first consider that the Ohio State Apprenticeship Council requires a minimum of 144 hours per year (total of 576 hours) for the term of apprenticeship.

Dr. Robert M. Reese, Trade and Industrial Education, OSU Columbus, Ohio suggested that we discuss and list the required related instruction subjects for the trade. Those mentioned were:

Print Reading	Tool & Die Design
Trade Math	Job Planning and Layout
Machine Technology	Safety
Communications (Business English)	Metallurgy (Heat Treat)
Measuring Instruments	Handbook Study

It was the consensus of the conferees that related instruction should be well beyond high school level.

It was stated that some of the objection by apprentices to related instruction classes was that "it was the same as they had in high school." It was recommended that all instructors be qualified journeymen from the trade.

It was further stated that the number of hours allocated for each subject should be based on its importance to the trade. This total must not be less than 576 hours during the term of apprenticeship.

The 144 hours each year shall be a guide for the instructor in determining the number of hours per subject.

The conferees agreed that this was well worthwhile and should provide time for all subjects required for the trade.

Chairman Sieger complimented the group for their participation and contribution on this important subject of related instruction for the trade. At this time he turned this session over to Mr. Poole for remarks.

Mr. Oscar R. Poole, Representative, Bureau of Apprenticeship and Training, U. S. Dept. of Labor, Cleveland, Ohio spoke: "Before we close this session, I want to hand out to each of you a copy of the Ohio State Plan as developed and approved by the Ohio State Apprenticeship Council. This implements the Equal Opportunity Standards under Title 29, Code of Federal Regulations, Part 30 covering Nondiscrimination in Apprenticeship. Be sure you read this Plan completely so you will be aware of the regulations concerning the selection of apprentices for your apprenticeship program.

"I want to thank our most capable Chairman, John Sieger, for the excellent job he did in chairing both sessions of this Conference; also each panel member for his presentation of assigned topics and

contribution; and all conferees in both sessions for your active participation which was most helpful and enlightening in developing topics assigned.

"I am sure you learned something during these sessions that will improve the operation of your apprenticeship program.

"Your contributions and participation have made this 15th Ohio Apprenticeship Conference so successful. I hope to see each of you in Toledo next year for the 16th Annual Apprenticeship Conference. Thank you."

GENERAL MEETING

Thursday **October 28**

AFTERNOON SESSION

The closing session of the Fifteenth Annual Ohio Apprenticeship Conference commenced with a luncheon at 12:15 P.M. in the Grand Ballroom of the Sheraton-Dayton Hotel.

Seated at the speakers table were:

John E. Morley, Builders Association of Mahoning Valley; Member, Ohio State Apprenticeship Council, Youngstown, Ohio.

William C. Webb, Regional Director, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio.

Richard A. Reef, Assistant Director, Regional VI, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio.

William L. Sells, State Supervisor, Bureau of Apprenticeship & Training, U. S. Department of Labor, Columbus, Ohio.

And the following individuals who comprise the OHIO STAFF of the Bureau of Apprenticeship and Training, U. S. Department of Labor:

Kenneth Banks, Cleveland, Ohio.
Irwin G. Feldman, Cincinnati, Ohio.
Clayton G. Gabel, Canton, Ohio.
Merle R. Hemple, Youngstown, Ohio.
Harold James, Cleveland, Ohio.
William J. Kacvinsky, Cleveland, Ohio.
Daniel T. McCarthy, Cleveland, Ohio.
Paul A. Moore, Youngstown, Ohio.
Joseph L. Phillips, Columbus, Ohio.
Oscar R. Poole, Cleveland, Ohio.
E. R. Puterbaugh, Dayton, Ohio.
Harry S. Quine, Akron, Ohio.
Earl A. Shobe, Cincinnati, Ohio.
Thomas A. Wendt, Toledo, Ohio.

Following the luncheon, **Mr. John Morley,** Builders Association of Mahoning Valley; Member, Ohio State Apprenticeship Council, Youngstown, Ohio, opened the meeting by introducing **Mr. William C. Webb,** Director, Region VI, Bureau of Apprenticeship and Training, U. S. Department of Labor, Cleveland, Ohio, who summarized the conference by saying:

"This is the highest quality conference ever held in Ohio and one of the highest in attendance—over 650 present.

"There has been fine attendance in all the sessions and a wonderful participation by many of you who have come many miles to take a part in these discussions and share your wisdom with your

groups. We hope you will take what you have heard back home and put it to work.

"Now I would like to give a breakdown of the attendance in the various craft meetings.

Barbering Trades—23 participated in this session.

Bricklaying and Stonemasons Trades—two sessions — 90 in attendance.

Carpentry and Woodworking Trades—70 attending the two sessions.

Cement Masons and Plasterers—34 in attendance. No one participated from Lathers.

Electrical Trades—Out of the two sessions—84 first—92 in second.

Joint Building and Construction Trades—135 in attendance.

Graphic Arts Industry—47 in attendance at these two meetings.

Industrial Maintenance Trades—82 attended in two meetings.

Ironworking Trades—51 present in two meetings.

Machine, Tool and Metal Trades—93 attending two sessions. 12 new individuals for the first time at our conferences.

Operating Engineer Trades—100 in two meetings.

Painting, Decorating and Paperhanging Trades—65 attending two meetings.

Plumbing and Pipe Fitting Trades—95 both meetings.

Roofing Trades—31 in attendance.

Sheet Metal Trades—69—2 meetings.

Mr. Webb then introduced the men on his staff from Ohio, Michigan, and Kentucky and said: "We try to bring you information from time to time, that you may not agree with, but we will give you this information, and if we can help you—that is what we are here for. We will never tell you what you have to do, but we will always help you do what you want to do. If we can present something that can be helpful in making your program a little better—that is our aim.

"We have a situation here about which I would like to speak for a moment. You may hire an apprentice and have him serve a probationary period, which is the right of any sponsor, but one word of caution. Will you please keep this in mind—**don't let that apprentice go on a job that has Federal or State money in it until that apprentice has been registered with the Ohio State Apprenticeship Council. If you do, the contractor will be penalized because he will have to pay journeyman wages for every hour that the boy was not registered.**

"We will consider a worker for enforcement purposes to be a bona fide apprentice from the date of indenture execution provided the date of approval by the craft's Joint Apprenticeship Committee and the State Council's registration date are within thirty (30) days of the indenture's execution. So, you have a 30 day leeway; however, in the event this is not observed, the State Council's registration date will control.

"It is better to indenture an apprentice right away and then if it does not work out, the agreement can always be canceled. This

can be done without any difficulty, and this works a whole lot better than having a payroll held up because an apprentice was not registered within the 30 day period.

"So, remember, if you use apprentices on Federal or federally assisted construction projects they must be under a bona fide program —in this state registered with the Ohio State Apprenticeship Council.

"Again, I say this is the best conference that has ever been held in Ohio, and it is all because you people are interested and because you have made your contribution.

"By the way, the ladies added a lot to this conference, and we do hope a lot more will come with you next year."

After Mr. Webb's remarks, **Mr. Morley** introduced **Mr. John F. Kostyo,** the Executive Secretary of the Ohio State Apprenticeship Council, and several of the Council members who were present, and then adjourned the afternoon session at 1:15 P.M.

AGRICULTURAL EDUCATION; *HAND TOOLS; *EQUIPMENT; *FARMERS; *EQUIPMENT UTILIZATION; SURVEYS

A study was conducted to determine the hand tools and power equipment owned and used by central Illinois farmers to make farm repairs. Data were collected by questionnaire from 77 agriculture students at Illinois State University and 173 vocational agriculture students in Central Illinois high schools regarding the tools and equipment used on the home farms of each student. Of the 99 hand tools listed on the questionnaire, 16 were owned by 98 percent of the farmers and 62 were owned by 50 percent of the farmers. The 16 hand tools commonly owned by Central Illinois farmers are the claw hammer, pliers, crosscut handsaw, screwdriver, putty knife, paint brush, adjustable wrench, tin snips, hacksaw, steel square, wrecking bar, ax, cold chisel, jack, pipe wrench, and sledge. Of the 28 pieces of power equipment listed on the questionnaire, the 5 most commonly owned and used are the portable drill, air compressor, tool grinder, portable saw, and paint spray gun. Teams with farms of 480 acres and larger had more power equipment than smaller farms. However, farmers who owned their farms and secured the major portion of their income from livestock had more equipment than any other group. (JM)

PREFACE

This study was inaugurated to secure a list of the hand tools and power equipment which farmers own and use to make repairs on their farms as well as to determine the frequency of ownership of each item. It is hoped that this information will be of value to farmers, students of agriculture, and teachers of agriculture.

The author is especially grateful to the 250 individuals who supplied the data for the study. It was their valuable assistance that made the study a reality.

The cooperation of Dr. Harvey S. Woods, who took the photographs which are used in the publication and gave many helpful suggestions throughout the study, is truly appreciated. The author wishes to acknowledge with gratitude the assistance from Dr. Milford C. Jochums who edited the manuscript. Lastly, the author wishes to thank the teachers of agriculture who cooperated in the study, the farmers who supplied material for photographs, and all other people who helped in any way to make the study possible.

TOOLS AND EQUIPMENT USED TO MAKE REPAIRS ON THE FARMS IN CENTRAL ILLINOIS

Orville L. Young*

Purpose of the Study

The question as to what tools and equipment are needed in a school farm shop often presents a problem. There is general agreement that the teacher of agriculture should give instruction in those things which farmers need and use. If the teacher is to do the job most effectively, he must know the practices farmers are presently following. It has been assumed that a list of the tools and equipment used by farmers should be a helpful guide for the teacher in determining what tools and equipment should be selected for inclusion in his teaching program. This list should also be helpful to the teacher when he is counseling farmers concerning the proper tools to buy. In addition, the list should be useful to the farmer himself when he is deciding what tool to buy next.

It is the purpose of this study to secure a list of the tools and equipment which farmers have and use in making repairs on their farms. In addition, the frequency of ownership will be indicated. These data will be classified according to ownership of land, type of farming, size of farm, and all farms.

---

*Dr. Young is Professor of Agriculture at Illinois State University at Normal.

With this information available, the teacher can decide more intelligently what tools and equipment should be in the school farm shop and how much time should be spent on the different areas of the farm shop program.

It is recognized that these data are general in nature and may not necessarily apply *in toto* to any given situation. However, it seems reasonable to believe that conditions are not variable enough to prevent the use of the findings as a reliable guide for the teacher of agriculture.

Scope of the Study

Data for the study were secured from 250 farms which were located mostly in central Illinois. Data were secured from the farms of 77 students who were enrolled in agriculture at Illinois State University. Data were also secured from 173 farms located in central Illinois. All data were secured personally by the writer.

Method of Procedure

An information form was devised which was used in securing data. Students in agricultural education at Illinois State University who lived on farms were then contacted. These students filled in the information forms under the personal supervision of the writer. Seventy-seven completed forms were obtained from this group.

It was assumed that 250 completed forms would give a reliable sample so a sufficient number of teachers of vocational agriculture in central Illinois were contacted to secure the additional 173 forms. The writer spent a day in each school where the students in vocational agriculture who lived on farms filled in the forms under his supervision

as well as that of the teacher of vocational agriculture. If there were brothers in a school, only one of them filled in the form.

It was assumed that this method of sampling would give a true cross-section of farms. All students in the sampled group who lived on farms were included. No special group of farmers were selected. By this procedure, data were secured from all of the people in a group and not just from part of the group as is the case where forms are sent out and only part of the forms are returned. In addition, the writer was present when the student was filling in the form to answer any question that the student might have. Those participating were instructed to include only tools and equipment which were used to make repairs on the farm and to omit any tools which they owned but did not use or which they owned and used only as a hobby rather than for doing farm jobs.

Presentation of Data

The 99 hand tools listed in Table 1 were owned by the farmers in the study to make repairs on their farms. The tools are listed according to frequency of ownership. If frequency of ownership is identical for two or more tools, they are then listed according to the typical number per farm. In case the frequency of ownership and the typical number are both identical, tools are listed alphabetically in Table 1.

TABLE 1

HAND TOOLS OWNED TO MAKE REPAIRS ON FARMS

Name of Tool	Typical number per farm*	Frequency of ownership: Number of farms	Frequency of ownership: Per cent
Claw hammer	4-5	250	100.0
Pliers	4-5	250	100.0

*Greatest number of cases

For this study, a typical farmer from the standpoint of the number of any particular tool owned to make repairs on the farm is considered as one who falls within the classification containing the greatest number of cases. This might also be called the modal number.

Each tool was classified according to the number owned per farmer into groups owning one, two to three, four to five, six to ten, and eleven or more tools per farm.

Table 1 shows that 16 of the 99 hand tools are owned by 98 percent or more of the farmers. Furthermore, it will be seen that most of them own two or more of each of these tools. Sixty-two tools listed are owned by more than 50 per cent of the farmers, and about half of them have two or more of each tool. There are only ten tools which are owned by less than 25 per cent of the farmers.

If we assume that the majority is correct, about two thirds of the tools listed in Table 1 should be owned by farmers to make repairs on their farms.

From Table 2, we learn that five different pieces of power equipment are owned by the majority of farmers. Eleven pieces are owned by more than 30 per cent of the farmers. Twelve of the 28 pieces of power equipment are owned by less than ten per cent of the farmers. The typical number is not shown in Table 2 since it would have been one in all cases except the portable drill. Of those farmers who had a portable drill, 48 per cent had only one drill. In 65 per cent of the cases, this was a half-inch capacity drill. Where there were two drills per farm, the common sizes were half-inch and quarter-inch capacity. One might conclude from the table that a majority of farmers have welders. However, it was found

TABLE 2

POWER EQUIPMENT OWNED TO MAKE REPAIRS ON FARMS

Name of equipment	Frequency of ownership	
	Number of farms	Per cent
Portable drill	221	88.4

Hack saw	13	5.2
Band saw	11	4.4
Steam cleaner	9	3.6
Jig saw	6	2.4
Jointer	5	2.0
Impact wrench	2	0.8
Valve grinder	2	0.8
Wood lathe	2	0.8
Metal lathe	0	0.0

that only 43 per cent have welders. Four per cent have gas welders only, and 26 per cent have electric welders only. Thirteen per cent have both.

In Table 3 the farms are grouped into 160-acre blocks. This division very closely approaches the average size of farm in the study which is 313 acres as shown in Table 5. A study of Table 3 shows that except in seven of the 28 cases, the farmers with farms of 480 acres and larger had more power equipment than the farmers with any smaller size of farm. In three of the seven cases, the larger farms had more equipment than the farms of less than 160 acres. Not only did more of the larger farms have power equipment, but in many cases, there were twice as many farmers with a particular piece of equipment. In some cases, the larger farms had three or four times as much power equipment as the smaller farms. Further study of Table 3 shows that in seven cases, the per cent of farmers owning a particular piece of power equipment increases as the size of farm increases.

The data presented in Table 4 show the per cent of farmers owning different power equipment by different classifications. With the exception of the power grindstone, the owners in most cases had more power equipment than the renters. In the few cases where the owners did not have more, they had almost as much as the renters. In several cases, there were twice as many owners as renters with a given piece of power equipment. The crops farmers had more power equipment than the livestock farmers. The crops-owners had more power equipment than the crops-renters and the livestock-owners had more equipment than the livestock-renters.

It might be assumed that owners had more equipment than renters, crops farmers more than livestock farmers, crops-owners more than crops-

* Farmers who own part or all of the land they operate and secure more than half of their farm income from livestock and/or livestock products.

\# Farmers who own part or all of the land they operate and secure more than half of their farm income from crops.

**Farmers who rent all of the land they operate and secure more than half of their farm income from livestock and/or livestock products.

\#\#Farmers who rent all of the land they operate and secure more than half of their farm income from crops.

renters, and livestock-owners more than livestock-renters as shown in Table 4 because they had larger farms as indicated in Table 5, and because there is a definite relationship between the size of farm and the amount of power equipment as indicated in Table 3. However, size of farm is not the only factor of influence since further study of Table 4 shows that livestock owners have more power equipment than any other classification, yet Table 5 shows that four of the classifications have larger farms and one classification is almost equal in size.

TABLE 5

SIZE OF FARMS

Classification	No.	Acres in farm		Tillable acres	
		Average	Range	Average	Range
Own-livestock	72	299	10-880	252	7-875
Own-crops	92	338	10-1000	297	6-980
Rent-livestock	28	243	120-560	219	85-550
Rent-crops	58	323	47-1300	295	24-950
Own	164	321	10-1000	277	6-980
Rent	86	297	47-1300	270	24-950
Livestock	100	284	10-880	243	7-875
Crops	150	332	10-1300	296	6-980
All farms	250	313	10-1300	275	6-980

The average size of farm and the number of farms in each classification are shown in Table 5. It will be noted that the average size of all farms in the study was 313 acres with 275 acres tillable and that the farms ranged in size from 10 acres to 1300 acres. The following facts not indicated in Table 5, may have interest. Of the 164 owners, 65 were full owners with an average size farm of 231 acres and 99 were part owners with an average size farm of 330 acres.

All of the farmers in the study had electricity on their farms.

Forty-nine per cent of the farmers used a part of the garage as a shop. Twenty-one per cent used a part of the machine shed, usually one end, as a place to store tools and make repairs. The others used the barn, basement, utility room, or a separate building for a workshop.

Less than half of the men had any means of heating the shop.

Farmers do not have any typical procedure for storing their tools. Ordinarily, the individual farmer uses two or three methods. The two methods most commonly used by farmers to store their tools are the tool box and hanging the tools on the walls of the shop. Each of these methods is used by about 80 per cent of farmers. Wall cabinets, wall tool boards, and cans are each used by about one third of the farmers. Many have tools lying around loose.

Summary and Conclusions

The study was conducted to determine the hand tools and power equipment which farmers own to make repairs on their farms and to discover the frequency of ownership for each of these items.

The sixteen hand tools usually found in the farm shop are the claw hammer, pliers, crosscut handsaw, screwdriver, putty knife, paint brush,

crescent wrench, tin snips, hacksaw, steel square, wrecking bar, ax, cold chisel, jack, pipe wrench, and sledge. These tools are owned by 98 per cent or more of the farmers.

Sixty-two hand tools are owned by more than half of the farmers. About half of this group of farmers own two or more of each of these tools.

The five pieces of power equipment commonly found in farm shops are the portable drill, air compressor, tool grinder, portable hand saw, and paint spray gun. These five items are owned by the majority of farmers. Eleven pieces of power equipment are owned by more than 30 per cent of the farmers.

There is a definite relationship between the size of farm and the amount of power equipment owned by the farmer to make repairs on his farm.

The group of farmers who own their farms in whole or in part and secure the major portion of their income from livestock have more equipment than any other group.

MUSKEGON COUNTY; MICHIGAN

Information was derived from (1) a survey of business and industry (137 responses from 387 firms contacted), (2) parent opinionnaire (60 percent response from parents of fifth graders), (3) followup survey of high school graduates in 1959, 1961, and 1963 (501 responses from 1,670 contacted), (4) a survey of seniors in twelve schools (96 percent response from 2,134 contacted), and (5) an extensive study of curriculum offerings of secondary schools in the areas of homemaking, business, industrial arts, agriculture, and trade and industrial education. Reports from the community college and special education subcommittee gave current status of their vocational training programs. Recommendations included: (1) An area vocational center for youth in grades 10, 11, and 12, advanced vocational students, and adults should be established in the area, (2) Students attending the center should remain half time with their local districts, (3) In business education, concentration should be on office machines and advanced bookkeeping at the 12th grade level, (4) Homemaking programs in food service, advanced tailoring, nurse-aid orderly, and other health occupations should be offered, (5) Industrial arts should provide basic courses for student enrolling in an industrial-type program, and (6) All secondary cooperative training programs should be conducted and operated from the area vocational center and made available to all youth in the area. Recommendations for the area vocational center curriculum are given. Possible implementation methods are listed. (PS)

FOREWORD

In April of 1964, the Muskegon Area Intermediate School District Board of Education appointed a 60-member lay advisory committee to discuss the needs in vocational-technical education in Muskegon County.

This committee, called the Muskegon County Vocational and Technical Committee under the chairmanship of Mr. John Medendorp, a Muskegon industrialist, envisioned a need for a new concept in the education of youth in Muskegon County. Of particular interest to them was the large segment of high school students who do not intend to continue education in a four-year academic college program and also to those who have for one reason or another dropped out of school before graduation.

In November of 1964, the Intermediate Board of Education Established a position of Vocational Consultant and employed the services of Mr. Harold S. Fisher. The proposal for an area study of vocational-technical needs was made and the Intermediate District gained the support of every secondary district in the county as well as the Community College and the two secondary parochial schools in Muskegon.

With their financial support and matching funds from the State Office of Vocational Education, Department of Education, this study was started in February of 1965.

The Muskegon County Vocational & Technical Committee was expanded to include subcommittees on the needs of agriculture and the needs of the work bound girl. The services of a part-time staff of seven area educators to act as coordinators for the various subcommittees was secured. This study is indebted to their respective boards of education for allowing them to participate.

The staff worked with the subcommittees and each part of the study was conducted separately. In June of 1965, the reports of all subcommittees were completed and submitted to the Steering Committee for their consideration of the several recommendations. The Steering Committee presented these findings and recommendations to the committee-of-the-whole in September of 1965.

The reader should realize that these recommendations and the findings which support them are the result of the efforts of many people. The Project Director, the staff and the Board of Education of the Muskegon Area Intermediate School District are deeply indebted to the members of the Vocational and Technical Committee, the Muskegon Area Development Council, Muskegon Manufacturers Association, the Central Labor Council, Muskegon Business College, the Michigan Employment Security Commission of Muskegon and the

hundreds of businessmen, parents, graduates and students who took the time to fill out and return questionnaires. The staff is most grateful for the dedicated assistance of Mrs. Vicki Clark, Secretary for the project. Many thanks are due to Brunswick Corporation and also to Joseph Anthony, Vice-President, for their assistance and guidance in tabulating the results of the Business and Industry Questionnaire and the Parent Opinionnaire.

The readers should recognize that the recommendations are made with the full realization that there are other courses of action that could be taken to provide vocational-technical education. However, those herein are considered to be the recommendations which will best fit the needs of all the youth of Muskegon County and will provide the most economical program and at the same time provide training which will give quality to the type of skills to be trained for.

Finally, the project staff extends best wishes to the people of the Muskegon Area Intermediate School District in the implementation of these goals. Action is needed immediately and it is hoped that this writing will encourage the new vision and leadership needed to provide the kind of education so necessary to provide equal opportunity for all youth.

THE ROLE OF THE MUSKEGON COUNTY VOCATIONAL & TECHNICAL COMMITTEE IN THE AREA STUDY

Due to the fact that the committee was activated before the Area Study was approved, it was necessary to add to the membership.

The reorganization of the committee took place at a general meeting at Mona Shores High School on January 26, 1965.

At this meeting three new subcommittees were added to the existing committee so that the study would include the areas of agriculture, the work bound girl and a graduate follow-up.

Each subcommittee was assigned a part of the study as follows:

Subcommittee	Function
Community Involvement	Business & Industry Survey Parent Opinionnaire
Survey Secondary	High School Curriculum & Facilities
Survey Graduate	Graduate Follow-up and 12th Grade Survey
Employment Bound Girl	Study the Needs in this Area and Possible Solutions
Vocational Agriculture	Study Needs in Training for Agriculture in County
Survey Community College	Community College Curriculum and Facilities
Special Education	Report on Present Work and Future Needs
Legislation & Finance	Report on enabling legislation & Methods of Financing Solutions

Each subcommittee worked as a unit by itself and the coordinator of each one acted as its executive secretary. The coordinator acted as a liaison with the Project Director and all communications with the committee went through the Director's office.

A meeting of the Steering Committee of the Vocational & Technical Committee was called on March 25 where preliminary reports of all subcommittees were presented. By June 30, all reports were completed and were presented to the Steering Committee for discussion and for recommendations on July 1. Two more meetings of the Steering Committee were held on July 12 and August 13.

Recommendations contained in this report were discussed and passed upon and further recommended to the committee-of-the-whole on September 9, 1965. Therefore, this writing is not only the work of the staff and each subcommittee, but contains the recommendations of several advisory persons from all walks of life in Muskegon County. After careful consideration and timely discussions, the Muskegon County Vocational & Technical Committee presents this document in the hopes that it will contribute to a new concept in the education of all youth, and assist in establishing a unified approach to training all individuals for occupational competency.

INTRODUCTION

Trends in Vocational Education

In this age of technology, automation, and extreme social change, public education is being faced with the realization that a new concept in education is needed. With the arrival of sputnik and the space age, much was written in magazines, newspapers, etc. which caused educators to place a strong emphasis on academic or a pre-college curriculum. With this movement, many fine improvements were made in the methods and programs in the majority of our secondary schools. With the recession of 1958 came the appointment of the President's Council on Vocational Education. This study committee alerted the people and the legislature to the needs for increased emphasis in education for occupational competency.

As the economy of the country increased in the next few years, it was noted over and again that jobs requiring skills were not being filled while the unemployment rolls grew. The study also stated that the service occupations were growing rapidly and that educational institutions were doing little to change their standard curriculum to meet the changing needs of business and industry.

The demand for technically oriented courses encouraged people from all walks of life to have concern for the kinds of education that were being provided for youth.

With the passage of the Vocational Act of 1963, educators, businessmen and government agencies are now expressing recognition for the tremendous needs that are evident in the 60 to 70 per cent of the youth who do not pursue a four-year education. In the state of Michigan in 1965, 22 separate area vocational studies are being conducted. The Michigan Department of Education, Intermediate School Districts, community colleges, and universities are all cooperating to determine the needs of youth in Michigan.

On the local level the establishment of the Muskegon County Vocational & Technical Committee was a significant step in the right direction and this study is the result of their efforts. This writing will attempt to show the specific needs for training for the youth of tomorrow in Muskegon County.

The Nature of Vocational Education

Vocational education is any form of education which trains or prepares an individual for occupational competency. For this study the definition includes instruction for all occupations which require education and training of less than a college degree level.

Technical education, as we define it for the study, will deal with vocational education and training for those types of employment which are defined as technician occupations. For the purpose of clarifying it in the readers mind, the type of education that we will be discussing in this writing are vocational and technical education. We separate vocational and technical education from the normal programs of a pre-vocational nature which are normally known as industrial arts, manual training, homemaking, etc.

We fully realize the need for pre-vocational education and will attempt to demonstrate how this type of training should be included as a part of the total program for vocational competency and the weakness and strength of the pre-vocational programs in the secondary schools in Muskegon County today.

The difference between vocational education and technical education lies in the amount of knowledge versus the manipulative skill in a given occupation; therefore, it would be necessary for one to determine the occupational requirements of skill and knowledge in an occupation in order to properly define training as either vocational or technical.

Normally, one could say that vocational education should be taught on the high school level and technical education on the community college level. The reader should, however, recognize the fact that many adults are in need of upgrading and training after they leave their formal education; therefore, keeping the necessity of vocational education to be taught on the post-high school level.

Figure 1 shows the paths that a person may take to employment through education. The large segment that could reach employment in skilled and semi skilled occupations through the high school vocational departments or area vocational centers are being deprived of this opportunity because of the lack of facilities as will be shown in this writing.

CHAPTER I

FACTS ABOUT THE

MUSKEGON AREA INTERMEDIATE SCHOOL DISTRICT

Geographic Area Served

The Muskegon Area Intermediate School District is for the most part located in Muskegon County, although its boundaries do not coincide with those of the county. The district is a separate governmental body operated by the Muskegon Area Intermediate School District Board of Education.

Muskegon County covers an area of 510 square miles including 153,000 persons. The western boundary lies along the shore of Lake Michigan. The metropolitan complex of Muskegon and Muskegon Heights serves as the industrial and business center for the entire district.

The Michigan Employment Security Commission Manpower Report, "A Look at the '60's", shows that Muskegon County is growing at a rate of 5 per cent over the state average. Therefore, an increase in the labor force of 26 per cent is anticipated within this decade. In absolute numbers it is estimated that 14,300 more persons are entering the labor force in this decade.

The county contains several "pockets" of poverty stricken, low income families. Major areas of this nature lie in the cities of Muskegon and Muskegon Heights. Others are scattered in several of the other 10 secondary school districts shown on the map submitted.

The map in Figure 2 shows the boundaries of the district and the county.

MUSKEGON AREA POPULATION

These projections are from the Feasibility Report on Water and Sewerage Facilities for the Greater Muskegon Metropolitan Area by Clark, Dietz, Painter & Associates, Urgana, Illinois. They are based on the analysis of studies by several consultants and upon interviews with governmental officials in each of the units. The projections were made in the latter half of 1962, and are presently being re-evaluated in light of experience since that time and estimates of current population by Clark, Dietz, Painter & Associates for the Muskegon Area Water and Sewer Authority. These were tabulated for us by the Muskegon Area Development Council.

Muskegon County Population Trends
(Standard Metropolitan Statistical Area - SMSA)

While some outlying areas have grown very rapidly between 1950-60, and could continue to do so between 1960-70, most of the population growth in Muskegon County between 1950-60, in absolute numbers, took place in the Greater Muskegon area (nine governmental units). Of the total county population increase of 28,398 between 1950-60, 21,071 or 74.2 per cent took place in the Greater Muskegon area. Between 1960-70, projections show that 78.4 per cent of the growth in population may be in the Greater Muskegon area (See Table 3). As of 1960, 125,990 or 84.0 per cent, of the total county population of 149,943 was in the nine governmental units of the Greater Muskegon area (See Table 1).

Greater Muskegon Area Population Trends

While most of the county's actual population growth between 1950-60 and projected growth between 1960-70, in absolute numbers, is taking place in the Greater Muskegon area, this growth is to be found in the suburban fringe rather than the central city core. By 1990, it is estimated that only about 38 per cent of the population of the Greater Muskegon area will reside in the two central cities.

TABLE 4
Greater Muskegon Area Population Trends

	Muskegon and Muskegon Heights	Greater Muskegon Area*	Central Cities as a % of Greater Muskegon	Suburbs as a % of Greater Muskegon Area
1940	63,744	82,241	77.5	22.5

1980	75,010	181,000	41.4	58.6
1990	79,500	208,500	38.1	61.9

* Greater Muskegon Area includes the cities of Muskegon, Muskegon Heights, Roosevelt Park, and North Muskegon and the Townships of Egelston, Fruitport, Laketon, Muskegon, and Norton.

Central City Population Trends

The City of Muskegon in 1960 experienced its first drop in the decenial census since the decline of the lumber industry in the 1890's. (See Table 5). Even more important than total numbers, perhaps, are the resultant changes in the social and economic characteristics of the central city population.

CHAPTER II

WHAT DID BUSINESS & INDUSTRY SAY?

Over 3,000 business listings were obtained through the United Appeal office. Table 10 shows the categories that were used.

Major industry and business, which accounts for 80 per cent of county employment, were covered in a 100 per cent sampling. These are businesses which employ over 100 persons. Other categories were surveyed by random sampling.

Survey instruments were distributed by mail with one follow-up letter and some telephone calls.

Table 10 shows the sampling and per cent of returns. A percentage and a multiplying factor were used to determine total employment in each job listed in the study. The survey instrument which was used is shown in the appendix on pages 58 through 66.

Table 11 shows how the results of the survey were used to determine projected needs of area business and industry.

From these tabulations it was determined what occupational level could be satisfied by increased training at the high school level and what available occupations required training at the community college level. Also considered were data obtained from the Muskegon Area Development Council on population trends, the Muskegon Manufacturers Association, the Muskegon Business College and the Michigan Employment Security Commission.

Data from the Muskegon Area Development Council regarding state and national trends in employments needs and also a study conducted by this organization on the potential of new industry in the area was valuable in determining the needs of indistry and business for trained employees.

Much of this data aided in including the mobility factor of graduates of area high schools.

The listings of training needs shown on page 17 are the result of these findings.

Mechanical Technicians	108	3 out of 6	2 out of 5

AREAS OF TRAINING NEEDED AT SENIOR HIGH LEVEL FROM BUSINESS & INDUSTRY SURVEY

INDUSTRIAL

- Appliance Repair
- Automotive Mechanic
- Cabinet Maker (small groups)
- Electronics Repair
- Machine Operators
- General Mechanic
- Truck Driver
- Welder
- Heavy Equipment Operator

SERVICE

- Beautician
- Cooks or Chef
- Waitress Training
- Custodial
- Law Enforcement
- Nurses Aid - Orderly (Health occupations)
- Sales Training (retail general distributive education)
- Seamstress & Tailoring
- Service Station Attendant

BUSINESS - OFFICE

- Bookkeeping (new emphasis)
- Clerk-Typist (continued)
- Stenographer (new emphasis)

AREAS FOR GREATER CONCENTRATION FOR APPRENTICE TRAINING

- Carpentry
- Electrician
- Machinist
- Millwright
- Plumber
- Sheet Metal Worker
- Mason
- Tool & Die

AREAS FOR TRAINING AT COMMUNITY COLLEGE FROM BUSINESS & INDUSTRY SURVEY

INDUSTRIAL

- Automotive Technician
- Chemical Technician
- Drafting & Design Technician
- Electrical and/or Electronics Technician
- Firstline Supervisory (Management)
- Instrumentation Technician (small)
- Mechanical Technician
- Metallurgical Technician
- Quality Control Technician

BUSINESS

- Accountants (heavy)
- Commercial Art (small)
- Data Processing
- Business Management
- Merchandisers
- Outside Sales (heavy)
- Retail Management & Buying
- Sales Management
- Secretarial

HEALTH - MEDICAL

- Medical Lab Technician
- Nurse (Practical)
- Nurse (R.N.)
- Medical office secretary & assistants

POINTS OF INTEREST FROM EMPLOYER STUDY

One third of the employers found graduates of high school reasonably well prepared for entry jobs.

One third felt they needed considerable more training before they performed satisfactorily.

The other one third either found them suited only for unskilled jobs or did not have employment suited for them.

Very few industries and businesses made it a practice to hire dropouts in any jobs other than very unskilled labor. Most employers have found "dropouts" to be unsatisfactory; but those who have provided training for them or obtained them with training, found them satisfactory for some jobs.

High school graduates are accepted in office jobs, sales, apprentice, service, semi-skilled and in unskilled labor categories.

However, the survey shows that in Major Industry, General Industry, Construction, Transportation, and Government, that 9 out of 10 jobs, less than management level, require no more than a high school education. At the same time, industry and business people are saying that the majority of the high school graduates need more training. It would seem evident that they are also stating their feelings that this additional training could and should be done at the high school level.

Highly skilled, technicians and many business office jobs require more than a high school education.

Those industries and businesses who answered the questions on improving vocational training generally felt that there was a need for an area vocational center for secondary training and that the Community College occupational curriculum should be expanded.

Less than one half of the firms had any formal training programs at all. Of those who did, only 14 have apprentice training programs, 16 have job upgrading of some nature and 11 are participating in technical training through the community college; but the greater number of training programs involve supervisory or management level training.

CHAPTER III

WHAT DID THE PARENTS SAY?

Parents of all fifth graders in all public schools in the county were distributed an opinionnaire on vocational education. Sixty per cent of the parents responded. Fifth grade parents were questioned as it was presupposed that this group of students would be the recipients of full benefits of a long range program should we develop a progressive approach of added vocational training.

Table 12 indicates the breakdown of the type of occupations held by the head of the household of those surveyed.

TABLE 12

Nine-four per cent of the heads of household were male and 81 per cent of them worked in the greater Muskegon complex. Nine per cent worked in out-county areas and 10 per cent worked outside of the county.

Nine-four per cent of the heads of household were male and 81 per cent of them worked in the greater Muskegon complex. Nine per cent worked in out-county areas and 10 per cent worked outside of the county.

Only 2 out of 10 parents thought the schools were adequately preparing youth for employment. Half said a fair job was being done.

They did believe that the guidance and counseling was helpful but indicated improvement was needed in vocational guidance.

Six out of 10 said many more vocational programs were needed and 2 out of 19 agreed that we should add a few more to what we are now doing.

When asked what kinds of training we should make available for their sons and daughters, they emphasized the following:

Machine Tool	Business Machines	Building Trades
Welding	Retail & Sales	Appliance Repair
Automotive	Hospital Aids	Electronics
Woodworking	Medical Technology	Data Processing

Parents also felt a need for the development of proper work attitudes.

(It is interesting to note that parents indicated needs in the same general categories that were shown to be demand occupations by local business and industry.)

When we asked parents how we should provide this kind of training and explained that this would require more buildings and expensive equipment, 6 out of 10 responded in favor of an area vocational school centrally located and available to all youth of Muskegon County. In addition, 9 out of 10 were in fabor of financing this on a county-wide millage basis.

Nine out of 10 parents said they would encourage their child to avail themselves of vocational training should that child not be interested in college training. Nine out of 10 were concerned about the "dropout" problem and over half felt that added emphasis in vocational training would help keep students in school longer. Over half of the parents indicated an interest in upgrading and improving themselves through participation in potential evening classes should new area facilities be made available to them.

Overwhelming support seems to be indicated by parents for an area vocational school, financed on a county-wide basis. They felt that this facility should be made available to all youth in every secondary school in Muskegon County.

The results were tabulated to enable us to compare responses from one school district with another. An interesting fact is that parents from the higher income areas said the same thing that all the others did. There was no evidence of any degree to disagreement of what was needed in vocational education between such areas as North Muskegon and Lincoln Park Schools and Muskegon Heights and Ravenna.

The survey opinionnaire used is shown in the appendix of this document on pages 70 through 73.

CHAPTER IV

WHAT DID OUR GRADUATES SAY?

A random sampling of 1/3 of all the graduates from all the senior high schools in the county, including Catholic Central and Western Michigan Christian High School, was conducted in the classes of 1959, 1961, and 1963. There was a total mailing of 1670 with only 83 returns marked "no such address or unable to locate". A total of 501 returns were received which would account for a 30 per cent return.

It was noted in the final tabulations that graduates from Muskegon High School varied to some extent in their answers from those who had attended and graduated from schools other than Muskegon High School. It was determined that this variation was caused by the fact that Muskegon High School has in the past years provided a much broader program in vocational education than any of the other high schools in the Muskegon Area Intermediate School District. Therefore, we separated the tabulations of these two groups.

Furthermore, it was discovered that the opinions of the graduates who were still attending or who graduated from a four-year college differed from those graduates who had completed their formal education with less than four years of college and were now working. Therefore, these were also tabulated under separate groupings.

Where variations occur, we will attempt to point out the difference in the thinking of these graduates.

Of all those graduates who are now working and have had less than four years of college, approximately 45 per cent took a college preparatory course in high school. Approximately 25 per cent took what is termed as a general program, about 22 per cent took a commercial course and only 5 per cent took a vocational course. In Muskegon High School, 6 per cent more of the graduates followed a vocational program but in Muskegon High School there were 7 per cent less in the commercial course. Of the graduates who are in a four-year college program or have completed four years of college, 87 per cent of these took a college preparatory course in high school. 82 per cent of Muskegon graduates felt that they were adequately prepared for college. However, graduates of schools other than Muskegon now attending or who have completed four years of college, only 56 per cent felt they were adequately prepared. Approximately 37 per cent of these graduates who are now working and had less than four years of college felt they were adequately prepared for college.

Of those people that are presently working and had taken some vocational course or courses in high school, approximately half are working in a field which is somewhat related to the vocational subjects they took. When asked

if they felt that their high school had a sufficient number of vocational courses available for the workbound youth, 50 per cent of the Muskegon graduates who are now working said yes. Only 36 per cent of those graduates who are now working and attended schools other than Muskegon High School answered "yes". The graduates who are still in college or have finished a four-year degree indicated more strongly for both Muskegon High and fringe area schools that there was a lack of vocational courses available for workbound youth, particularly the graduates of the non-Muskegon schools. Over half of them indicated a definite "no" in answering this question. Very few of the four-year college graduates indicated they would have taken vocational courses if they would have been offered. However, 34 per cent of the graduates of all the schools in the county indicated they would have taken more vocational courses had they been offered. Of all the graduates who are in or have completed four years of college when asked if they have furthered their education in any way, 100 per cent had taken further training in a college or university. However, 25 per cent had received further training on the job in the place of employment.

Of those graduates who are now working with less than a college degree, 38 per cent have had some college or university training--for the most part Muskegon County Community College. 60 per cent have received training on the job in their place of employment. 12 per cent have gone on to military service schools. 12 per cent have attended a trade or technical school. Another 12 per cent have received some training in business college. 6 per cent have taken some additional education in the adult education courses at high school and 12 per cent have availed themselves of correspondence courses. 2 per cent of the Muskegon High graduates have been accepted into apprenticeship training programs while 7 per cent of those working who have graduated from schools other than Muskegon High have been accepted in apprenticeship programs.

When graduates were asked if they felt that their high school prepared them for employment, answers were given as shown in Table 13.

Muskegon graduates again showed that the vocational education that was offered them did help prepare them more adequately for employment. Non-Muskegon graduates show that there is much to be desired as far as course offerings which will prepare youth for employment.

TABLE 13
Opinions of Graduates
On High School Preparation for Employment

	Poor	Fair	Good	Excellent	Never Worked
Muskegon	10	12	44	9	3
Non-Muskegon	10	26	34	11	6

When graduates were asked the question, "If you were a student just entering high school and if you had a choice, what type of program would you pursue?", approximately 1/3 still indicated they would choose an academic program. The other 2/3 indicated a vocational workbound program or a combination of both. Those who were college graduates or still are in college indicated just the reverse of this trend, 2/3 academic and 1/3 a combination of vocational and academic.

Of those graduates who are now working, less than half indicated that they are in a field of work they wanted to stay in. Approximately the same number of graduates indicated an interest in taking more training of a vocational nature. 15 per cent of the four-year graduates indicated an interest in taking more training of a vocational nature. Over half of all the graduates indicated that if they were (or are) a parent today, they would encourage their children to follow a program for the vocational-bound student, assuming adequate facilities were available and that the child showed an interest and was suited for a vocational oriented program. Over half of those who are presently in school or in training indicated that they did not plan to return to Muskegon to work.

Approximately 30 per cent of the graduates changed their vocational choice between grades 9 and 12. Approximately 15 per cent had no choice during that time.

Results of this study would indicate that Muskegon High School has done a better job in providing vocational programs to meet the needs of the high school graduates. However, the findings still show that a great number of these youth had this opportunity and still followed the old pattern of college preparatory courses whether they needed it or not. The fact that only 32 per cent of the graduates went on to a four-year college program indicated a greater emphasis is needed in counseling the present high school youth to consider participation in vocational oriented programs. The study shows that another 30 per cent took additional training at the Community College level. However, emphasis should be placed in job preparation. A need is shown for more programs that are job oriented on the Community College level as well.

In the schools outside of Muskegon High School the need is much greater for added emphasis in vocational oriented programs. The fact that 87 per cent of the graduates had taken college preparatory courses and only 28 per cent went on to a college program shows that many students need to take a good hard look at their educational programs and evaluate their academic aspirations in light of the opportunities available to them in the skilled and semi-skilled areas of business and industry.

To aid these students in their vocational planning and training, serious thought should be given to provide all of the students of Muskegon County the opportunity to attend a vocational center and follow an appropriate vocational training course of study.

CHAPTER V

VOCATIONAL GOALS OF GRADUATING SENIORS

The seniors of the twelve county high schools were surveyed with an occupational questionnaire. This questionnaire had been used for years by the Muskegon High School and the Community College in their Vocational and Technical Education Programs. It has proved to be a very valuable instrument.

A total of 2,134 seniors answered the questionnaire. This was a 96 per cent return.

The survey showed that 774 students or approximately 39 per cent were already a part of the work force on a part-time basis. The types of jobs where seniors were receiving work experience were in such frequently listed positions as grocery carry out boys, gas station attendants, restaurant help, custodial work, clerical jobs, factory work and the trades. Entry type part-time jobs in business, trade, sales, and service occupations are available even at present to the high school student.

The Muskegon students, percentagewise, were more involved in the work experience area. Their vocational training programs provide more of their students the opportunity to enter into work in business, service, trade and retail programs of the area even while attending school.

Three quarters of the students surveyed planned to continue some type of education beyond high school. This large group of students desired careers in fields that require higher education. We wonder if these are realistic ideas that many young people have about their vocational future and their vocational choice. Seventy-five per cent seems too large a percentage for the "college bound".

TABLE 14
Vocational Choices of Graduating Seniors

Professional (requiring 4 years of college)	40 %
Office Occupations	16.7 %
Business Occupations	8.5 %
Technical (requiring 2 years of college)	7 %
Skilled Tradesmen	7 %
Agriculture	7 %
Public Service	3.5 %
Armed Forces	2.7 %
Skilled Industrial Occupations	1.5 %
Building Trades	1.3 %
Transportation	1.1 %
Others or no choice	3.7 %

The 40 per cent aiming for the professions is extremely high since less than 20 per cent of the labor force are engaged in the professions.

The 16.7 per cent headed for the office occupations was a more realistic figure.

The 8.5 per cent for the business occupations was much lower than it should have been. About 25 per cent of our present work force are actively employed in this area. There is a constant demand for these people.

The 7 per cent for technical, skilled trades and agriculture was also about right.

The percentages for public service, armed forces, skilled industrial occupations, building trades, transportation and others were very close to the percentages of the people already in these jobs.

The Muskegon County Community College has a Vocational and Technical Program where students surveyed are shown in Table 15.

TABLE 15

Vocational Choices of Seniors Surveyed

Two-year Secretarial Curriculum	37
Two-year Clerical Curriculum	24
Two-year Business Curriculum	129
One-year Secretarial Curriculum	24
One-year Clerical Curriculum	23
Retailing & Small Business Management	51
Drafting Technology	62
Industrial Technology	30
Automotive Technology	40
Auto Body & Fender Repair	17
Electronics Technology	39
Lab Technology	54

It appears from the results of this survey that there is the necessity for more realistic vocational guidance and the increasing responsibilities of home and school to make the students more aware of the vocational opportunities available to them at less than the "academic" level. The survey indicated that the graduating seniors of Muskegon High School were involved in more work experience programs. Apparently Muskegon High School with its vocational training courses and cooperative training program is providing more to meet the needs of their students.

In-school students, unless they have been exposed to the world of work through home or school, have an unrealistic concept of opportunities and what it takes to be a success in life.

There is an extreme need for guidance counselors, teachers, and parents to explore the majority of job opportunities and encourage programs, courses and individual counseling with youth to alert them to the world of work.

CHAPTER VII

EMPLOYMENT BOUND GIRL - A PROBLEM AREA

Problem of Employment and Preparation for Female Employment

The unemployment rate in the Muskegon area seems high for the female. As of May 17, 1965, these figures were given on number of women seeking employment according to the files of the Muskegon office of the Michigan Employment Security Commission. Under 18 - 16; Ages 16 to 19 - 121; Ages 20 to 21 - 90; Ages 22 to 24 - 93; Ages 25 to 34 - 233.

TABLE 16

Even though many are seeking employment, there are great needs for workers. The knowledge explosion has heightened the responsibilities of the professional workers. These professionals now plan and administer services which are carried out by others. Some of these others are supporting technicians and assistants, and for some, we lack names as yet. Upgrading names of the occupations in some fields has helped alleviate shortages of workers by popularizing the occupation. The needs in numbers of auxiliary personnel brought on by the skyrocketing knowledge explosion also is complicated by the uncertainty of the kinds of service this technician or assistant will be called upon to perform and the educational background they will require. Not many industries perform apprenticeship type programs for these new occupations because of the many positions in that field requiring background knowledge; for example, electronics technicians to service, maintain, and operate the growing list of machines used in medical care, scientific research, and home appliances.

Need of Workers and Where the Supply Will Come From

Our committee listed areas in need of female workers in our communities.

HEALTH OCCUPATIONS
Lab (non-registered) technicians
Aids for elderly care
Hair dressers for elderly
Nurses Aids - Orderly

FOOD INDUSTRIES
Salad Makers
Catering
Baker
Assistant baker
Cooks
Substitute cooks
Specialty restauant operator
Trucking meals

OFFICE
Offset machine operators

MERCHANDISING
Sales in specialized area (fabrics)
Buyers
Window displayers
Storewide advertising
Display assembling
Toy Assembling
Commercial art
Advertisement layout
Personal shoppers for homebound
Part-time florists

MANUFACTURING (Clothing)
Machine operators
Alterations
Tailoring

RECREATION
Organizers of children's activities
Party planning service

RESORTS
Housecleaning
Maids
Babysitting services
Vacation cooks at cottages

MANUFACTURING (Foods)
Food packer
Sorting for preparation
Inspectors

HOMES (Individual)
New mother's helper
Convalescent care
Home aid
Housecleaning
Companion
Temporary cook
Temporary pet care
Gardening

In the 1963 White House Conference on Children and Youth, recognition of the expanding need for professional workers to serve families was shown by the report of the Committee on New and Expanded Services of the President's Commission on the Status of Women. They reported that if mothers were going to simultaneously carry on different kinds of work in the community and home and if we recognized that women had a big stake in keeping the family the core institution of society as it is today, new and expanded community services would be necessary to help them in health, education, safety, recreation, child care, and counseling. Staffing these services would be possible by recruiting and retraining older women to enter the professions and to create subprofessional categories of jobs to free the professionals.

Kind of Training Needed

Emphasis on vocational training for the female should be an acceptance of the changeable occupations fitted for women, the mobility of workers (traveling farther to jobs), and flexible learning situations set up by the cooperation of the employers, technicians or assistants with the experience behind them, and the educators for our constantly shifting work patterns.

Miss Barbara Gaylor, visiting speaker from the State Department of Vocational Education, believes the seven to nine areas of study in the general homemaking classes in high schools are good exploratory background for many occupations. Mrs. Lottie Waterman, from the Trade and Industrial Division of the State Vocational Office, emphasized the need to teach health in high schools to acquaint students with occupations in these areas. She cited Sylvia Porter's column in which 16 of 71 leading jobs that were invariably in need of workers as being health related.

The subcommittee on Employment Bound Girls highly recommended:

In the formation of any facility and/or programs in the area of vocational education, consideration should be given to programs which meet the needs of the employment bound girl. Demand occupations in the health and service areas require trained and qualified women and men.

A strong emphasis must be placed on vocational counseling to inform youth of the many opportunities to be found in employment in the areas discussed in this paper. Every secondary school should provide counselors and the counselors should be informed of these occupational areas.

CHAPTER VII

VOCATIONAL AGRICULTURE SUBCOMMITTEE

The Vocational Agriculture Subcommittee found in its study that several occupational areas still require a substantial knowledge in agriculture related training. The programs at Ravenna, Holton, and Montague have been filling this need to a great extent in past years in the area of farm bound youth. However, because of automation of farm equipment and an increase in occupations which are directly related to sales and service of farm machinery, equipment, and supplies in Muskegon County, the committee recommends that the following more advanced training programs related to vocational agriculture be included within a centralized vocational facility somewhere in Muskegon County. These programs would be desirable for youth and would also aid them in obtaining employment in demand occupations related to agriculture or would aid them in doing a more competent job in managing the farms that still exist in the area.

It is suggested that a course in Farm Management be taught as a three-hour block program approximately one semester in length. Prerequisite for this program would be two or three years of vocational agriculture on the local school level.

Alternating with this program, we suggest a Vocational Agriculture Shop Mechanics program on a three-hour per day, one semester basis. Prerequisite for this program should include the equivalent of one year of bench woods and one year of bench metals.

An additional suggestion includes a program in Conservation and Forestry and also a program teaching Ornamental Horticulture and Floriculture.

Because there are some youth interested in production agriculture who do not attend any of the three schools that offer vocational agriculture, the committee suggests that these students be designated as special cases where the school officials should work out a mutual agreement and allow them to attend the closest of the three schools that would have these courses available. It is estimated that these would be in such small numbers that it would not warrant setting up a new county-wide total vocational agriculture program.

These recommendations would require classroom facilities within the area vocational center suitable for teaching the Farm Management, Horticulture and Floriculture, and Conservation and Forestry. In addition, a suitable farm shop area would have to be included within the complex of the facility and also a suitable area under glass for the teaching of Horticulture and Floriculture. To substantiate the above conclusions, this committee conducted an opinion pole by mail to selected farm operators, farm equipment suppliers, tree growers, and banking and business persons. From the replies received, the committee learned the following:

1. There is still a constant demand for employees in several areas of farm employment.

2. There is a growing demand for youth who have knowledge and training in forestry and conservation.

3. The actual numbers in farm employment has gone down, but the farm economy in the southeast section of the county has shown a constant increase.

4. Employers in the area of equipment, supplies, and machine repair have indicated a growing demand for qualified youth who are schooled in mechanics, who have a farm background, and have a good knowledge of farm economy.

5. In the Parent Opinionnaire, a substantial number of parents in both urban and rural areas indicated a need for training programs in vocational agriculture.

CHAPTER VIII

VOCATIONAL EDUCATION IN TODAY'S SECONDARY CURRICULUM

The Survey-Secondary Subcommittee conducted an extensive study of the curriculum offerings in all of the secondary schools in the county including the two parochial schools. At the same time, a complete inventory of existing shops, classrooms and equipment was taken. This inventory is being kept on file in the office of vocational education in the Intermediate School District and should be valuable information for superintendents and shop teachers to compare the equipment and facilities they have available in their schools with that of other schools in the county.

These studies were conducted in the curriculum areas of homemaking, business, industrial arts, agriculture, and vocational.

In this chapter we shall attempt to show in the following tables the course offerings that were being presented in the school year 1964-65 by each of the 13 secondary schools. The school district of Oak Ridge is not included in the listing as they were not offering classes above the ninth grade level at the time of the study.

It should be noted here that due to the difference in names and titles given to various course offerings and also the practice of some schools to number their courses by semesters (for example, Homemaking I and II in some schools might be first and second semester while in others it would mean ninth and tenth grade level), it was necessary for the committee to do some altering in the numbers of youth who were indicated as participants in these courses. It should be noted further that in the total numbers of youth taking courses in areas such as business education or industrial arts, there would be several duplications. This is true because many youth would be taking more than one course in this subject area in one year. For instance, a girl might be taking Typing II, Shorthand II, Office Machines, and Office Practice all in one year.

Business Education

All secondary schools in Muskegon County are offering a fairly adequate program in teaching two years of typing and shorthand. This is shown clearly in Table 17 shown on the following page.

TABLE 17

	Reeths-Puffer	Ravenna	Muskegon City	Muskegon Heights	North Muskegon	Montague	Fruitport	Mona Shores	Orchard View	Holton	Whitehall	Catholic Central	Western Michigan Christian	TOTAL

The table clearly shows that several schools are not offering business programs in depth to the students in their district. Particularly in the area of distributive education. Most schools have centralized their business curriculum in the area of typing and shorthand. In some of the schools, a large amount of time for typing equipment is taken up by the college preparatory students who are either taking personal typing for one semester or are taking the Typing I course for a full year and then dropping the subject.

It was noted in the study course offerings in some of the schools are broadened due to the interest and ability of the teachers that are employed by the district rather than the needs of the youth.

Table 18 indicates these courses in the area of business education which were considered by the survey committee to be vocational in nature as they were more directly related to training for skills that would be required for occupational competency. It is recognized that Typing I and

and Shorthand I are basic skills and are required to obtain employment. However, the courses listed in the table below are considered to be those that might be reimbursed programs under the terms of the Michigan State Plan and Vocational Act of 1963.

TABLE 18

	Reeths-Puffer	Ravenna	Muskegon City	Muskegon Heights	North Muskegon	Montague	Fruitport	Mona Shores	Orchard View	Holton	Whitehall	Catholic Central	Western Michigan Christian	Total

TOTLAS	46	81	1055	145	128	55	109	232	129	51	34	92	69	2226

The above table clearly shows that Muskegon City is offering courses to those in their district on a much larger scale than all other schools in the district. There is an outstanding need shown for expanding vocational offerings so that they are available to all youth in all districts in the county. The study committee found that even though such courses as office machines and office practice were being offered in every district, the availability of equipment left much to be desired in a number of the schools. Some of the smaller schools were seen to be lacking in space and money for proper office equipment.

Homemaking

Table 19 clearly indicates that most schools are conducting a very full three-year to four-year program in homemaking with Muskegon Heights concentrating theirs into a two-year program in foods and sewing while Catholic Central evidently has only offered courses in sewing. The majority of these programs have been reimbursable programs under the State Department of Education, and have been complying with the standards that have been set forth under the original Smith Hughes Act. Muskegon City in the past few years have extended their homemaking offerings into programs which are more vocational in nature as can be shown on Table 23,

there is a large potential of additional course offerings in the homemaking area which could be more meaningful and more suitable to the needs of the employment bound girl and boy. It would seem too that the number of hours that these facilities are being used in several of the schools that additional programs designed for occupational competency could be taught in some of these facilities.

TABLE 19

Table 20 shows that there is much to be desired in the pre vocational offerings of shop classes in the majority of the secondary schools in Muskegon County. Limited facilities and limited equipment are evidently the main reasons for the small numbers of youth participating in industrial arts programs. In comparing the numbers of youth in each school with the facilities and equipment available, it was found that in most cases all of the facilities were being taxed to capacity. It should be noted that in several of the schools, nothing more than a basic general shop offering is afforded the youth within these districts.

TABLE 20

Table 21 indicates that the selected courses which are being offered, mostly in Muskegon City, which are considered to be more specifically vocational in nature, but are still within the one hour per day length training time. The table indicates that there is a very small offering and a very small number of youth who are being afforded the opportunity to participate in programs of this nature.

TABLE 21

	Reeths-Puffer	Ravenna	Muskegon City	Muskegon Heights	North Muskegon	Montague	Fruitport	Mona Shores	Orchard View	Holton	Whitehall	Catholic Central	Western Michigan Christian	TOTAL

Table 22 shows the numbers of youth who are participating in the three vocational agriculture programs being offered by Ravenna, Montague and Holton High Schools. These three programs have been found to be very broad in their coverage in the subjects involving vocational agriculture and all three instructors are keenly interested in seeing the scope of these programs broadened by joint programs or area-wide vocational agriculture programs.

TABLE 22

Cooperative office training programs are being conducted in the Muskegon area by the Muskegon Public Schools. During the past few years some of the fringe area schools surrounding Muskegon have been participating in the cooperative training program on a tuition basis. There has been a problem in that the outlying schools still cannot participate in this program due to either transportation difficulties or lack of numbers to conduct suitable related instruction classes. Also, some schools are reluctant to pay the tuition fees which are being charged by the Muskegon City Schools. Table 18 shows the numbers of youth participating in the cooperative training programs.

Another problem which has been evident is the number of enrollees in cooperative training programs who have been assigned to one coordinator. Work training programs tend to lose quality in training when the number of enrollees rises to the point where the coordinator is prevented in making frequent checks or visits to the employment training stations. It would appear evident that equal opportunities for vocational offerings is not afforded all youth in Muskegon County. Yet the fact that the majority of the numbers available to employment bound youth in Muskegon County lies within the Muskegon, Muskegon Heights complex and all youth from the county must compete for these jobs. The specific recommendations for a solution to these various problems will be shown in a later chapter.

CHAPTER IX

THE CURRENT ROLE OF THE COMMUNITY COLLEGE IN VOCATIONAL-TECHNICAL EDUCATION

Much effort went into the study of the Community College Curriculum in formulating plans for the new building complex now under construction. Additions to the Vocational-technical curriculum of the Community College have been made periodically during the past ten years. The great majority of programs suggested as need areas in the Business & Industry Survey are now being offered as a permanent part of the curriculum of the Muskegon County Community College.

Muskegon County Community College has been operating as a county-wide, tax supported institution for the past two years. The original Community College was established as a part of the Muskegon Public Schools and operated under the jurisdiction of the Muskegon Board of Education until April 1, 1963. The past two years have seen the program of the Community College expand in its growth. Its enrollment for the 1964-65 school year was approximately 1,600. Present facilities are limited and students at the present time are traveling into several locations within the city of Muskegon to participate in technical programs being offered.

At the time of this writing, there are indications that Oceana County might join into the Muskegon County Community College district. Enrollment figures show that youth attending the Community College come in large numbers from surrounding areas outside of Muskegon County.

The technical programs that are presently being offered are a result of need studies that were conducted by the Office of the Dean of Vocational Education and as a out-growth of courses that were being offered as a part of the vocational and adult education program of the Muskegon City Schools. As increased industrial technology placed demands for more advanced knowledge and skills in political employees, the Community College took on a greater role in providing programs to satisfy these needs.

For the most part, the programs which have been offered at the Community College level have been on the technical level and have been well integrated into the total program and intent of the Community College structure.

Much effort went into the study of the community College Curriculum in formulating plans for the new building complex now under construction. Additions to the vocational-technical curriculum of the Community College have been made periodically during the past ten years. The great majority of programs suggested as need areas in the Business & Industry Survey are now being offered as a permanent part of the curriculum of the Muskegon County Community College.

The following list shows the programs recommended in the Business and Industry Survey and their status as of June 1965.

SUGGESTED PROGRAMS	STATUS
INDUSTRIAL	
Automotive Technician	Presently being offered
Chemical Technician	Offered on cooperative training basis--two-year curriculum being offered
Drafting & Design Technician	Now being offered
Electrical and/or Electronics Technician	Presently being offered
Firstline Supervisory (Management level only)	Being offered in adult education
Instrumentation Technician	New Program at present
Mechanical Technician	Presently being offered
Metallurgical Technician	Adult lecture course at present. New lab being provided in new building construction.
Quality Control Technician	Plans for two-year program being developed
BUSINESS	
Accounting	Presently being offered
Commercial Art	Limited art program now being offered
Data Processing	In early planning stages
Business Management	Periodically offered in cooperation with small business administration on adult level

Merchandisers, Outside Sales, Retail Management & Buying and Sales Management	Presently are being offered in the business administration or distributive education program.
Secretarial	Both one- and two-year programs offered
HEALTH-MEDICAL	
Medical Lab Technician	No offerings at present
Nurse (Practical)	Presently being offered
Nurse (R.N.)	In talking stages of being part of the Community College curriculum
Medical Office Secretary and Assistants	Offered on individualized basis

As new demands are placed on the vocational-technical levels, the Community College has always been willing to develop a new curriculum to meet the needs of business and industry in the Muskegon area.

In addition, the Department of Vocational Education of the Community College has been operating vocational training programs for the unemployed and under employed under the provisions of the Manpower Development and Training Act. These are being offered in cooperation with the Michigan Employment Security Commission and the State Department of Education, Division of Vocational Education.

Muskegon's programs have been noted on several occasions as one of the state's finest and the percentage of those who have found employment through this training has constantly been high.

Table 24 shows the course offerings at Community College during the 1964-65 school year.

March 25, 1965

MUSKEGON COUNTY COMMUNITY COLLEGE
SEMI-PROFESSIONAL PROGRAMS
BUSINESS, TECHNICAL, VOCATIONAL

	Present Facility	Future Facility
I. BUSINESS		
A. Two-year program Retailing & Small Business Management	Hackley Building	2 rooms in new college
B. Two-year Secretarial One-year Secretarial	1-Typing room 1-Shorthand room	Larger and more appropriate rooms in new college
Two-year Clerical One-year Clerical	1-Office Machines room all in Hackley Bldg.	"
C. Two-year Accounting	1-Accounting room-Hackley	"
D. Cooperative Training 2nd year-1/2 day work experience	1-Office in the Hackley Bldg.	Repeated in new college

	Present Facility	Future Facility
4. Industrial Technology Mechanical-Production	1-Machine Shop with small classroom at Wilson Branch	Enlarged Lab & lecture room in new college
Additional courses for the above areas		
1. Foundry	Hackley Manual	New college
2. Welding	Hackley Manual	New college
3. Sheetmetal	None at present	New college
4. Metallurgy	None at present	Lab in new college
5. Hydraulics	1-Classroom in Wilson Branch (Evening)	Lab in new college

CHAPTER X

VOCATIONAL NEEDS IN SPECIAL EDUCATION

The Special Education Subcommittee was more active in the earlier stages of the formation of the Muskegon County Vocational and Technical Committee through the personnel of the special education staff of the Muskegon Area Intermediate School District. Much progress was made during the past year. The Muskegon Area Intermediate School District has received approval for a special grant in the amount of $40,897 for the purpose of conducting a demonstration project in vocational education for the high school age mentally handicapped youth in Muskegon County. The year 1966 will see the beginning of construction of a facility for high school youth in need of special education and vocational training. The Muskegon Area Intermediate School District has entered into a contract with the Orchard View School District to construct the facility to be used for this program.

Muskegon County can be extremely proud of the progress made in the past five to six years in the area of special education. The extensive program for the great number of these youth who need special attention and training is recognized as one of the better programs in the state of Michigan. The cooperative efforts of all school districts and numerous agencies interested in special education for mentally and physically handicapped present an example of what can be accomplished in the field of vocational education.

The fact that the personnel who are active in the field of special education have seen the need for vocational training for these youth with special needs amplifies the need for all youth to have the opportunity for education for occupational competency.

CHAPTER XI

SUMMARY & RECOMMENDATIONS

This chapter presents the general summary and recommendations of the findings in all of the surveys as well as the several discussions held in committee meetings.

1. The needs of youth in Muskegon County are no different than those from any other part of our nation. With the changes in the technical and social environment and the rapidly changing needs of business and industry, it is extremely evident that a new concept in education for employability is urgent.

2. Seventy per cent of those youth who are graduating from our secondary schools are in need of training programs on either the secondary or 13th and 14th grade levels to provide them with salable skills.

3. Another 28 per cent of youth who enter the 9th grade but never complete school are in need of the opportunity to be trained in a salable skill and be encouraged, through greater opportunity, to stay in school.

4. Our youth in high school have a great need for increased vocational guidance. There appears to be a false impression among students as to the needs of the labor market. Social, family and school pressures tend to create the idea that only a college education will bring success in life.

5. Emphasis should be focused on the needs of the employment bound girl. Our greatest unemployment rate is centered in the 18 to 21 year old female.

6. New concepts in the area of vocational agriculture should center on farm machinery maintenance and repair, horticulture, conservation and forestry.

7. Expanded programs and opportunities for training should be afforded our youth to adequately prepare them and equip them with skills needed in machine trade occupations, building trades, electronics, food service, and many other expanding occupational areas.

8. Present programs in our secondary schools do not provide these opportunities to all youth in the county. The present day curriculum in industrial arts, business, homemaking and agriculture does not adequately provide the skills now required by local business and industry or the labor market areas that our youth migrate to.

9. Present facilities in the county are entirely inadequate to present the desired programs in the vocational-technical areas of education.

10. The County Community College is now expanding and putting increased emphasis on technical training to provide additional programs in several areas; however, the needs of youth in grades 10, 11, and 12 will not be provided through this expansion. Vocational education on the secondary level is wholly inadequate.

11. An area vocational center, for youth in grades 10, 11, and 12, as well as adults and advanced vocational students, is recommended to be established in the Muskegon Area.

This facility should be centrally located and available, and tuition free to all youth, both public and parochial, who reside within the Muskegon Area Intermediate School District.

12. Students attending this facility should remain half time with their local district. Scheduling should become flexible enough for all youth. This flexibility should allow a student to be placed by guidance counselors into programs of various skill levels which would be designed to fit the needs, and abilities of the individual.

In the following pages, we will attempt to briefly recommend to the several constituent districts of the Muskegon Area Intermediate School District how each area of business, industrial arts, and homemaking might be patterned to feed students into the offerings at the proposed area vocational center.

In concluding this chapter, we attempt to show the recommended organization of an area vocational facility. This is shown in Figure 4.

The listings following the organizational chart show recommended curriculum for the area center. It should be noted that for each area of vocational education, advisory committees will be the key group to aid in recommending curriculum and course content; therefore, we submit these listings only as a suggested guide.

Final recommendations as presented to the Board of Education of the Muskegon Area Intermediate School District by the Muskegon County Vocational & Technical Committee are shown on pages 55 and 56.

Business Education Recommendations

All secondary schools within the area are doing a fairly adequate job of teaching two years of typing and shorthand. The committee recommends

that the area vocational facility concentrate its effort on office machines in the nature of a three-hour block time office workshop program which would serve as an advanced program for clerk-typists and stenographers. This course could also serve as the feeder program for coordinated work experience programs or cooperative training. Also in the office training area, it is suggested that the area vocational school concern itself with advanced bookkeeping. This would mean that the local school districts would still be totally responsible for the 9th, 10th, and 11th grade programs in office occupations. Local districts in curriculum planning should look into the possibility of increasing course offerings in such areas as business law, business English, business math and improved general business programs on the business level. In the area of distributive occupations, it is recommended that the area vocational facility concentrate heavily in the advanced courses such as merchandising, display, etc. The local schools should be encouraged to offer at least one prerequisite distributive education course such as retailing or salesmanship. This would mean that schools such as Reeths-Puffer, North Muskegon, Montague and Fruitport should seriously consider adding retailing to their curriculum.

Homemaking Recommendations

All constituent schools would appear to be offering a full program in homemaking and most schools, other than Muskegon High, seem to be offering the same standard program. Muskegon High School's program has been extended to provide programs which train for specific occupational skills related to the homemaking departments in the several constituent schools consider changes in their program so that more homemaking is offered in the 7th and 8th grade level and that the basic homemaking course be offered in the 9th and 10th grade levels. This would allow the student to progress into specific vocational programs in food service, tailoring and health occupations. It is further suggested that increased emphasis and study be placed on courses in health occupations at the lower grade levels.

The area vocational center should offer programs in food service, advanced tailoring, nurse aid-orderly and other health occupation programs. These would supplement or add to the homemaking programs on the local level.

Industrial Arts Recommendations

The curriculum suggested for the area vocational facility is an industrial-type program designed for training in occupational competency in the many skill areas. This would still require students who enroll in these programs to have basic knowledges acquired in industrial arts courses which should be taught at the local school level. For instance, a person

enrolling in the machine shop day trade program in an area vocational school should have at least one year of metal working and machine shop in an industrial arts program. Also, a student enrolled in day trade auto mechanics would have to have taken at least one year of auto mechanics or power mechanics on the local level. This points to this committee's recommendation that each of the local constituent school districts study carefully their present curriculum to see where they might be dificient in providing all of the industrial arts programs which will ultimately be required of young people to adequately prepare them for the more advanced vocational courses.

Recommendations for Cooperative Training

At present the only cooperative training program being conducted in the Muskegon area is being operated by the Muskegon Public Schools. During the past few years, the fringe area schools surrounding Muskegon have been participating in Muskegon's program on a tuition basis.

There has been a noted problem in that the outlying schools still cannot participate in this program due to either transportation difficulties or lack of numbers to conduct suitable related instruction classes. Also, some schools are reluctant to pay tuition fees charged by the Muskegon Schools.

Another problem is the number of enrollees in cooperative occupations per coordinator. Programs tend to lose quality in training when the number of enrollees get to the size which prevents coordinators from making frequent checks on employment training stations.

This committee recommends that secondary cooperative training programs be conducted and operated from a central location (area vocational center) and be made available, tuition free, to all youth in the area. Coordinators should be given office space and counseling areas in this facility.

These coordinators would be the only liaison for secondary schools who contact business and industry in the area. The coordinator's role should also be directly connected with placement and follow-up of all vocational programs on the secondary level.

Related instruction classes should be conducted under the authority of the area vocational school.

The role of the area cooperative training office and placement office is a key function in the success of a quality vocational school. The personnel in this office are to handle the main line of communication between business and industry and the school.

MUSKEGON COUNTY VOCATIONAL AND TECHNICAL COMMITTEE

Muskegon, Michigan

TO: Board of Education
Muskegon Area Intermediate School District

FROM: John Medendorp, Chairman
William Hanichen, Secretary
Steering Committee - Vocational
and Technical Committee

SUBJECT: Resolutions and Recommendations

DATE: September 10, 1965

WHEREAS the Muskegon County Vocational and Technical Committee has met in general session on September 9, 1965, with 46 members present and

WHEREAS subcommittee reports were submitted to the committee at this meeting--these reports containing summaries of all the pertinent data and findings from the several surveys and studies that were conducted in the Area Vocational Study for Muskegon County and

WHEREAS the above reports were followed by questions and discussion on the findings and recommendations of the Steering Committee of the Muskegon County Vocational and Technical Committee, therefore be it

Resolved, that the Muskegon County Vocational and Technical Committee submit the following recommendations to the Muskegon Area Intermediate School District Board of Education for their consideration.

RECOMMENDED:

1. That a unified program of vocational-technical education be established and be made available to all secondary students, public and non-public, attending school and residing within the Muskegon Area Intermediate School District.

2. That this unified program be established and operated within a centrally located facility.

3. That the Board of Education take necessary steps to call for a special election requesting the people of the Muskegon Area Intermediate School District to approve a millage levy of a sufficient amount to allow the construction, equipping, maintenance and operation of said facility and programs.

4. That the Muskegon Area Intermediate School District Board of Education enter into a contractual agreement with a constituent school district to operate said facilities.

5. That the Steering Committee go on record advising the Intermediate Board of Education that they appoint an advisory committee of approximately 12 persons to work with the Office of Vocational Education in the Intermediate School District in the formulation of more specific plans for the design and construction of the proposed area vocational center. This committee should be composed of persons knowledgeable of school construction, vocational facility design, and vocational needs and should be charged with the responsibility of making more specific recommendations as to the size, equipment, location, and construction of such a vocational center.

And be it further

Resolved, that the Muskegon County Vocational and Technical Committee offer its continued services to assist in the task of publicizing the needs of vocational and technical education in Muskegon County to the people of the Muskegon Area Intermediate School District, in order to obtain a positive reaction to this much needed and worth-while program.

On behalf of the Vocational and Technical Committee, we express our sincere wishes to the Muskegon Area Intermediate School District Board of Education and to the people of the Muskegon Area Intermediate School District in the accomplishment of the goals set forth in these recommendations.

vc

CHAPTER XII

IMPLEMENTATION

When the several surveys and questionnaires were tabulated and findings appeared to indicate the need for an area concept in vocational education, the committee on Legislation and Finance studied methods that might be used to implement these recommendations.

The following summary of their findings is presented.

1. The Intermediate School District cannot legally operate a program of this type; however, it can designate a constituent district or districts to construct, maintain, and operate such a program.

Section 2, Act 35, P.A. 1951, as interpreted by the Attorney General, enables municipal corporations to combine, through contract or otherwise as may be permitted by law, to own and operate any property, facility or service which each would have the power to do separately. Under Section 2 of the Act, these municipal corporations have the right to contract with another municipal corporation to furnish the property lying beyond the corporate limits and for an adequate consideration any lawful municipal service to property within its limits.

2. Federal funds for a project of this type are available up to fifty per cent of the cost under the Vocational Training Act of 1963 with the community providing a matching fifty per cent of the cost.

3. The matching funds could best be obtained from a county-wide millage vote. These funds could be used for construction, operation, maintenance, purchase of equipment, transportation, and/or other expenses involved in operating a vocational training program. One mill would raise approximately $500,000 and two mills would raise approximately $1,000,000.

4. It is also possible that additional funds may be obtained from: (a) M.D.T.A.; (b) Economic Opportunity Act (Poverty Act); (c) Elementary and Secondary Education Act of 1965. (These would only be available for special programs which qualify under each specific act.)

5. Any such facility such as an area vocational center may be operated by a school district outside of its own boundaries.

6. State aid for half time students would be retained by the sending district. (Opinion of the State Department of Education, Mr. Harold Brown and Mr. Leon Alger) (Pending changes in state aid formula.)

7. Additional legislation may be required to enable the establishment of area vocational centers.

APPENDIX A

CONFIDENTIAL CONFIDENTIAL

MUSKEGON COUNTY VOCATIONAL STUDY
Business and Industry Survey

Introduction: The purpose of this questionnaire is to gather information and opinions from business and industrial employers to use in improving educational programs for employment-bound youth in the Muskegon County area. You can help by completing the questionnaire as completely as possible. The results will be used for statistical analysis and your firm will not be identified in any published reports.

Special Note: Except for large firms, the completion of the questionnaire will require only a few minutes. Study the heading of each section. If it is applicable to your firm, please check or fill in the information; if not, proceed to the next section.

PART I -- General Information

1. Firm Name _____

2. Mailing address _____

3. Name of person reporting _____

4. Your job title _____

5. Telephone number _____

6. Please check the space opposite the description which best identifies the activities of your firm. Check more than one if needed.

_____ 1. Agricultural services
_____ 2. Advertising
_____ 3. Banking and finance
_____ 4. Communications
_____ 5. Construction
_____ 6. Education

PART IV - Employer Opinion and Practice

A. With respect to the requirements of your firm for entry employment, in what job categories do you employ young persons who have "dropped out" without finishing high school? Please put check marks under the headings which best describe your firm's operating policies.

Entry job category	Frequency of employment		
	Common Practice (1)	Infrequently (2)	Almost Never (3)
1. Highly-skilled jobs			
2. Business office jobs			
3. Sales jobs			
4. Apprenticeship for the highly-skilled trades and crafts			
5. Semi-skilled jobs (assembly line and production workers, machine operators)			
6. Service jobs			
7. Unskilled labor			

B. With respect to the requirements of your firm for entry employment, in what job categories do you employ young persons who have just graduated from high school? Please put check marks under the headings which best describe your firm's operating policy.

Entry job category	Frequency of employment		
	Common Practice (1)	Infrequently (2)	Almost Never (3)
1. Technician jobs			
2. Highly-skilled jobs			
3. Business office jobs			
4. Sales jobs			
5. Apprenticeship for the highly-skilled trades and crafts			
6. Semi-skilled jobs (assembly line and production workers, machine operators)			
7. Service jobs			
8. Unskilled labor			

C. Recalling the employing practices of your firm for the past five-year period, which one of the following statements best describes your evaluation of young persons who have applied for entry jobs with your organization? Please check one.

_____ (1) We have employed a number of young non-high school graduates, and we have found they can perform satisfactorily in the following jobs: (Specify)

_____

_____

_____ (2) We have employed a number of young non-high school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.

_____ (3) We have found young non-high school graduates unsatisfactory for the following reasons: _____

_____

_____

_____ (4) Most young high school graduates who apply seem reasonably well prepared for entry employment, and we have employed them as openings have occurred.

_____ (5) We have employed a number of young high school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.

_____ (6) We have found it inadvisable to employ young high school graduates, except for unskilled jobs.

_____ (7) The nature of most of the entry jobs in our firm is such that young high school graduates are vitually unemployable because of a lack of occupational education and training.

D. To what extent do existing educational facilities in the Muskegon County area meet the occupational and training needs of your company or firm?

_____ (1) Very well _____ (2) Fairly well _____ (3) Poorly

E. If you think occupational education and training in the area need improvement, which of the following developments would you support? (Please check, more than one if you like)

_____ (1) Substantial expansion of vocational education programs in the existing high schools.

_____ (2) Creation of an area vocational center for secondary (high school) occupational training.

_____ (3) Expansion of the 2-year community college with a strong program of occupational education.

F. Would you and your firm be interested in participating in discussions or further study of plans for improving occupational education and training at high school and post-high school levels in Muskegon County area?

_____ (1) Yes _____ (2) No _____ (3) Undecided

G. Is there a formally organized training program in your company or firm?

_____ (1) Yes _____ (2) No

H. If "yes", please check each type of program you now operate on a formal basis.

_____ (1) Apprenticeship
_____ (2) Supervisory training
_____ (3) Technician training
_____ (4) Plant management
_____ (5) Job upgrading
_____ (6) Executive development

Other (Write in below)

_____ (7) _____
_____ (8) _____
_____ (9) _____

I. General comments: (Add any comments which you, or other officials of your firm, may wish to make about the improvement of education and training opportunities in the Muskegon County area. Include in your suggestions the kind and level of educational programs which should be provided.

Please return this questionnaire at once.

Thank you for your interest and cooperation.

Muskegon Area
INTERMEDIATE SCHOOL DISTRICT
February 19, 1965

Please return by Friday, February 26, 1965

Dear Sir:

We are working on improvement of vocational-technical training for the youth of Muskegon County which will affect your employees in the near future. Before we can solve this problem, we need some information from you.

The enclosed questionnaire is a "trial run" survey.

The members of the Muskegon County Vocational and Technical Committee are requesting that your firm take the time to fill out the form and check only those areas that pertain to your business. We would also ask that you, or your personnel department, give a quick reaction to this questionnaire on the last page.

Unless the format of this survey changes drastically, we will not solicit your firm again when the "trial run" is over and we undertake the complete study.

This information is important for the training of your future employees and very necessary in planning for adequate vocational and technical training for all youth of Muskegon County. Your cooperation will be appreciated.

Sincerely,

Subcommittee on
COMMUNITY INVOLVEMENT
Muskegon County Vocational
and Technical Committee

Item A - 3 Cover Letter for General Mailing of Business and Industry Survey

Muskegon Area
INTERMEDIATE SCHOOL DISTRICT
March 12, 1965

PLEASE RETURN BY FRIDAY, MARCH 19, 1965

Dear Sir:

We are working on improvement of vocational-technical training for the youth of Muskegon County which will affect your employees in the near future. Before we can attempt to solve this problem, we need some information from you.

The members of the Muskegon County Vocational and Technical Committee, many of them businessmen like yourself, are requesting that you or your personnel director take the time to fill out this form and check only those areas that pertain to your business. For the majority of businesses, this should only take a few minutes.

This information is important for the training of your future employees and very necessary in planning for adequate vocational and technical training for all youth of Muskegon County. Your cooperation will be appreciated.

Sincerely,

Subcommittee on
COMMUNITY INVOLVEMENT
Muskegon County Vocational
and Technical Committee

vc

A week ago we sent you a copy of the Muskegon Area Vocational Study under a cover letter from Mr. Joe Anthony, Vice-President of Brunswick Corporation. We realize that you are very busy or perhaps there was an oversight; but to date, we have not received your reply.

You might be interested to know that in the sampling that we have conducted to date, we have received almost 65 per cent of the returns from major industry and business. This fine cooperation verifies our feelings that this is important to the over-all economy, as well as the future of the education of our area youth.

We hope that you still have your copy of the questionnaire or maybe you have already sent it in. If you have mislaid it and would like an additional copy, please call us at PA 6-4711, Extension 250, and we would be most happy to supply you with a new form.

For the Muskegon County Vocational
and Technical Committee,

Harold S. Fisher, Vocational Consultant
Muskegon Area

APPENDIX B

Muskegon Area
INTERMEDIATE SCHOOL DISTRICT

Area Vocational Study
Parent Survey

Please Check One Answer Only

1. In your opinion, are high school students adequately prepared by the schools to select a vocation?
Yes (1) _____ Fair (2) _____ No (3) _____ No Idea (4) _____

2. In your opinion, is the guidance and counseling program helpful to students who are in high school?
Yes (1) _____ Fair (2) _____ No (3) _____ No Idea (4) _____

3. In your opinion, are schools providing opportunities for high school students to learn a vocation?
Yes (1) _____ Fair (2) _____ No (3) _____ No Idea (4) _____

4. In your opinion, is there a need for additional vocational programs on the 11th and 12th grade levels?
Yes, many (1) _____ A Few (2) _____ None (3) _____ Don't Know (4) _____

5. If we were to expand the types of vocational training that will be available to your child, what kinds of courses would you like to see taught? (Check any number)

Group I
_____ (1) Machine Tool
_____ (2) Welding
_____ (3) Foundry
_____ (4) Automotive
_____ (5) Woodworking

Group II
_____ (1) Building Trades
_____ (2) Appliance Repair
_____ (3) Graphic Arts (Printing)
_____ (4) Electronics
_____ (5) Data Processing

Group III
_____ (1) Business Machines
_____ (2) Retail & Sales
_____ (3) Food Service
_____ (4) Hospital Aids
_____ (5) Medical Technology

Group IV
_____ (1) Agriculture
_____ (2) Work Attitudes
_____ (3) _____
_____ (4) _____ (Others)
_____ (5) _____

6. In order to provide adequate training in the above vocational courses, additional buildings and equipment will be needed.

In your opinion (check one):

_____ (A) Should existing vocational classrooms and shops be expanded in order to accommodate students from all school districts, or

_____ (B) Should we build a new vocational school centrally located and available to all students in the Muskegon County area?

7. The type of instruction, equipment, and buildings needed for vocational-technical training is costly. In your opinion would this be more easily accomplished by:

_____ (A) County-wide millage for financing
_____ (B) Local school millage for financing

8. Providing that your children are not interested in college and if a quality vocational program were made available to them, would you encourage them to avail themselves of this kind of training?
Yes (1) _____ No (2) _____ Possibly (3) _____

9. Are you concerned about the student dropout problem?

Yes (1) _____ No (2) _____ Don't Know (3) _____

10. Would broadening the vocational opportunities in high school keep students in school longer?
Yes (1) _____ No (2) _____ No Effect (3) _____ Don't Know (4) _____

11. If we have vocational programs as discussed above, would you be interested in attending evening school to improve your own abilities?
Yes (1) _____ No (2) _____ Don't Know (3) _____

12. This questionnaire was filled out by: Mother (1) _____
Father (2) _____ Both (3) _____ Guardian (4) _____

13. The head of our household works in the greater Muskegon area (1) _____
Elsewhere in Muskegon County (2) _____ Other (3) _____

14. The head of our household is: (Check one)

_____ (1) Self employed
_____ (2) Professional
_____ (3) Management
_____ (4) Office Worker
_____ (5) Skilled Worker
_____ (6) Semi-Skilled Worker
_____ (7) Laborer

Muskegon Area

INTERMEDIATE SCHOOL DISTRICT

Area Vocational Study

OPINIONNAIRE

Dear Parent:

The Muskegon Area Intermediate School District is conducting a county-wide school study of vocational and technical training. This study is designed to find ways of providing the best educational program to suit the needs of all youth on a county-wide basis.

We would like you to help us by answering the attached questionnaire.

Please imagine that your fifth grade child may be one of the 6 out of 10 students who will not enter college--or may even drop out of school before completion. Give us your opinion, even though you may not have had first-hand experience with vocational training.

We appreciate your cooperation. Please have your child return this to his teacher by Friday.

Muskegon County
Vocational & Technical Committee

READ THIS BEFORE ANSWERING THE ATTACHED OPINIONNAIRE

Facts on Employment and Training

I. Out of every 10 students entering high school,

3 will not graduate
3 will go to work after graduation
4 will continue their education beyond graduation,
Only 2 will complete 4 years of college

II. One out of every 5 boys, ages 16 to 19, who looks for work fails to find it, yet jobs requiring skills are unfilled.

III. Vocational courses are those which train young people and adults to provide them with a salable skill, so they can get a job.

IV. Statistics show that the unemployment rate is 3 times higher in young people who have not had vocational training than in those who have.

V. Neighboring school districts in the nation are cooperating to provide "area" vocational schools and programs to solve the problems.

VI. All the high schools in your county and the Muskegon County Community College are participating in this study to see how we might attack the problem here.

APPENDIX C

74 Item C - 1 Cover Letter for Curriculum & Facilities Survey

MUSKEGON COUNTY
VOCATIONAL AND TECHNICAL COMMITTEE
Subcommittee on Secondary School Facilities
April 1, 1965

You are no doubt aware of the current study being made by the schools and lay people of the Muskegon area concerning the needs of vocational and technical education.

As the coordinator for the committee studying the secondary school facilities, we would like for you, through your principals, to enlist the aid of members of the various departments concerned such as industrial arts, vocational, home economics, business education, etc., in completing the enclosed questionnaire.

Enclosed please find a self-addressed envelope for your convenience in returning these forms. If these could be completed and returned within the next two weeks, it would be greatly appreciated.

If there are any questions, please feel free to contact us at PE 6-3411, Extension 33.

Sincerely,

Gerrit Wiegerink, Chairman Herman Stephens, Coordinator

CURRICULUM

Please place an "X" under the appropriate grade level or levels if your school offers these subjects listed at the left of the page and if this is a full year course.

At the right, check either pre-vocational or vocational classes as the case may be. Generally speaking, we will class pre-vocational classes as those one hour in length; vocational classes would be those classes two hours or more in length.

Also, please give the total number of students enrolled in each subject. Check only those subjects offered one semester or more. If classes are not listed, write them in. If your classes are only one semester classes, then indicate which semester it is offered. If it is a one semester course, but is offered both semesters, please indicate with a "1" in each semester.

	7		8		9		10		11		12		Pre.		Total
	1	2	1	2	1	2	1	2	1	2	1	2	Voc.	Voc.	Enrolled

Rooms

Please list all rooms used for vocational or pre-vocational classes. This would include vocational shops, industrial arts shops, business, home ec. rooms or any rooms which may be serving a dual purpose.

If you are not sure, please list the room and make a note as to its use.

Below is a sample.

Room Name: Wood Shop

Size (Estimated): -- 30 x 30

Age, Condustion: Built 1940 Remodeled 1960

Use: 7, 8, and 9th grades, industrial arts 1 class arts & crafts

Number	Description	Year	Cost	Estimated Value
2	Logan 8" Shapers 1/2 H.P. 3 Phase Motor Model E88T - 1/2	1963	$937.00	$800.00
1	Hunter 6 x 12 Surface grinder complete with 3/4 H.P. Motor No. LP 152	1960	$985.00	$700.00
1	Hunter 5 x 10" permanent magnet for above No. LP 152	1960	$180.00	$150.00

APPENDIX D

MUSKEGON COUNTY VOCATIONAL & TECHNICAL COMMITTEE
AREA VOCATIONAL STUDY
Graduate Follow-up Questionnaire

Mark your answers to the following questions on the enclosed answer card.
Drop the card in the mail at your earliest convenience.

Answer only if question applies to you.

1. Check program of study followed in high school.

   1a. General 1b. Vocational 1c. Commercial 1d. College Prep

2. If in college or have completed your education, do you feel you were prepared for college as a result of your high school experience?
   2a. Yes 2b. No 2c. No Opinion

3. If you had made a vocational choice on graduation from high school, are you now engaged in this type of work at present?
   3a. Yes 3b. No 3c. No choice at that time

4. Is your present work related to any vocational-type courses you took in high school?
   4a. Yes 4b. No 4c. Didn't take any vocational courses

5. Do you feel that your high school had a sufficient number of vocational courses available for the work-bound student?
   5a. Yes 5b. No 5c. Don't know

6. Would you have taken more of these vocational type courses had they been offered?
   6a. Yes 6b. No 6c. Don't know

7. What type of further education or training have you received since graduating from high school? Check all that apply.
   7a. On the job training at place of employment
   7b. Business College
   7c. Trade or technical schools
   7d. Adult education course at high school
   7e. College or University
   7f. Correspondence Course
   7g. Military Service School
   7h. Apprenticeship

8. If you entered employment (full time or part time) after high school graduation, in your opinion, to what extent did your high school prepare you for employment?
   8a. Poor 8b. Fair 8c. Good 8d. Excellent 8e. Have never held a job

(Please complete this questionnaire on the reverse side)

9. If you were a student just entering high school and if you had a choice, what type of program would you pursue?
   9a. Academic-college bound program of study
   9b. Vocational-work bound program of study
   9c. Combination of both

10. If you are now working, is this the field of work you want to stay in?

    10a. Yes 10b. No 10c. Undecided

11. Are you interested in taking more training of a vocational nature?

    11a. Yes 11b. No 11c. If yes, what area?

12. If you were (or are) a parent today, would (will) you encourage your children to follow a program of study for the vocational-bound student. (Assuming adequate facilities were available and if your child shows an interest in and seems suited for this particular kind of program?)
    12a. Yes 12b. No 12c. Undecided

13. If you are presently in school or in training, do you plan to return and work in Muskegon County?
    13a. Yes 13b. No 13c. Undecided (If yes, what kind of work?_____)

14. Did you change your vocational choice between grades 9 and 12?

    14a. Yes 14b. No 14c. Had no choice

School Graduated From _____ Year _____

Present Job Title _____

MUSKEGON AREA

INTERMEDIATE SCHOOL DISTRICT

Dear High School Graduate:

The Muskegon County Intermediate School District is presently involved in an Area Study of past and present vocational and technical training at the high school level. The results of this study could determine the future course of vocational and technical education for the entire Muskegon area. The project is a cooperative effort including business, industry, and education with several committees studying various phases of the problem.

Our committee has been given the job of surveying present high school Seniors and also the task of conducting a "follow-up" study of all the graduates of Muskegon County high schools for the 1959, 1961, and 1963 school years. The present Seniors will be surveyed soon. The Graduate Follow-up Survey is where you become part of the picture. We need your whole-hearted cooperation.

You, individually, can make a very important contribution. Your participation is needed. The information you furnish is a valuable part of the study. We would appreciate your taking a few minutes to answer the questions on the attached questionnaire.

Please answer on the enclosed self-addressed, stamped post card and mail it at your earliest convenience. Your signature is not needed, although you may sign it if you so desire. The identification information requested is needed for our tabulation and evaluation.

Thank you for your time and effort.

Sincerely yours,

Muskegon Vocational & Technical Committee
Survey-Graduate Follow-up Subcommittee

John Jozsa, Coordinator Jerry Sielski, Chairman

OCCUPATIONAL QUESTIONNAIRE

_____, 19___

Name _____ Address _____ Home Room No. _____
(Print last name first)

Grade _____ Birth Date _____ Height_____ Weight_____ Phone _____
(Include year)

In what field of training are you specializing in high school? _____

Parent or Guardian _____ Occupation _____ Place of Employment _____

Are you employed at present? _____ If so, where? _____

How did you obtain this job? _____

If employed, what type of work do you do? _____ Have you a work permit? _____

How long have you worked on this job? _____ Hours per week? _____

Are you interested in part-time work next school year? _____ If so, in what field would you like to work? _____ Office, _____ Retail, _____ Trade & Industrial, _____ Other (explain)_____

_____

Do you plan to continue school after graduation ?_____ If you do, what school do you plan to attend?_____ In what field do you plan to take your training? _____

* * * * * * *

Of the occupations listed below, which <u>single</u> field of work do you plan to follow for your lifetime work after graduation? Place an "X" in the space at the left of the group of your first choice and underscore or write in the <u>specific</u> job you like best in the group.

_____ Business occupations - saleswork, retail selling, wholesale selling, insurance, display, advertising, store management, real estate, self-owned business, (other) _____

_____ Office occupations - general office, stenographer, key-punch operator, secretary, bookkeeper, office manager, (other) _____

_____ Professional (requiring at least 4 years of college) engineering, nursing, medicine, accountant, lawyer, journalist, architect, dentist, teacher, minister, scientist, (other) _____

_____ Technical (requiring 2 years of college) tool designing, drafting, electronics, automotive, (other) _____

_____ Building trades - plumber, electrician, painter, carpenter, bricklayer, sheet metal worker, (other) _____

_____ Skilled tradesman - tool and die maker, jeweler, baker, barber, beauty operator, machinist, dry cleaner, draftsman, printer, moulder, coremaker, pattern maker, electrician, (other) _____

_____ Skilled industrial occupation - machine operator, inspector, foreman, set-up man, maintenance worker, (other) _____

_____ Mechanical repair - auto mechanic, refrigeration repair, radio and television repair, electronics, (other) _____, auto body repair, tire repair, electric motor repair, office equipment repair

_____ Public Service - social worker, Y.M.C.A., Boy or Girl Scout advisor, law enforcement, public office, personnel work, (other) _____

_____ Transportation - pilot, stewardess, bus driver, truck driver, cab driver, railroad engineer, (other) _____

_____ Agriculture - farmer, horticulturist, (other) _____
_____ Armed Forces (as a career) - Army, Navy, Marines, Air Corps (other) _____
_____ Other occupation (Explain) _____

NOTE: If you are a senior and are planning to attend Muskegon Community College next fall, check the following questions.

MUSKEGON COMMUNITY COLLEGE
TWO-YEAR COURSES

Please check the area in which you would like additional information.

☐ 1. Two-Year Secretarial Curriculum (Shorthand)
(Work experience optional)

☐ 2. Two-Year Clerical Curriculum (No Shorthand)

☐ 3. Two-Year Business Curriculum (Accounting)
(Work Experience Optional)

☐ 4. One-Year Secretarial Curriculum (For students with high school Shorthand)
(Work Experience Optional)

☐ 5. One-Year Clerical Curriculum (For students with high school Typing)

☐ 6. Retailing & Small Business Management
(Work Experience Optional)

☐ 7. Drafting Technology (Drafting major)

☐ 8. Industrial Technology (Machine Processes major)

☐ 9. Automotive Technology (Automotive Repair major)

☐ 10. Auto Body & Fender Repair

☐ 11. Electronics Technology (Electronic Controls major)

☐ 12. Lab Technology
(Prepares for work in industrial labs)

Note: Under certain conditions cooperative work experience credit may be allowed in any of the courses listed.

APPENDIX F

REPORT ON VISITATION TO DETROIT AREA VOCATIONAL SCHOOLS

Ed Bujak, Plant Engineer
Brunswick Corporation - Muskegon

Howard Bredin, Business Instructor
Reeths-Puffer High School - Muskegon

Harold S. Fisher, Vocational Consultant
Muskegon Area Intermediate School District

On April 28 and 29, 1965, the above persons conducted an extensive visitation to three vocational institutions operated by the Detroit Public Schools; namely, the Skills Center, Wilbur Wright Cooperative High School and Cass Technical High School. In the following writing we will attempt to give a summary of the visitation.

During the visitation to each of these schools, we had the opportunity to ask questions and discuss the facilities of each of the schools with administrators, instructors, and students.

It was the opinion of each of us who attended that this trip was extremely worth-while. We found a very fine parallel in the programs in the Detroit schools to those that we can envision being conducted in the Muskegon area.

SKILLS CENTER

The Skills Center is a relatively new institution, opened in August of 1964 and housed in a building complex which was given to the Detroit Public Schools by the General Services Administration after the building was vacated by the U. S. Army Ordinance Depot. The main facility is a four-story industrial type structure. It is well lighted, well maintained, has adequate outlets for 110 and 220 electrical service, has sufficient restroom facilities, and is very suitable for the type of training which has been undertaken by this institution. It houses the special skill training program which will be conducted under Federal funds granted to the schools through the Manpower Development and Training Act in cooperation with the Michigan Employment Security Commission.

These programs are for both youth and adults who are not in school, unemployed, and in need of upgrading and retraining to make them employable. The main objective of this institution is to train each individual with a salable skill and to prepare them as rapidly as possible for employment. The training programs provide skills for those of higher intelligence and ability in automotive mechanics, machine tool, cooks and bakers, etc. They also provide basic skill training for persons that are less fortunate--illiterate, (sixth grade reading level and below). These programs involve training for maintenance

work, landscaping work, waitress work, etc. There are many other skills being taught in this institution such as automotive, body and fender repair, upholstery, clothing repair and several of the office skills.

The most interesting phase of this instruction is the emphasis placed on basic education where they are working with illiterate adults. These people are taught to read at the same time they are being trained in basic skills. This is done by teaching future janitors how to read the labels on the cans of floor wax and how to read such words as door, floor, mop, broom, pail, etc. Mr. Fisher was fortunate to have visited the Skills Center two months ago and a definite note was made in the progress of the students and their attitude was definitely improved since the first visit.

Funds from new legislation under the Economic Opportunity Act will also be funneled into this project and their goal is to train up to 2,000 youth and adults in this facility at a time. They presently are training 1,700 on two shifts.

Instructors were recruited from all walks of life. Very few of these instructors are certified degree people. Much of the reading and skill training materials has been developed at the facilities as they are needed. Even new teaching machines have been designed and made there.

This facility gave us a very good picture of the type of training that is needed for a large group of economically distressed persons, as well as for those who have been less fortunate in obtaining a sound educational background. It might be noted here that in February of 1965, there were 960 persons reported within the last 30 days at the Muskegon Michigan Employment Security Commission office who were unemployed and had an eighth grade education or less. Some of the instruction and training that will be conducted at the NuWay Building under the Manpower Development and Training Act funds (school Dropout Project) will be similar to the type of training being conducted in the Detroit Skills Center.

WILBUR WRIGHT COOPERATIVE HIGH SCHOOL

Wilbur Wright Cooperative High School is more than a school--it's an idea--and it's a growing idea. The school was named for Wilbur Wright, co-inventor of the airplane, and was authorized by the Board of Education on May 27, 1928. Instruction began in the Dickinson School with machine shop classes at Cass and Wayne University and automotive classes in the Motor Transport Building. After the Dickinson fire in November, 1928, classes were held in the Charles George School until the new Wilbur Wright, a two-story building extending from Calumet to Canfield on Twelfth Street, was completed in January, 1930.

To satisfy the demand for this type of training, construction of the third floor began in the fall of 1941 and was completed in time for use during the following semester. In the fall of 1953, construction of the wing on Calumet was completed on another three-story addition to the west end of the building.

In September, 1957, Superintendent Samuel Brownell changed the school from an all boys school to a co-educational senior high school. The new policy was in line with the national trend to accelerate and extend cooperative opportunities to girls.

The original purpose was "to share training responsibilities with our industries--hence, the name "cooperative high school". It is one of the pioneers in cooperative training for high school pupils. The program at Wilbur Wright provides an opportunity to gain the technical knowledge and skills related to a given occupation or trade directly from business and industry.

Getting a high school education on the co-op plan is under the supervision of school coordinators who check the scholastic work in school and make regular inspection visits to business and industry where the pupils are employed. It is a truly cooperative educational program because both employers and the school assume responsibility for the pupil's success or failure. Graduation depends on satisfactory achievement in school and on the job.

In order that the cooperative training program will function properly and produce the desired results, the students' programs are organized on the alternating plan; that is, the students spend half their time in their chosen shop classes and the other half in academic classes.

This procedure is accomplished by having the student body divided into two groups, identified as the A group and the B group. While members of the A group are in their shop classes, the B group are in their related or academic courses. At the end of each two-week period the two groups exchange places.

When a pupil becomes employed as a co-op student, the job takes the place of the school shop class. Usually two pupils are assigned to work on a given job. In this way a position is filled full time; and at the same time, the pupil fulfills the high school requirements for graduation. Pupils may become eligible for co-op jobs during the eleventh and twelfth grades. These work assignments are possible provided the student passed all his courses, his attendance is acceptable, and he is approved by his teachers and counselors.

We spent a full afternoon touring the facilities at Wilbur Wright and enjoyed the hospitality of several of the instructors in the school. We found these instructors to be dedicated vocational educators who were very much concerned with the needs of youth for training in specific skills. They were very alert to the needs of industry and were very much in tune with the type of training

that industry felt acceptable in preparing youth for employment. Skill training during the three-year programs is being conducted in Food Services, Drafting and Mechanical Design, Electrical-Electronics, Hospital Services, Tool and Die and Automotive Maintenance which is strictly of a trade nature and has a bearing on automotive service work. It prepares the student for employment in such jobs as automotive electrical specialist, automotive carburetion specialist, wheel alignment specialist, transmission, specialist, etc.

The Business Curriculum prepares boys and girls for competency in most initial business jobs and cooperative employment while in school, and for satisfying employment or possibly higher education upon graduation. After the 10th grade, students are requested to choose one of the three curriculums--Bookkeeping-Clerical, Retailing or Stenographic.

The Food Service Curriculum covers such areas as basic food preparation, quantity cooking and baking, nutrition, cafeteria service, and waitress services.

The Drafting and Mechanical Design Curriculum requires the 10th grade drafting students to become familiar with major shop tools. These students spend half of their time in the Machine Shop and the other half in the Trade Drafting Shop. It is possible for the eleventh and twelfth grade students in this curriculum to be employed in area industries. We were very impressed with the quality of the work done by students in this program.

The Electrical-Electronic Curriculum is designed to provide pupils with one year of basic fundamental training in each of the two fields and an opportunity for advanced experiences in the shops and on the job.

The Hospital Service Curriculum deals mainly with the girls. Shop work here includes Nursing Arts, Theory and Practice; Food Preparation and Service; Nutrition; and Child Care. Cooperative placement is available in several of the area hospitals. The instruction is under the direction of a registered nurse and a home economist.

The Tool and Die Preparatory Curriculum provides training for a foundation in skills which lead to apprenticeship in the following.

1. Machinist
2. Toolmaker
3. Die Maker
4. Gage Maker
5. Metal Pattern Maker
6. Machine Repair
7. School Teacher (Trade & Tech.)
8. Industrial Technician
9. Electrical Technician
10. Engineering Technician
11. Science Technician
12. Tool Design

In checking with the Assistant Principal, it was found that approximately 16 per cent of the graduates of Wilbur Wright go on to more formal education on the college level. It should be noted that the instructors have felt the pressure of the academic "push" and are having trouble finding students qualified to fill the qualifications necessary at Wilbur Wright. Local industry places a constant demand for competent students to fill employment needs in the Detroit area. The school placement officials have not been able to meet this demand throughout the years.

It is interesting to note that next year the concept at Wilbur Wright Trade School will be changed and it will become a part of the new high school which is being built a few blocks away. The two-week cooperative plan will be dropped and students will be attending Wilbur Wright only three hours per day on the "block time" or day trade basis.

CASS TECHNICAL HIGH SCHOOL

The Cass Technical High School is a public high school which prepares youth for employment on the technical level, or for ready admission to further education and training at the college or university level. It offers a solid curriculum of math and laboratory science as a background for a career. It is a vocational school because the specialty courses develop skills needed in that career. The original intention, as we observed, was to prepare youth for technical employment upon graduation. However, it should be noted that because this institution was able to be highly selective in allowing students to attend this school, 75 to 80 per cent of their students now go on to further education in universities or colleges. It would seem that these students are "the cream of the crop" from all of the Detroit Public Schools. This eight story brick school building in downtown Detroit is very impressive. It was built in 1917 and it still is very usable today. Laboratories and shops have been kept up to date. However, the science laboratories seem to have had the greatest amount of attention in updating throughout the past few years because of the availability of Federal funds under the National Defense Education Act. Specific vocational offerings are as follows:

Air Conditioning and Refrigeration. No students to speak of at the high school level in this course. This work seems to be a little below the dignity of the students attending the institution.

Graduates of the Astronautics Curriculum are preparing to enter engineering colleges or take employment as aeronautical technicians. The majority of the present students are instructed in the science of "space flight".

Automotive Technology is a study of principles of electricity, thermodynamics, machanics and hydraulics. The shop area has become an engineering testing lab. The instructor here was very proud of the fact that some of his students had gone on to become doctors and lawyers.

Arts Curriculum - Courses are taught in Commercial Art, Arts & Crafts, and Costume Design.

Drafting-Building-Science-Engineering Technology. Highly specialized technical courses teaching mostly pre-engineering design. Again as in most of the courses, industry was showing a heavy request for students to be employed upon graduation but the instructors were proud to announce they had no graduates as most students were going on to college.

Electrical Electronics. Although this course is geared for the college preparatory student, the instructor seemed to have a great deal of realization of the needs of industry in the appliance service and repair field.

Graphic-Arts Curriculum. This program is being updated and tends to be more vocational in nature. It is rapidly converting over to a offset shop.

Home Economics. This program does not look too much different from the home economics program found in most comprehensive high schools. Perhaps a little more emphasis is placed on the clothing-textile design area.

An area undergoing change is the Business Education Currciulum. A new expressway has caused the demolotion of the old School of Commerce which was across the street. The administrators of the Business Education Department have expanded the curriculum offerings in distributive education programs and are now experimenting in the field of electronic data processing and business administration programs at the high school level. The large area devoted to business education is extremely well equipped and the data processing area includes everything necessary to teach data processing and programming technology, including a 1620 IBM computer. The computer is being used almost 100 per cent for instruction. However, they have been doing some of the scheduling of students programs and student accounting for the Cass administration only. The instructors question very strongly the use of a computer for instruction and administrative work combined.

SUMMARIZATION

It is most interesting to note the 75 per cent college entrance group at Cass, 15 per cent average at Wilbur Wright and compare this with a 30 per cent average of graduates in Muskegon County. Comparing the institution we visited with the needs of Muskegon County, we can envision all these types of programs being offered in Muskegon County on a smaller scale in the near future.

An area vocational school could handle programs similar to those conducted at the Skills Center and Wilbur Wright, while the types of programs being offered at Cass should be offered at the Community College.

It would seem that Muskegon County schools have enough students and local industry has ample needs to warrant our presenting a broad program such as this in vocational training.

KENT COUNTY, MICHIGAN

An area study was made to determine whether vocational education was needed in Kent County, at what level in education it was needed, and how it should be financed. The Kent County population in 1960 was 363,187, and the 1970 projected population is 439,950. The total public and non-public school population in 1965 was 112,371. Surveys by questionnaires included: (1) agriculture (68 farms and 60 agricultural businesses), (2) business and industry (1,500 sent and 424 returned), (3) parents of seventh graders (8,482 sent and 5,547 returned), (4) vocational education staffs and facilities (31 public and parochial high schools serving 27,247 students), (5) 1961 high school graduates (2,371 sent and 1,067 returned), and (6) 1965 high school seniors (6,088 sent and 3,973 returned). Recommendations were: (1) Training opportunities in vocational education should definitely be increased in the Kent County area, (2) Area vocational-technical centers should be constructed in Kent County to provide curriculum for 11th, 12th, 13th, and 14th grade levels, (3) Committees from business, industry, labor, etc., should be established to serve as advisory committees to determine the curriculum content for the area centers, and (4) An area tax millage should be submitted to the electorate of the school district for financing construction, equipment, and operational costs for the area vocational centers. The appendix includes sample survey questionnaires. (PS)

INTRODUCTION

In a broad sense, all education contributes to vocational competency, but vocational education refers to that part of a student's instruction intended specifically to fit the student for work. Although it is clear that the physician, the architect, and the lawyer, for example, receive occupational preparation in their respective specialized curriculums, the term "vocational education" does not usually refer to instruction leading directly to a baccalaureate or professional degree.

This report uses the term "vocational education" to refer to all formal instruction for both youth and adults, at the high school and post-high school levels, which prepares individuals for initial entrance into and/or advancement within an occupation or group of related occupations. From time to time reference will be made in the report to "technical education," which is considered to be a part of the natural continuence of vocational education. References to technical education are used to focus attention upon a phase of vocational education having certain inique characteristics, usually requiring more rigorous science and mathematics background and more exacting skills.

Liberal education and vocational education are both essential aspects to prepare the individual for living and for earning a living; they cannot be thought of as hostile or mutually exclusive enterprises. An educational program which recognizes value in both liberal education and vocational education is most desirable for the attainment of future individual and societal goals.

Nationally, an average of 55,000 young people are entering the labor market each week. This figure will continue to grow, as will the number that appears on the labor market as a result of of automation, or job retraining and up-grading. Business and industry are demanding more skilled and semi-skilled workers and education must modify curriculums to meet these needs.

The Vocational Education Act of 1963 was passed after legislators became convinced education needs to do more to supply students that possess proper skills to maintain our economy in a changing society. The purpose of this act is to assist schools in providing buildings, equipment and instructors to train and prepare students for the world of work, and to retrain and upgrade present workers.

In November of 1964 the Kent County Superintendents Association appointed a five member area vocational technical education study committee. The purpose of this committee was to study the needs for vocational education in the county and make recommendations according to these needs, to the County Superintendents' Association.

The committee proposed that an area study be made that would answer three questions.

1. Is vocational education needed in Kent County?
2. At what level in education is it needed?
3. How should it be financed?

Two thousand dollars were contributed by the secondary schools of Grand Rapids, Grand Rapids Junior College and the Kent Intermediate School District. This six thousand dollars was matched by funds from the State Office of Vocational Education, Department of Education.

The study was started in January of 1965.

Survey instruments were sent to business and industry to determine their needs and to learn how our schools could assist in supplying those needs. Seniors of 1965 and graduates of 1961 were surveyed. Parents of seventh graders were surveyed to learn what they expected of schools for their youngsters who would soon be in high school. School staffs and facilities were surveyed to see what vocational programs were now being offered.

A survey conducted by the office of the County Extension Director attempting to determine the needs for workers with agricultural skills was analyzed, and a small survey of Kent County farmers was conducted.

With this information and the help and assistance of many, conclusions have been reached and recommendations made that will indicate the direction our schools should take in vocational education.

OBJECTIVES OF THE VOCATIONAL–TECHNICAL SURVEY

The administrators of the schools of Kent County fully realize the importance of vocational education in the curriculums of the school systems they represent. Realization was also present as to the tremendous costs involved in establishing adequate vocational programs.

The Vocational Education Act of 1963 promised aid to schools in vocational programming.

Many questions were prevalent in the minds of the county's educators.

1. What are the schools doing now in vocational education - (both secondary and post secondary)?
2. What is needed in our schools' curriculums to better serve business and industry and the students?
3. How can the schools cooperate in providing needed costly vocational education programs?
4. How can the high schools and post-high school programs correlate to provide a full complete vocational program?
5. How can funds from the Federal Vocational Act of 1963 be used most wisely?

This area vocational-technical education survey was established to provide the data upon which answers to the above questions could be based.

CHAPTER I

PRELIMINARY DATA

Population Trends In Kent County. The distribution of population in Kent County has undergone and is undergoing important changes. At the turn of the century, the population of the city of Grand Rapids was more than twice that of the rest of Kent County. The 1960 census showed Grand Rapids as having just over fifty-five percent of the population of the entire County; it is expected that by 1970 the non-Grand Rapids population of the county will exceed the population of the core city. See Table 1.1.

TABLE 1.1

POPULATION IN KENT COUNTY

Year	City of Grand Rapids	County not including Grand Rapids	Total
1900	87,565	42,149	129,714
1910	112,571	46,574	159,145
1920	137,634	45,407	183,041
1930	168,592	71,919	240,511
1940	164,292	82,046	246,338
1950	176,515	111,777	288,292
1960	201,487	161,700	363,187
1970 Projected	213,650	226,300	439,950

U.S. census figures show Kent County experienced a net increase in migration during the decade 1950-1960 of youth of high school and post-high school ages. The group who were five to nine years old in 1950 and fifteen to nineteen years old in 1960 had increased by 10.7 percent; that group who were ten to fourteen in 1950 and were twenty to twenty-four in 1960 had increased by 15.9 percent; the group from fifteen to nineteen in 1950 had enlarged 11.8 percent by 1960. Kent County's total population grew by nearly 75,000 in the decade of the 1950's; net migration accounted for about 14,000 of the 75,000.

Membership And Valuation Of Kent County School Districts. Of particular interest when consideration is being given to the establishment of new and/or improved educational facilities in an area are the membership and valuation figures. Following are the membership and valuation statistics for the school districts of Kent County. Membership reports are given for 1964 and 1965; valuation figures are for 1965. Total Kent County membership in 1965 is 112,371; for grades nine through twelve the Total membership for 1965 is 28,135. State equalized valuation in Kent County, 1965-1966 is $1,213,743,716.

Drop-Out Survey. In Kent County, during the 1964-65 school year a total of 27,246 pupils were enrolled in grades nine through twelve.

A survey of all the secondary schools was made to determine how many drop-outs there were in the 1964 school year, and to determine the reasons for dropping out.

The national average indicates that approximately one-third of those in grade school will drop out before high school graduation.

During the one year, 1964-65, the drop-out rate in Kent County secondary schools was 4.7 percent. Of all the pupils enrolled in grades nine through twelve in the school year 1965, 1,243 dropped out. If this drop-out rate is constant through four years of high school, the total drop-out rate for one class for the four years would be approximately eighteen percent. That is, since there are 28,135 pupils in high school now in grades nine through twelve, and since we anticipate that approximately 1240 will drop out each year for four years, total drop-outs for four years will be nearly 5000, which total approximates eighteen percent of one complete high school age group. It is expected that in May and June of 1966 about 6000 pupils will graduate from high school in Kent County. Thus, in four years time we tend to lose from our potential high school graduates a number about eighty percent as large as a given year's graduating class. If curriculums could be established which would encourage such a large group of drop-outs to remain in school until high school graduation, surely both society and the individuals so encouraged would benefit.

Statistics gleaned from the drop-out survey can be found in Table 1.9.

TABLE 1.9

CHAPTER II
AGRICULTURAL SURVEYS

Agricultural Occupations Survey

Introduction. During July, August and September, 1964, under the direction of Mr. Richard W. Reath, County Extension Director, and with the cooperation of area agriculture teachers, a survey was conducted in an attempt, prinarily, to learn the needs of employers in Kent County for young people with agricultural training and/or experience. A copy of the survey questionnaire used can be found in the appendix. Some of the questionnaires were mailed to prospective respondents, but most were completed when agricultural teachers called personally on the employers queried. An employer was contacted only if those conducting the survey thought agricultural training and/or experience might be desired for his employees.

Number Of Employers Participating. Questionnaires were completed by sixty (60) establishments, representing twenty-seven (27) different types of establishments. Table 2.1 presents the types of establishments responding to the survey and the number of each type responding.

TABLE 2.1

Types and Numbers of Businesses Responding to Agricultural Occupations Survey

Types of Businesses	Number

Service Station (gas, oil, etc.)	1
Schools (secondary)	1
U.S. Post Office	1
Veterinarian	3

Numbers Employed By Respondents. The employers responding to the Agricultural Occupations Survey employed a total of 2292 employees. However, three employers accounted for seventy-four (74) percent of the total with 2000, 200 and 100 employees respectively. A majority (34) of the respondents employed fewer than ten employees.

Desirability Of Agricultural Skills And Knowledge. Twelve (12) employers answered that agricultural skills were required of their employees. These twelve employers employed a total of forty-five (45) employees of whom agricultural skills were required. Nine (9) employers required their employees to possess agricultural knowledge. Thirty-six (36) employees of these nine employers were expected to be so equipped. Fifteen (15) employers answered that if employees possessed agricultural knowledge, such was helpful, but not required. These fifteen employers hired 128 employees whose possession of agricultural knowledge was helpful, but not required. One employer in the wholesale produce business accounted for ninety (90) of these 128 employees. Thus, 209, or less than ten (10) percent of the employees whose employers were surveyed held jobs the performance of which was dependent upon the possession of agricultural skills and/or knowledge.

Although the questions regarding the number of employees needing agricultural skills and/or knowledge, or for whom such knowledge would be helpful, was worded in such a way as to clicit a numerical response, some employers evidently misunderstood. In addition to the thirty-six (36) employers mentioned above who wanted employees to possess such skills or knowledge, another eleven (11) indicated by checks (✓) or "yes" that they too, desired employees to be so equipped. Therefore, a total of forty-seven (47) or seventy-eight (78) percent of the employers surveyed answered that agricultural skills and/or knowledge were either required or some of their employees or were helpful to their employees.

Education Required Of Employees. Only forty-six (46) of the employers questioned responded to the question asking what education was required of their employees, of these forty-six, the majority (25) answered that a high school education was a requirement for employment; eight (8) responded that a "Short Course" in agriculture beyond high school was necessary or helpful; six (6) said technical training was required; and seven (7) said a degree was mandatory Presumably, for at least some of the jobs for which these employers need employees, education through high school is not required.

Employee Age Requirement. As one would expect, the median minimum age required for employment was eighteen (18). Minimum ages required for employment ranged from twelve (12) to twenty-five (25). Twenty-six (26) employers, however, answered that eighteen was the minimum age required of the employees. The next largest number of employers (8) responded that twenty-one (21) was the minimum age required of employees.

Employer Opinion Of The Number Of Available Employees. Most (27) of the employers who responded to the question asking for their opinion of the number of available employees indicated that the supply is adequate. Sixteen (16) said the supply is inadequate, and a few (4) answered that there is a surplus of available employees. Those employers in whose opinion an inadequate labor supply exists operate the types of businessess listed in Table 2.2. Of those employers who responded that an inadequate labor supply exists, only seven (7) themselves need additional employees; nine (9) of the employers who believe an inadequate labor supply is available in their respective types of business need no additional employees themselves. Furthermore, those employers who think an inadequate labor supply exists, and who themselves need additional employees required, at the time of the survey, only eleven (11) employees to fill the available positions. See Table 2.2.

TABLE 2.2
Types of Businesses in Which an Inadequate Labor Supply Is Thought to Exist Salary Range, and Numbers of Employees Needed

Type of Business	Salary Range Yearly Figures Unless Otherwise Indicated	Number of Employees Needed
Banking	$3,000 up	1
Dairy (retail)	----	-----
Grain Elevator & Farm Supply	$4,200 - 5,500	1
Farm and Auto Service	----	-----
Florist (retail)	$2,500 up	1
Grocery	$1.27 - 2.23 hr.	-----
Hardware	$1.00 hr. up	1
Hotel	$1.25 - 2.50 hr.	1
Insurance	$5,000 - 7,500	-----
Meat Processing	$2.00 - 3.00 hr. $5,000 - 14,000	2
Newspaper	$25 weekly, up	-----
Nursery	$1.25 - 2.00 hr.	2
Veterinarian	$7,500 up	1
Wholesale Meat, Slaughterhouse	$2.00 - 3.00 hr.	-----

Number Of Agricultural Jobs Available. Relatively few jobs for which agricultural skills and/or knowledge are required or helpful were available at the time the survey was conducted. Employers answered that a total of ninety-four (94) jobs were available. However, one employer, the vegetable grower and packager who hires employees as young as twelve (12), accounted for seventy (70) of the ninety-four (94), and he also replied that the labor supply was adequate. Only twenty-four (24) jobs with other responding employers were available.

Wages Paid. Wages and salaries paid by responding employers ranged from a low of twenty-five ($.25) cents per hour for farm laborers to $25,000 per year for a licensed veterinarian.

Employer Interest In Co-Op Program. Forty-eight (48) employers responded to the question asking about their interest in a program in which a high school senior would be employed by them, receiving on-the-job training. Forty (40) of those responding indicated interest in such a program; eight (8) were not interested. The largest employer (1400 employees) was not interested. The second largest employer (200 employees) responded, "We are interested, but because of labor contracts this would almost be impossible." The third largest employer (100 employees) indicated interest, but may have misunderstood the question. He answered, "Summer type work has some possibilities -- however, college applicants usually sufficient."

Survey of Farm Labor Needs

Introduction. Late in the second semester of the 1964-65 school year it was decided that an attempt should be made to survey farm labor needs in Kent County and, simultaneously, to ask of families living on farms certain questions the answers to which could be of value to the completion of the study herein being reported. Consequently, a questionnaire having been prepared, copies of it were taken to teachers of agriculture in the high schools of Kent County having agricultural courses. These teachers, it was presumed, knew the area in which they taught so well that they could direct students of theirs to deliver copies of the questionnaire to most of the significant farms in their respective areas. Completed questionnaires were returned to the office of the Director. At the outset, the reader must be cautioned that no attempt was made either to sample farms in a statistically random fashion or in a statistically stratified fashion. Furthermore, relatively few questionnaires were completed and returned. If one is to attempt to interpret the data here presented, then, he must do so with caution.

A copy of the questionnaire used can be found in the appendix.

Number and Size Of Farms Represented In The Survey. Our survey tends to over-represent the large farms and under-represent the small farms. Table 2.3 presents data on farm size.

TABLE 2.3
Farms by Size
Respondents and All Kent County

Under 25	9
26-35	4
36-45	17
46-55	22
56-65	9
Over 65	1

Formal Agricultural Education Of Farm Operators. Thirty-four (34), or exactly one-half, of the respondents operating farms have had high school courses in agriculture. Thirteen (13)of these have taken four (4) years of high school agriculture; eight (8) have fewer than four (4) years of high school agriculture courses; the other (13) responded without explaining the exact number of years of agriculture courses they had taken.

Only eight (8) of the respondents have taken college courses in agriculture. Four (4) of these took one year each of college agriculture; three (3) were enrolled in college agriculture courses for two (2) years each; one (1) spent three (3) years in college agricultural classes.

Sixteen (16) respondents (approximately 24 percent) have taken adult education classes in agriculture.

Adult Education Desired By Farm Operators. Twelve (12) of the respondents (nearly 18 percent) answered that adult education courses in equipment maintenance, operation and repair would be of benefit to them. Eleven (11) of those responding (about 17 percent) asked for adult courses in farm management and/or record-keeping. Nine (9), or approximately thirteen (13) percent requested adult courses in animal husbandry, including livestock selection and management, breeding, and disease recognition and control. A few respondents requested adult courses in use of fertilizers, chemicals and pesticides; in soil analysis and in orcharding.

Kinds Of Farming And Typical Farm Size. Farms were classified, for the purposes of this survey, both by the kinds of crops grown and by the types of livestock raised. No attempt was made to classify the farms into just one classification; rather, a farm might be classified under one, two, or more headings depending on the crops grown and the livestock raised.

Table 2.6 presents the size of each farm by kinds of farming done by acreage and/or head. Table 2.5 shows the number of farms by kind.

TABLE 2.5

Number Of Workers Employed And Needed. The farms surveyed employ, including owners, 210 full-time workers. In addition, then, to the owner-operators, 142 full-time workers find employment on these farms. Of these, sixty-eight (68) were family members. Nearly sixty-five (65) percent of the full-time workers on these farms are family members, therefore. Seventy-four (74), or about thirty-five (35) percent are non-family members. Only nine (9) of the farms surveyed employ more than five (5) full-time workers. Eighty-five (85) percent of the farms surveyed employ five or fewer full-time workers; almost fifty-nine (59) percent (40 farms) employ two or fewer full-time employees.

Thirty-one, or approximately half, of the responses indicated a need for additional seasonal help. It was difficult to estimate the number of seasonal employees needed by the respondents, however, because the question, in retrospect, was not worded in such a way as clearly to call for a numerical response. Our best estimate is that approximately 100 seasonal employees would be needed.

Well over half (39) of the farms surveyed need no additional employees, even if dependable employees were available. Almost thirty-seven percent (25 farms) would hire additional available, dependable employees. Nine (9) respondents would hire these additional employees full-time; sixteen (16) would hire additional part-time dependable workers. Most of these possible additional employees would be assigned general farming tasks, rather than any specific, specialized duties.

Fifty (50) of the returned questionnaires contained a response to question 5: "If present help left, would you fill the vacancy?" Of those responding to the question, nearly one-third (32 percent) answered, "No." Sixty-eight (68) percent responded, "Yes."

Education Additional Help Should Have. Four (4) of the respondents expected that additional employees they might hire have taken college courses in agriculture, but nearly all (21) who indicated a need for additional dependable employees thought these employees ought to have had high school courses in agriculture. It is somewhat difficult, however, to estimate the number of years of high school agricultural education these respondents would expect of their additional employees. One (1) respondent thought one year of agricultural education would be sufficient; ten (10) answered that four years would be expected. Nine (9) respondents simply checked (√) high school without writing the number of years expected.

Estimated Five-Year Annual Need For Employees. Thirty-four (34) respondents estimated their five-year annual need for part-time employees. The number of part-time employees needed per farm ranged from one (1) to thirty (30). The total annual need for part-time employees was 149. Most employers (23) would expect these employees to do general farming work; five (5) would require employees for orcharding; four (4) respondents anticipate a need for part-time employees to harvest grain crops; two (2) employers estimate they will require dairy workers.

Twelve respondents estimated their five-year annual needs for full-time employees. The one 1200 acre farm estimated it will need twenty (20) employees annually; no other respondent will need more than two (2) full-time employees annually the next five years. The total, annual, estimated number of employees needed was thirty-six (36). Five (5) employers answered that these full-time employees would be engaged in general farm work; four (4) needed these employees for work on dairies; two (2) need employees for orcharding; and one (1) employer expressed the need for an employee who would work with fowl.

Table 2.7 presents the expressed need of the respondents for employees over the next five years.

TABLE 2.7

Estimated Five-Year Annual Need For Employees

3	8		
1	6		
7	2		
18	1		

Knowledge And Skills Of Benefit To Employees. Forty-one (41) of the respondents answered the question, "What subject knowledge or skills would be of benefit to your employees?" Of these, nineteen (19) mentioned equipment operation and/or maintenance. Eight (8) employers think knowledge of livestock care and breeding would be of benefit to their employees; seven (7) ask that employees have general farm experience; three (3) responded that knowledge of orcharding would be beneficial, and another three (3) thought a knowledge of record-keeping and farm management would be helpful. One (1) employer thought his employees would be benefited if they had some knowledge of soil analysis.

Opinion As To Content Of High School Agricultural Curriculum. Farm operators were asked what they thought should be taught in high school agricultural courses. Thirty-nine (39) respondents (approximately 57 percent) replied to this question. Of the respondents most (19, or nearly 28 percent) mentioned record-keeping and farm management as being desirable for inclusion in the agricultural curriculum. The next largest group of respondents (17) mentioned farm equipment operation and maintenance. Eleven respondents wanted high school agriculture students to study care of livestock and eight (8) farm operators thought soil analysis should be included in the high school agricultural curriculum. Other suggestions included orcharding, pest control, use of fertilizers and chemicals, general farm experience, harvesting, and building and fence maintenance, but none of these latter suggestions was mentioned more than six (6) times.

Suggested Training For Future Farm Jobs. Approximately one-half (36) of the respondents replied to the question asking their opinion of the training young men should have for future farm jobs. Of these, nearly fifty (50) percent (16) mentioned general farm experience. Eleven mentioned farm equipment maintenance and operation. Eight (8) wanted young men to have record-keeping and farm management training, and seven (7) wanted future farm workers to have had training in working with livestock.

Farm Operators' Occupational Aspirations For Their Sons. Forty-one (41) of the respondents (60 percent) replied to the question asking if they encouraged their son(s) to make farming their vocation. Of those responding to the question, fifty-eight (58) percent (24 respondents) replied "yes". The others (17 respondents or approximately 42 percent) do not encourage their sons to make farming their vocation.

Thirty-three (33) respondents replied to the query asking if they encouraged their son(s) to choose some vocation other than farming. Almost sixty-four (64) percent (21 respondents) replied, "Yes". Twelve (12) respondents (approximately 36 percent) replied, "No".

CONCLUSIONS OF THE AGRICULTURAL OCCUPATIONS & FARM LABOR SURVEY

Both the Agriculture Occupations Survey and Farm Labor Needs Survey were inconclusive in their results. The survey of farm labor needs was received from only 68 farmers. The 1960 census indicates we had 2,893 farms in Kent County. The Agricultural Occupations Survey was used by the County Extension Program for the use of school counsellors in Kent County -- only 60 participated in the survey.

The committee is aware of the need for trained people in both the agricultural production field and the fields relating directly with agriculture.

The present six high schools offering vocational agriculture should continue with their present programs which are mainly geared for the training of agriculturalists in the production field.

The Area Center would specialize in offerings based in part on the survey and in part with the advice of agricultural advisory groups.

B - Farm machinery repair, maintenance, and operation

C - Record keeping and farm management

CHAPTER III
A STUDY OF HIGH SCHOOL SENIORS

Introduction. During the early months of 1965 the Executive Committee of the Kent County Vocational-Technical Education Survey examined a survey instrument (High School Information Sheet) for use with high school seniors which had been originally developed by Dr. Raymond Young of the University of Michigan's Center for the Study of Higher Education and which had been used, modified slightly, by the Institutional Evaluation Coordinating Committee of Grand Rapids Junior College in a survey conducted in 1964. Having made further slight modifications in the instrument, the Executive Committee instructed the director of this study to attempt to secure the cooperation of all secondary schools in Kent County to administer the Information Sheet to their respective senior classes.

Two high schools (Grand Rapids Catholic Central and Grand Rapids West Catholic) were unable to participate in this survey because their respective closing dates for senior pupils considerably preceeded the closing dates of the public high schools. The survey director, inappropriately assuming more uniform closing date, failed to contact these two parochial high schools early enough to ensure their participation. Furthermore, for a reason completely unknown to the director, data was either not received or not processed from Creston High School, one of the Grand Rapids City high schools.

The above difficulties conceded, and with the aid of Mr. G. Adler, returns were received from almost all Kent County public, private, and parochial secondary schools. At the time the questionnaires were distributed, it is estimated there were 6088 ("Fourth Friday" enrollment) students in the senior classes in Kent County high schools. Returns were received from 3973 seniors; thus, the returned, usable, processed returns represent approximately 65.24 percent of the total 1965 Kent County senior class. A copy of the questionnaire may be found in the appendix.

Sex and Geographic Distribution of Seniors. Please examine Table 3.1. Notice that 678 of the male respondents were from the City of Grand Rapids and that 828 of the female respondents were from Grand Rapids. Of the non-Grand Rapids residents, 1264 were males and 1202 were females. (Remember that these figures present a distorted picture because three large city schools are not included. Actually, the number of Grand Rapids City and non-city senior pupils was almost exactly equal.

TABLE 3.1

Sex and Geographic Distribution of Seniors

Location of High School	Male	Female	Total
Grand Rapids Public	504	531	1035
Non-public	174	297	471
Total	678	828	1506
Non-Grand Rapids	1264	1202	2466
Grand Total	1942	2030	3972

Enrollment by High School Curriculum. The curriculum in which a high school student is enrolled is usually taken by educators to be indicative of the student's educational, and, often, occupational aspirations. An examination of the curriculums in which the respondents are enrolled reveals that just over 50 percent are enrolled in the college preparatory curriculum. Nearly 50 percent, then, are enrolled in non-college preparatory curriculums. The two non-college preparatory curriculums in which these seniors are enrolled are the commercial curriculum and the general curriculum. Table 3.2 presents this data.

TABLE 3.2

Senior Enrollment By Curriculums

Sex	No Response	Comm.	College Prep.	Ind. Arts	Agri.	Gen'l	Home Econ.	Other
Male	11	167	1063	176	30	478	1	16

Percent	.38	21.97	51.07	4.53	.76	19.98	.45	.86

Seniors' Perceptions of Their Rank in Their Classes. Almost one-third of the seniors responding to our survey think they rank in the top one-third of their respective classes, but fifty-five (55) percent think they rank in the middle third of their respective classes. Only 12 percent suppose they are in the lower third of their classes. Table 3.3 shows how these students ranked themselves.

TABLE 3.3

Perceived Rank in Class of Seniors

Sex	No Response	Top Third	Middle Third	Lower Third
Male	14	528	1070	328
Female	21	721	1118	170
Total	35	1249	2188	498
Percent	.88	31.46	55.11	12.54

Community Stability. The seniors who responded to our survey tend to come from homes which have not been "broken" by death, separation, or divorce. Eighty-four (84) percent of the respondents were living with both parents at the time of the survey. Furthermore, nearly 76 percent of these seniors had lived in Kent County over 10 years and another 10 percent had lived in Kent County from 6 to 10 years. These data tend to show that there is a high degree of community stability in Kent County. Future educational plans do not have to contend with high rates of in-mobility or out-mobility. Tables 3.4 and 3.5 present these data in greater detail.

TABLE 3.4

With Whom 1965 Seniors Are Living

Sex	No Response	Both Parents	Only Mother	Only Father	Other
Male	3	1640	192	37	69

Percent	.13	1.79	2.77	5.09	10.17	75.86	4.20

Anticipated College Attendance. Over 52 percent of the seniors in the 1965 class definitely expect to attend college, and another nearly 14 percent probably will attend. Eighteen (18) percent do not plan to attend college, and the plans of another 5 percent probably do not include college attendance; 10 percent don't know if they will attend or not. These percentages should be compared with the high school curriculums in which these seniors say they are currently enrolled (see above, p 18). Whereas about 50 percent of seniors say they are enrolled in the college preparatory curriculum, 64 percent see themselves as probably attending college. The data summarized in this paragraph are shown in Table 3.6.

TABLE 3.6

Seniors' Plans to Attend College

Seniors' College of Preference. Only those seniors who had answered that they definitely or probably would attend college were asked to respond to the question asking them to name the college of their choice. Thus, 1303 seniors did not respond to this item. Of those who did respond, nearly 40 percent said they expected to attend Grand Rapids Junior College. No other individual college was selected as the choice of as many as 8 percent of the respondents. Table 3.7 shows the colleges these seniors (who probably or definitely will attend college) hope to attend.

TABLE 3.7

Colleges Seniors Expect To Attend

College	Sex		Total	Percent
	Male	Female

Other Mich.	80	115	195	7.31

First-Year Post-High School Plans. The largest group said they would attend college, and another nearly nine percent will enroll in some post-high school educational institution with a special vocational purpose. Thirty-three percent expect to enter full-time employment. Table 3.8 presents these data more fully.

TABLE 3.8

Seniors' Plans for First Year After Graduation

Perceived Adequacy of High School Preparation As It Relates to Post-High School Plans. Twenty-seven (27) percent of the respondents think their respective high schools are doing an inadequate job of preparing them for what they hope to do after graduation. Another 47 percent insist that although their high schools are doing well in some ways, preparation is not adequate in other ways. Thus, nearly 75 percent of the respondents think their high schools somewhat or seriously deficient in terms of the post-high school plans of their pupils. These data are presented in Table 3.9.

TABLE 3.9

Perception of Adequacy of High School Preparation

Adequacy	Sex		Total	Percent
	Male	Female		
No Response	33	27	60	1.51
Just what's needed	382	553	935	23.56

Fair, all need improvement	454	359	813	20.49
Poor	175	102	277	6.98

Seniors' Reccomendations To Improve High Schools. Only 2169 seniors wrote in reccomendations for the improvement of their high schools; 1800 did not respond to this item. The recommendation most often suggested, however, was for the addition of technical-vocational curriculums or courses. Of the respondents, 693 or 31 percent recommended added occupationally-related high school offerings. The next largest group, 495 or nearly 23 percent out of the respondents suggested more liberal arts subjects be added to the schedule. Table 3.10 presents these data more fully.

TABLE 3.10

Seniors' Suggestions Re: High School Improvements

Other	181	153	334	8.42	14.39

Adequacy of High School Help to Seniors Planning Occupations or Future Education. Only 18 percent of the respondents believe that their respective high schools are adequately helping them to make their plans for future education and or occupations. Another 24 percent are of the opinion they have received considerable help, but suggest nevertheless, that more help could be used. Well over half (56 percent) of the respondents insist they are receiving little or no help or not very much help from their high schools in planning for their future. It should be noted that these data tend to substantiate the data noted above, p. 22,Table 3.10. There wa found that nearly 75 percent of the seniors think their high schools should help them more with their post-high school plans. Here we find that just over 80 percent want additional assistance planning their occupational and educational futures. These data are given in Table 3.11.

TABLE 3.11

Seniors' Perceptions of Adequacy of Help Received from High School Re: Occupational Goals and Future Educational Plans

All Help Needed	301	423	724	18.25
Considerable, but could use more	442	520	962	24.24
Not Much	653	653	1306	32.91
Little or None	521	414	935	25.56

Perceived Attitudes of Parents Toward Seniors' College Attendance. Certainly the attitudes toward his possible college attendance which a high school senior believes his parents hold play an important part in his own plans for future, formal education. Over-whelmingly, seniors understand their parents to be sympathetic to plans for college attendance, or insistent upon attendance. Those seniors who did not respond to the question about such parental attitudes, plus those who (1) perceive their parents as not caring if they attend college or not, (2) say their parents don't want them to attend, and (3) respond that their parents won't permit them to attend college constitute just 16.21 percent of the total respondents. Over 82.5 percent of the seniors responding to the survey believe their parents insist upon their children attending college, or want their children to attend if the child himself wants to do so. Such strong parental attitudes will undoubtedly lend support to those 64 percent of the seniors (see Table 3.6, above, p.20)who anticipate attending college. Table 3.12 presents these data in greater detail.

TABLE 3.12

Parental Attitudes Toward Seniors' College Attendance

Attitude	Male Senior		Female Senior		Total	Percent
	Mother's Attitude	Father's Attitude	Mother's Attitude	Father's Attitude		
No Response	42	125	41	104	312	3.93
Insists or Expects Attendance	629	641	406	417	2093	26.36
Wants Attendance if Child Does	1116	981	1288	1177	4562	56.21
Doesn't Care	139	175	244	288	846	10.65
Doesn't Want Attendance	13	16	49	42	120	1.51
Won't Permit Attendance	0	1	2	2	5	.12

Parents' Formal Schooling. These parents who, if their children have assessed their attitudes correctly, so strongly approve of college for their children -- what formal education have these parents themselves had? Both mothers and fathers of the large majority of the respondents have not gone beyond high school; 73 percent of these seniors said their mothers have had no formal schooling beyond high school, whereas 65 percent of these pupils said their fathers had not gone byond high school. Fathers of these seniors are said to have achieved post-high school education in greater proportions (nearly 30 percent) than their mothers (about 24 percent). As has been made clear in so many studies, in this study too we find parents, generally, anticipating higher educational achievements on the part of their children than the parents themselves attained. These data are to be found presented in Table 3.13.

TABLE 3.13

Parents' Formal Educational Attainments

Attainment	Mother		Father	
	Number	Percent	Number	Percent
No Response	32	.81	74	1.86

Highest Grades Attained by Seniors' Siblings. The eldest sisters of the respondents have attained high school education or less in greater proportions than the eldest brothers of the respondents. Nearly 18 percent of the oldest brothers of the respondents have a high school education or less; over 19 percent of the oldest sisters of the respondents have a high school education or less. Nearly 18 percent of the oldest sisters of the respondents have had post-high school education; more than twenty-one percent of the oldest brothers of the respondents have had post-high school education. These data are presented in greater detail in Table 3.14.

TABLE 3.14

College Attendance of Seniors' Other Relatives. More than 50 percent (51.37 percent) of the respondents answered that other relatives have completed college. Fifty-three of these seniors have grandparents who have completed college; 1837 have aunts, uncles, and/or cousins who have completed college.

Vocational Goals of High School Seniors. Nearly 25 percent of the senior males and nearly 24 percent of the female seniors aspire to professional occupations. The occupational goals of many more seniors, if realized, would require post-high school formal education of less than four years (minimum) duration. For example, 116 respondents aspire to positions as laboratory technicians; 136 girls want to become practical nurses; 121 seniors look forward to jobs in the building industry; 163 aspire to positions at the management or executive level; and 80 girls want to become beauticians. For each of these jobs mentioned, and for others listed by these seniors additional education beyond high school is necessary. Approximately 48 percent of the respondents either did not respond or said they wanted jobs which, in the opinion of the author, might require no additional education beyond high school. This figure includes such listings as military, housewife, sales, agriculture, etc. On the other hand, some of those jobs included in this 48 percent might well require additional education, or additional education might be valuable in these jobs, such as clerical work, sales, electrical (or electronics), etc. Table 3.15 presents these data in greater detail.

Student Employment. Only about 36 percent of the seniors queried did not at the time of the survey have part-time jobs. Less than one percent did not respond to the question. Over 63 percent of the respondents, or 2507 individuals (boys: 1434; girls: 1073) were employed part-time. The percentage of employed males (73.96) exceeded the percentage of employed females (52.86) by more than 21 percent. These data may be found in Table 3.16.

TABLE 3.16

Seniors' Employment

Employed	Male		Female		Total	
	Number	Percent	Number	Percent	Number	Percent
No Response	26	1.34	10	.49	36	.91
Yes	1434	73.96	1073	52.86	2507	63.16
No	479	24.70	947	46.65	1426	35.93

Occupational Aspirations. Seniors were asked, in Question 22 of the Survey instrument, to name the profession or job for which they would most like to prepare if they intended to take advanced technical, business, or trade training or attend college. The responses, both numerically and by percentages, to this question so closely parallel those cited above, page 25. that we think it is unnecessary to repeat them here. Surely, however, if interest is a comparison of the percentages of those who responded that they sought clerical positions and those who wrote they wanted to be salesmen. Four hundred fifty respondents answered to Question 15 that they wanted clerical positions; these respondents constituted 11.8 percent of the total. Three hundred fifty-seven respondents, 9.01 percent of the total, answered Question 22, similarly. If these 357 students understood Question 22 correctly, we may assume that a large proportion of the seniors who look forward to clerical positions expect to take advanced training prior to seeking a job. Likewise, 75 respondents said in answer to Question 15 that they wanted sales positions; 50 responding seniors said, in answer to Question 22, that they expected to take advanced training prior to entering sales work.

Evaluation of High Schools. Seniors were asked to rate their respective high schools on several items by the use of a tripartite scale. On many of the items the ratings tended to follow a pattern, which, if they were plotted on a graph, would follow rather closely the familiar bell-shaped curve. That is, the most usual rating on each item was the middle rating "good", while the "excellent" and "poor" ratings often were of strikingly similar proportions. Those responsible for the supervision of high school programs might want to take special note of the fact that, in the opinion of the responding seniors, their schools fail most often in helping them with their personal problems. The high schools evidently succeed most often in helping their pupils to plan to attend college. Approximately 25 percent of the respondents are dissatisfied with the help they receive as they attempt to choose a vocation. Vocational counseling received more "poor" ratings from both boys and girls than any other item rated except counseling on personal problems. These data are presented in greater detail in Table 3.17

TABLE 3.17

Ratings of High School Services, Facilities, Experiences

Item	Male Excellent	Male Good	Male Poor	Female Excellent	Female Good	Female Poor
	Percent			Percent		
Counselling on School Problems	20.47	56.78	20.68	19.32	59.39	19.91

Social Activities	19.13	55.96	22.28	19.17	60.52	18.97

Perceived Help By Student Rank. Those seniors who think of themselves as being in the middle or lower thirds of their respective classes are most dissatisfied with the help they receive from their high schools relative to their post-high school educational and occupational plans. Nearly 67 percent of the males in the lower third of their classes and 55 percent of the females think they get little or only some help. Sixty-one percent of the males and 52 percent of the females in the middle third of their classes think the help they receive is inadequate. But a rather surprising 56 percent of the males and 52 percent of the females in the top third of their classes also think only some or little help is provided them with their post-high school occupational or educational plans. (Question 12.) Table 3.18 presents these data in greater detail. (The reader is cautioned to add the percentages in this table in vertical colums if he attempts to get near-100 percent figures. The data are not constructed so as to be able to be added horizontally.)

TABLE 3.18

Perceived Help With Post-High School Occupation and Educational Plans By Sex and High School Rank

Help Received	Male Top Third	Male Middle Third	Male Lower Third	Female Top Third	Female Middle Third	Female Lower Third
		Percent			Percent	
All Needed	20.83	13.94	12.84	24.86	19.14	15.29
Considerable, but could use more	21.97	23.95	19.27	22.64	27.10	27.65
Some, not much	31.44	34.52	34.56	32.78	31.93	30.59
Little or None	24.43	26.57	32.42	19.17	20.66	24.71

Plans For Work and Further Education. Most seniors are quite realistic as they contemplate the conditions under which they most are likely to continue their education. Twenty-six (26) percent of the girls and 19 percent of the boys would attend school full-time without working after graduation from high school. (These percentages are based on the total number of respondents. If we considered only those actually contemplating further education, the percentages would be higher.) Another 53.76 percent would attend full-time and work part-time, work full-time, and attend school part-time, or both work and attend school part-time. Rather unrealistically, 129 respondents, or 3.25 percent would both attend school and work full-time.

Training Desired by Non-College-Bound Seniors. Of those seniors who do not expect to go to college, 456 would be most interested in on-the-job training programs if they were to get further education. Another 212 would like to become apprentices; 179 are evidently impressed with the opportunities for training in military service schools, and 85 might enroll in a community college on a part-time basis. Table 3.19 presents these data.

TABLE 3.19

Interest In further Education By Non-College-Bound Seniors

Training	Male	Female	Total
Apprentice	168	44	212
Military Service School	139	40	179

Community College, part-time	25	60	85

CONCLUSIONS ON THE STUDY OF HIGH SCHOOL SENIORS

6,088 questionnaires were sent out with a return of 3,973 or 65.24% of the 1965 Kent County senior class.

49.9% were enrolled in non-college preparatory curriculums, mainly commercial and general.

84.0% were living at home with both parents.

76.0% had lived in Kent County 10 years or more indicating a high degree of stability.

52.0% of the seniors expect to go on to college.

30.94% of the seniors will be looking for a paying job after graduation.

31.4% of the seniors suggested more vocational education as the way their school could improve.

18.0% of the seniors believe that their high schools are adequately helping them to make plans for future education and/or occupations.

80.0% want additional assistance planning their occupational and educational futures.

25.9% of the parents insist or expect attendance in college after graduation.

56.0% would like to see their son or daughter attend college if they so wish.

40.8% of the fathers and 35.4% of the mothers did not complete high school.

13.5% of the fathers and 9.5% of the mothers are college graduates.

Nine hundred thirty-two (932) seniors indicated an interest in further education but not at a college level.

CHAPTER IV

A STUDY OF HIGH SCHOOL GRADUATES

Introduction. Members of the Executive Committee of the Kent County Vocational-Technical Education Survey thought it would be well to query the graduates of the high schools of the county. It was decided to send questionnaires to the graduates of the class of 1961, because by the Spring of 1965 many of these might well have found rather permanent employment for themselves or could have been well on the way to a baccalaureate degree. A fifty percent random sample of all of the graduates of 1961 was decided upon. However, by the time the survey was completed, a questionnaire had been sent to virtually every graduate because when a questionnaire was returned as undeliverable, the next person on the list was sent a questionnaire to replace the one returned by the Post Office as undeliverable. Post Office regulations require forwarding of first class mail for two years only. Proper addresses could not be located for many of the young men and women from whom we anticipated replies.

Number of Respondents. Approximately 2371 questionnaires were sent to high school graduates of 1961. Replies were received from 1067, or from approximately forty-five percent of the possible respondents. Usable replies were received from 533 men and from 531 women.

Place of Residence of Respondents. Over forty-one percent of the respondents now live in the city of Grand Rapids; nearly thirty-one percent of the respondents at the time of the survey lived in Kent County areas other than Grand Rapids, and just over twenty-seven percent were living outside Kent County. These data are presented in Table 4.1.

TABLE 4.1

Place of Residence of Respondents

	No Response	G. Rapids	E.G.R.	Walker	Wyoming	Others Kent Co.	Other	Total
Male	1	217	14	11	52	81	157	533
Female	2	228	14	13	58	82	134	531
Total	3	445	28	24	110	163	291	1064
Percentage	.28%	41.82%	2.63%	2.26%	10.34%	15.32%	27.35%	

Relative Permanency of County Residence. The large majority of graduates of Kent County high schools tend to remain as residents of Kent County, if we may judge by the responses of these respondents. Nearly sixty percent are still residents of Kent County, and another nearly nine percent lived in Kent County more than three years after graduating from high school. (It is possible, of course, that some respondents who are continuing to live in Kent County may have checked the response "over three years".) See Table 4.2 for complete details.

TABLE 4.2

Years Graduates Remained Residents Of Kent County After High School Graduation

	No Response	Less than 1 yr.	1-3 years	Over 3	Still here	Total
Male	11	98.0	76	43	304	532
Female	4	54.0	90	50	330	528
Total	15	152.0	166	93	634	1060
Percentage	1.42%	14.34%	15.66%	8.77%	59.81%	

Marital Status of Respondents. Nearly sixty percent of the graduates of the 1961 class remained single in the spring of 1965 when the survey was conducted. The female graduates tended to be married in greater proportions (about 48 percent) than the male graduates, only about thirty percent of whom were married at the time of the survey. Further details are provided in Table 4.3.

TABLE 4.3

Marital Status

	No Response	Married	Separated	Divorced	Spouse Died	Single	Total
Male	1	157	2	4	0	369	533
Female	0	253	3	4	2	268	530
	1	410	5	8	2	637	1063
Percentage	.09%	38.57%	.47%	.75%	.19%	57.92%	

Education After High School. Even if one excludes in his computations the advanced education and training which some of these graduates got while on-the-job, in the military services, and in apprenticeship, an amazing sixty-eight percent took additional formal education in business college, trade or vocational schools, colleges, adult education classes, or through correspondence. Well over half of these graduates entered regular colleges; significant numbers took other post-secondary training. See Table 4.4.

TABLE 4.4

Post-Secondary Education and Training

Training	Sex			
	Male	Female	Total	Percent
No Response	2	4	6	.56
None	26	69	95	8.94
On-the-Job	34	85	119	11.19

Correspondence	24	6	30	2.82
Military	90	6	96	9.03
Apprentice	22	0	22	2.07

College Attendance. Over forty percent of the respondents were attending college at the time of the survey. Presumably, many of these would have entered college shortly after finishing high school and would be about ready to receive their baccalaureate degrees. Fifty-eight percent of the respondents were not in college at the time of the survey. Table 4.5 presents these data.

TABLE 4.5

Present College Attendance Of Respondents

	No Response	Full time	Part time	No	Total
Male	6	236	44	247	533
Female	6	123	26	375	530
Total	12	359	70	622	1063
Percentage	1.13%	33.77%	6.59%	58.51%	

Colleges Presently Attended. Of those respondents who are presently attending a college or have been granted a college certificate or degree the largest proportion (seventeen percent) have attended or are attending Grand Rapids Junior College. The next largest proportion (sixteen percent) have attended or are attending Michigan State University. Nearly ninety percent of the Kent County high school graduates attend college within the state of Michigan. These data are given in greater detail in Table 4.6.

TABLE 4.6

College Presently Attended Or Granting Degree

Adequacy of High School Preparation for College. Just over eighteen percent of those who went to college thought their respective high schools did a completely adequate job of preparing them for their post-secondary education. Nearly eighty-two percent, then, thought their high school preparation could have been more adequate. Details are presented in Table 4.7.

TABLE 4.7

Perceived Adequacy Of High School Preparation For College

Adequacy	Sex Male	Female	Total	Percent
Inadequate	35	18	53	7
Fair	113	63	176	24
Very good in ways, could have been better	178	180	358	44
Excellent	50	81	131	18

Perceived Adequacy of Preparation for Employment. Nearly fifty-five percent of the respondents thought their high school preparation for employment adequate, whereas slightly over nine percent thought their preparation inadequate. Three hundred eighty one (381) or nearly thirty six percent of those returning questionnaires did not respond to this item. Table 4.8 presents this data.

TABLE 4.8

Adequacy Of Preparation For Employment

	No Response	Adequate	Inadequate	Total
Male	195	282	56	533
Female	186	302	42	530
Total	381	584	98	1063
Percentage	35.84%	54.94%	9.22%	

Parents' Attitudes Toward College Attendance. Eighty-five percent of the respondents thought their parents either expected them to attend college or wanted them to attend if the respondent himself wanted to go. Only one percent thought attendance would displease their parents. Additional data are presented in Table 4.9.

TABLE 4.9

Perceived Parental Attitudes Toward College Attendance

Attitude	Male Graduate		Female Graduate			
	Mother's Attitude	Father's Attitude	Mother's Attitude	Father's Attitude	Total	Percent
No Response	12	23	15	47	67	3.1

Didn't Want	1	2	10	9	22	1.0
Wouldn't Allow	0	0	1	0	1	.0

Effect Of Financial Assistance On College Attendance. One hundred seventy-five respondents answered they would have attended college if financial assistance had been available. Thus, an additional sixteen percent of those answering the questionnaire may well have liked to attend college, and might well have attended except for the expense of attendance. See Table 4.10.

TABLE 4.10

Likely Additional College Attendance If Financial Aid Available

	No Response	Yes	No	Doesn't Apply	Total

Specific Additional Training Or Education Desired. Nearly fourteen percent of the respondents would like an opportunity to engage in on-the-job training with a company or industrial firm. Another nearly thirteen percent would like to attend a community college on a part-time basis. Still another eight percent would like adult education classes. Clearly the training and education aspirations of these respondents have not been completely satisfied as yet. See Table 4.12.

TABLE 4.12

Reasons For Non-School Attendance Now. Most respondents cite family responsibilities as the principal reason why they are not now continuing with their education or training. The next largest group find finances to be the inhibiting factor. (Suggestion: compare this group with those who said they would attend if more money had been available.) Table 4.14 presents these data.

TABLE 4.14

Rank In Graduating Class. Comparatively few of these respondents think they were in the lower third of their high school graduating class. Almost equal numbers think they were in the top third and middle third of their classes. Because we received responses from just forty-five percent of those questioned, it would be difficult to say with certainty that these perceptions as to high school rank are inaccurate, but the probability that these respondents are over-estimating their rank is a strong one. See Table 4.15.

TABLE 4.15

High School Graduating Class Rank

	No Response	Top 1/3	Middle 1/3	Lower 1/3
Male	5	209	246	73

Titles of Positions Held. The diversity of employment opportunities in the Kent County area is somewhat evidenced by an examination of the job titles of the positions held by the respondents. Only clerical jobs attracted more than ten percent of those answering our survey. Over six percent were in the military services at the time of the survey, and over five percent were in sales positions. No other job category attracted as many as four percent of the respondents. Table 4.20 presents these data in greater detail.

Perceived Role Of Grand Rapids Junior College. These Kent County high school graduates in startling proportions misconceive the role of the only publicly supported institution of higher education in Kent County. Only twenty-two percent realize that G.R.J.C. is an institution with a unique task. All others see it as fulfilling a different role. Data are given in Table 4.24.

TABLE 4.24

CONCLUSION OF THE 1961 GRADUATE SURVEY

2,371 questionnaires sent out – 1,067 returned for 45%; 50% girls; 50% boys

59.8% still lived in Kent County

59.9% were still single: 69% of the boys – 31% of the girls

54.0% had some type of college after graduation

5.0% went to trade or vocational school after graduation

13.4% indicated they would have attended a trade or vocational school after graduation had it been available

54.9% stated that high school adequately prepared them for employment

45.0% did not respond to the question or stated that high school was inadequate in their preparation for employment.

After being out of school four (4) years, 68% are still interested in further study.

56.0% stated that they followed a college preparatory course in high school

23.0% stated that they followed a general course in high school

39.0% stated that if two years of college work or some type of technical or semi-professional vocational training had been available at graduation time, it could have changed their plans

54.0% stated that the opportunities youth have in receiving training or education beyond high school in the area is less than adequate.

After being out of school 4+ years, 22.5% are still undecided what type of work they want to do.

The Survey indicated that many students went from job to job and are still looking for that job skill they need for employment. Had there been an adequate vocational offering for these students back in 1959–1960–1961, many would now be skilled technicians in their chosen field.

CHAPTER V

PARENT QUESTIONNAIRE

Introduction. This survey instrument was designed for parents of seventh graders. The purpose was to gather information from the parents as to what they wanted in future education for their children. Seventh graders were chosen because parents with children of this age are beginning to consider what their future schooling should be. Another reason was that if we found the needs of a group at this school year level then we would still have time to do something for them in high school and post-secondary programs.

The questionnaire was taken to all public and parochial schools having seventh graders. They were delivered to the seventh grade teachers with the approval of the school's administration. The instrument was taken home by the student, filled out and returned to the teacher.

Most schools cooperated in this program. It is estimated that approximately 7,000 questionnaires were taken home out of 8,482 possible seventh graders. A total of 5,547 were returned, or approximately seventy-nine percent. A copy of the questionnaire may be found in the appendix.

Father's Occupation; How Long Family Has Resided in Kent County. An attempt was made in this question to determine how mobile a society we have in Kent County as represented by the parents of the pupils of one grade. Almost fifty percent reported that they had lived in Kent County ten years or more. Data are found in Table 5.1

TABLE 5.1

Specific Skilled Occupations Parents Encourage Children To Consider. Parents of seventh grade children encourage their children to enter a large number of skilled occupations. Those occupations most frequently mentioned were: practical nursing, electrician, auto mechanic, barber and/or beautician, nurse's aid, machinist, and carpenter. Additional data may be found in Table 5.9.

TABLE 5.9

What skills would you encourage your child to enter?

Encouragement Of Children To Enter Professions. Over forty-seven percent of the responding parents encourage their seventh grade children to consider entering the professions. Over half of the parents, however, either do not encourage their seventh grade children to consider entering the professions, or did not respond to the question. Table 5.10 presents this data.

Of those parents who encourage children to enter the professions, the greatest number by far encourage their children to prepare for teaching. Large numbers also encourage their children to prepare for the nursing profession, or to become medical doctors or dentists. See Table 5.11

Many parents (nearly 200) listed occupations (about fifteen) which are not considered professions, but for which post-secondary vocational-technical education would be a requirement.

TABLE 5.10

Parents' Opinions Regarding College Attendance. Nearly fifty-six percent of the parents responding to the survey think all those who can profit from post-secondary academic and/or occupational education should have the opportunity to avail themselves of such educational opportunities regardless of the student's own financial means. Another thirty-seven percent think all who wish to try to achieve in such post-secondary educational curriculums should have the opportunity to do so. These and further data can be found in Table 5.12.

TABLE 5.12

Who do you think should go to college?

Superior academic ability only	56	1.01%
Those with ability & financial means	177	3.19%
Those that can profit from either academic or occupational education regardless of financial means	3099	55.91%
All who wish to try	2060	37.16%
Others	54	.97%
No Response	97	1.75%

Semi-professional, Technical, And Business Occupations Parents Encourage Children To Consider. Nearly sixty percent of the parents responding to the survey answered that they do encourage their children to consider preparing to enter a semi-professional, technical, or business occupation. Data may be found in Table 5.13.

TABLE 5.13

Do you encourage your seventh grade child to consider preparing to enter a semi-professional, technical or business occupation?

Yes	3319	59.89%
No	1704	30.75%
No Response	519	9.36%

Table 5.14 lists those occupations parents say they encourage their children to consider. Nursing is again mentioned most often; stenography is mentioned many times; other semi-professional occupations are mentioned so often as to warrent serious attention being given to an analysis of curriculums presently available to determine if there is an opportunity available to young people in Kent County to prepare for such occupations.

Additional Education Desired By The Parents Themselves. Nineteen percent of the fathers and eleven percent of the mothers would like additional education for job improvement and nine percent of the fathers and fifteen percent of the mothers would like additional education for self improvement. Six percent of the fathers and seven percent of the mothers would like to work toward a college degree. There are, then, 3788 parents of seventh graders in Kent County who would like additional education themselves. See Tables 5.16 and 5.17.

TABLE 5.16

What additional education would the father like?

No response	1511	27.27%
None	1933	34.89%
Work or college degree	339	6.12%
Courses for job improvement	1077	19.44%
Courses for self improvement	513	9.26%

Courses for self improvement	847	15.29%
Other	262	4.73%

Occupation Of Head Of The Household. The heads of the households of the respondents to this survey represent a wide variety of occupational classifications. Twenty-two percent are skilled workers, seventeen percent are self employed, and fifteen percent are employed in management positions. Data are to be found in Table 5.18.

TABLE 5.18

The occupation of the head of the household would be considered as follows.

No response	238	4.29%
Self employed	948	17.11%
Professional	516	9.31%
Management	881	15.90%
Office Worker	303	5.47%
Skilled worker	1247	22.50%
Semi skilled worker	568	10.25%
Laborer	708	12.78%
Unemployed	133	2.40%

Respondent Completing Questionnaire. Mothers completed over half of the questionnaires returned. A gratifying thirty percent of the returned questionnaires were completed by both parents. See Table 5.19.

TABLE 5.19

Who completed the questionnaire?

No response	74	1.34%
Father	866	15.63%
Mother	2894	52.25%
Both	1667	30.10%
Guardian	38	69%

PARENT QUESTIONNAIRE CONCLUSIONS

8,482 seventh graders 5,547 questionnaires returned for 65%

With 49.65% of the parents having lived in the county 10 years or more, it could be said that we have a stable labor force in Kent County.

37.5% of the seventh graders' fathers and 30.1% of the mothers did not finish high school.

More mothers (44%) graduated from high school than did fathers (28%). More fathers (14%) were college graduates than mothers (7%).

One out of every five mothers of seventh graders is working at a job other than housewife.

62% of the fathers are employed in the City of Grand Rapids.

Parents indicated that 910 sons and daughters would be looking to the high school for vocational training.

50% of the parents indicated they would encourage their child to prepare for and enter a skilled trade, these skilled areas being welding, air conditioning and refrigeration, auto body repair, radio and TV repair, auto mechanic, carpenter, cosmetology, dressmaking and tailoring, electrician, machinist, nurses aid, plumbing, practical nurse, and printing.

50% of the parents would like their child to consider preparing for a semi-professional, technical or business occupation. (Many of these should be considered as part high school programs.)

The occupation of the head of the household:

Management	15.90%
Professional	9.31%
Self-employed	17.11%
Office worker	5.47%
No response	4.29%
Skilled worker	22.05%
Semi-skilled	10.25%
Laborer	12.75%
Unemployed	2.40%

One-third of the questionnaires were completed by both mother and father.
There was a definite indication of desire for parents of seventh graders to have vocational offerings that would prepare their sons and daughters with job entry skills, to be offered in our schools.

One out every five fathers would like course work to improve their jobs.
3050 fathers and mothers indicated an interest for more course work for their improvement.

CHAPTER VI

A STUDY OF THE NEEDS OF BUSINESS AND INDUSTRY FOR TRAINED PERSONNEL

Introduction. The Executive Committee of the Kent County Vocational-Technical Education Survey examined several instruments which had been used in previous studies to determine the needs for trained personnel in business and industry. At the direction of the Committee, the director and the committee chairman met with several leaders of business and industry to solicit their help in selecting an appropriate instrument for use in Kent County. These business and industry leaders were convinced the sample instruments which they were shown were too complicated, and they advised that a much simpler questionnaire be adopted.

Much of the credit for the format of the Employment Survey which was finally approved goes to Mr. Philip de Journo of Wurzburg's and his staff. A copy of the questionnaire used can be found in the appendix.

The Grand Rapids Junior Chamber of Commerce volunteered the services of some of its members in distributing the questionnaire to those employers in Kent County who employ more than 100 employees. Mr. Miles Parks, a member of the Junior Chamber of Commerce organized this part of the effort. Those employers of more than 100 employees not contacted personally by a member of the J.C.C. were contacted by a member of the Grand Rapids Junior College faculty, either the director of the survey or Mr. Robert Duffy. Questionnaires were sent by mail to all employers of more than ten full-time employees but less than 100 employees. In addition, all doctors, dentists, and lawyers were sent questionnaires. Doctors and dentists were sent questionnaires because it was anticipated that national legislation might well substantially increase the need for personnel with professional and/or semi-professional medical training (subsequent events have substantiated this judgment), lawyers were sent questionnaires because we felt they might have a significant need for stenographers. A follow-up letter was sent to each employer who did not respond to our initial request.

One hundred-fifty (150) establishments employing over 100 employees were contacted; returns were received from 91 of these. In addition, approximately 1350 other employers were mailed questionnaires; returns were received from 333 of these. Four hundred twenty-four (424) returns were received in total.

Businesses Responding. Table 6.1 presents the types of businesses from which returns were received and the number of returns received from each type of business.

Training Recommended for Present Employees. Employers were asked, in one part of the Employment Survey, to suggest programs or courses which would be of value to their present employees, courses or programs which would "help adults upgrade job competencies". Employers suggested thirty different courses or programs which they thought ought to be offered. Table 6.2 lists the programs and courses employers recommended for adults and the number of times such recommendations were made.

TABLE 6.2

Courses and Programs Recommended for Adult Employees

Training Recommended for Propsective Employees. Employers were also asked what "new or expanded vocational-technical curriculums or courses. . . would be of value to (their) prospective employees" if such "curriculums or courses were to be offered in high schools of Junior College". Again, employers responded with a variety of suggestions. As one might well expect, employers often suggested that prospective employees receive training in the same skills recommended for their present employees. Table 6.3 presents those courses or curriculums recommended by employers for prospective employees and the number of times each recommendation was made.

TABLE 6.3

Other Recommended Programs. Employers recommended 39 different programs be established to improve "education and training opportunities in the Kent County Area". Thirteen of these were recommended for establishment at the high school level; eleven of these were suggested for establishment at the junior college level; for 18 of these suggestions no educational level was recommended. Table 6.4 presents these data in greater detail.

TABLE 6.4

Employment of High School "Drop-Outs". Nearly fifty-nine (59) percent of the employers did not respond to the question about the employment of high school "Drop-outs". Presumably these employers do not hire non-graduates. One hundred eighty-three (183) employers (about 41 percent) do hire "drop-outs". Table 6.6 presents those job titles for which drop-outs are hired and the number of respondents who wrote that they hire drop-outs in these job catagories.

TABLE 6.6

Titles of Jobs for Which "Drop-Outs" Are Hired and Number of Respondents Hiring "Drop-Outs" for These Jobs

Job Titles	Number of Respondents
Building Trades	6
Clerical	14
Domestics	8
Furniture Industry	4
Maintenance	9
Metal Industry and Mechanical	18
Sales, Waitresses	12
Stockroom Clerk	21
Miscellaneous	131

Frequency of Employment of "Drop-Outs". Even employers who do hire "drop-outs", however, tend to do so only seldom. A majority of the responding employers wrote that they employed "drop-outs" infrequently or almost never. Less than half of the respondents hire "drop-outs" as a common practice. Table 6.7 presents the frequency of employment of "drop-outs".

TABLE 6.7

Frequency of Employment of "Drop-Outs"

Frequency	Number
Common Practice	102
Infrequently	81
Almost Never	45

Employment of High School Graduates Without Work Experience. The job titles of those jobs for which employers regularly hire high school graduates without work experience are listed in Table 6.8. Included in this table are the employer responses as to the frequency of their employment of high school graduates. High school graduates are, evidently, hired most frequently for clerical jobs.

TABLE 6.8

Titles of Jobs for Which High School Graduates Are Hired
and
Frequency of Employment

Job Title	Frequency of Employment

Adequacy of High School Preparation. Of the 328 employers who responded to the question asking if the high schools had adequately prepared their graduates for employment, 229 employers wrote that the high school graduates were only partially or inadequately trained. One hundred nineteen employers of the 328 respondents to this question thought high school graduates adequately trained for employment. These data are presented in greater detail in Table 6.9.

TABLE 6.9

Adequacy of Preparation for Employment of High School Graduates

Adequacy	Number of Respondents
No Response	76
Adequate	119
Partially	158
No	71

Rather surprisingly, those positions for which employers most often hire high school graduates are the very ones for which employers think the graduates are ill-prepared. Eighty-two employers wrote that clerical workers are only partially or inadequately prepared, 19 responded that laboratory technicians are ill-prepared, all 15 who hire high school graduates in sales positions thought their preparation less than completely adequate; 10 employers in the building trades thought employees inadequately prepared, and 14 employers in the metals industries responded that high school graduates were not completely trained. Rather obviously if employers are to be satisfied with the preparation of their prospective employees, high schools will have to do a better job of training their graduates for employment, or high school graduates will need post-secondary training to meet employer expectations.

Employment of Junior College Graduates. The titles of those jobs for which employers hire junior college graduates without work experience are to be found in Table 6.10. Here, too, are to be found the data regarding the frequency of employment of junior college graduates. Those positions for which Grand Rapids Junior College has curriculums specifically designed to prepare graduates are those which employers list most frequently.

TABLE 6.10

Job Titles and Frequency of Employment of Junior College Graduates

Frequency	Nurse	Lab Tech.	Clerical	Sales	Bldg.	Mech.	Misc.
Common	85	17	78	22	9	12	10
Infrequently	2	9	22	5	3	6	4
Never	1	3		3	2	2	1

Adequacy of Junior College Preparation. A large majority of employers think junior college graduates adequately prepared for employment. Respondents 312 times checked that junior college graduates are partially or inadequately prepared; 180 employers think junior college graduates partially or inadequately prepared. These data are presented in Table 6.11.

TABLE 6.11

Adequacy of Preparation by Junior College

Adequacy	Number of Respondents
Adequate	312
Partially	120
No	60

Thirty-seven employers think clerical junior college graduates employed in clerical positions only partially or inadequately trained; eleven employers think graduates employed in sales lack complete preparation, and 10 and 8 employers think graduates serving in the metal industries and as laboratory technicians, respectively, lack thorough preparation.

Perceived Adequacy of Vocational-Technical Education Facilities and Support For Additional Facilities. Only 44 respondents think existing educational facilities adequately meet the needs of their establishments for trained employees. One hundred fifty-two think the present facilities are meeting needs fairly well, and 94 respond that the needs of their firms are being met only poorly by present facilities. Most of the respondents would support the establishment of area vocational school(s) for high school occupational training (a total of 165 respondents) or expanded technical-vocational offerings in the community college (a total of 139 respondents.) These data can be found in greater detail in Table 6.12.

Employers' Training Programs and Junior College Supplementation or Replacement of Them. One hundred eight of the employers responding to the survey wrote that they do have their own training programs for their employees. Twenty-four respondents checked they had no training program for their employees. Of those who do have training programs 25 thought Grand Rapids Junior College could supplement or replace their programs; another 31 of these wrote that Junior College might replace or supplement their programs. Seventeen firms who do not now have their won training programs responded that Junior College could establish training of value to their employees. These data can be found in Table 6.13.

TABLE 6.13

Information Offered Employees by Employers Regarding Educational Opportunities. Two hundred thirty-seven of the responding employers do inform their employees of opportunities available to the employees by which they might improve their job skills, but 108 employers do not attempt to inform their employees of these opportunities. Most of the employers (165) who do bring to the attention of their employees educational opportunities available to them do so through personal interviews; 23 employers use a house organ for this purpose; and 40 employers use bulletin boards to accomplish the same goal. Seventy-eight (over 18 percent) of the employers returning questionnaires did not answer regarding their practice in this matter. It may well be that these 78 employers who did not respond to this item should be classed with the 108 who make no attempt to inform their employees of opportunities to upgrade their skills. If so, approximately 43 percent of the employers do not so inform their employees.

Employers' Recommendations to Employees of Training and Institutions Offering Training. Employers who responded affirmatively when asked if they told their employees about opportunities available to them for improving their job skills were further asked to list the specific training recommended and the educational institutions suggested to their employees where such training is available. Employers recommended a wide variety of courses to their employees, principally at local educational institutions. Grand Rapids Junior College was listed as being recommended most often by employers; Davenport Institute ranked second. Grand Rapids Junior College was recommended for a wider variety of offerings than any other institution. Table 6.15 presents in detail those institutions recommended by employers and the training recommended.

CONCLUSIONS OF THE STUDY OF BUSINESS AND INDUSTRY

Of the 228 firms answering the question of "drop-outs" –

102 or 44% stated that hiring drop-outs was a common practice
81 or 36% stated that hiring drop-outs was done infrequently
45 or 20% stated that hiring drop-outs was almost never done

28% of those that hire recent high school graduates stated that the high schools were adequately preparing their graduates for entry into employment.

63% of those that hire community college graduates stated that the junior college adequately prepared their graduates for entry into employment.

15% of those returning the questionnaires thought that the existing educational facilities in Kent County were meeting the occupational and training needs of their company or firm.

85% thought the educational programs were not meeting their company's needs.

50% of those that said a need for better trained help was indicated, thought it should be done in an area high school vocational program. The other fifty percent (50%) were divided between 19% who wanted it done in expansion of present existing high school programs, and 31% who said they would support expansion of of junior college offerings in vocational education.

The survey indicated a need for trained persons in all fields of vocational education:

Agriculture
Home economics
Trade and industry
Business training
Distributive education
Cooperative training (on the job)

The survey also indicates that an area vocational center or school would be supported to do much of the training for these needed occupations.

Support was very evident that post high school training was needed in the Technical vocational occupations.

CHAPTER VII

SURVEY OF VOCATIONAL EDUCATIONAL STAFFS AND FACILITIES IN THE HIGH SCHOOLS OF KENT COUNTY AND GRAND RAPIDS JUNIOR COLLEGE

Item I Who is responsible for Vocational Education in the high schools?

Principle (17 high schools)
Superintendent (5 high schools)
Vocational Director (7 high schools)
None (2 high schools)

Item II How many students in the county?

9–12 grade (1964–65 school year) 27,246 students
9–12 grade (1965–66 school year) 29,106 students
31 high schools in the survey reported
12,674 students in out-county high schools
5,611 students in Grand Rapids High Schools
5,446 students in private or parochial high schools
10 high schools reported having only (10–12) grades
21 high schools reported having (9–12) grades

Item III How many vocational teachers are assigned to the senior high vocational program?

116 1/7 teachers

How many vocational teachers are certified for teaching vocational classes and reimbursement from state and federal vocational funds?

39 1/6 teachers
(6 agriculture)
(10 home economics)
(11 cooperative training coordinators)
(12 1/6 others)

Item IV How long are the class periods in high school?

55 minutes (Range - 42-70)

How many times per week do vocational classes meet?

5 times per week

Item V How many vocational education advisory committees are there in the county?

Grand Rapids (Public)		Out-County (Public)	
Machine Shop	(1)	Business	(2)
Electricity	(1)	Agriculture	(2)
Printing	(1)	General	(3)
Furniture Tech.	(1)	Home Ec.	(1)
		Auto Mech.	(1)

Parochial or Private Schools

None

Item VI How many high schools have a cooperative occupational training program?

14 high schools in 9 school districts
(5) Grand Rapids (Public)
(9) Out-county (Public)
(0) Parochial or private schools

Eleven (11) coordinators supervise and are certified by the State Department of Education.

There are 589 students in this program.

Item VII How many students are enrolled in vocational programs (excluding cooperative training programs)?

464	Agriculture
4,366	Business
235	Distributive education
1,830	Homemaking
1,934	Trade and industry

In the fields of business education and trade and industry there were schools that interpreted industrial arts programs and isolated business courses such as typing and bookkeeping as vocational courses.

Item VIII Number of students in the 1964 graduating class:

5,136

Item IX Number of the 1964 graduating class that enrolled in a 2 or 4 year college:

2,645 or 51% of the graduates

Item X Number of the 1964 graduating class that went on to a business, trade, technical or other vocational school:

243 or 4.7% of the graduates

Item XI Number of students in the 1962 graduating class:

3,141

Item XII Number of students of the 1962 graduating class that are still enrolled in a college program:

325 students

(Note: Only 10 schools had follow up records on college students to give the figure of 325. This represents 20% of the graduates from the 10 schools reporting.)

Item XIII How many districts participate in any Federal or State vocational programs?

Area Redevelopment Act	0
Manpower Development Training Act	1
National Defense Education Act	13
Vocational Education Act 1965	10

Item XIV Does your school have a job placement service?

Yes 13 No 18

Item XV Does your job placement office conduct an annual survey of local occupational opportunities?

Yes 6 No 7

Item XVI Has your school made a recent follow-up study of your graduates as requested by the Michigan Association of School and Colleges?

Yes 14 No 17

Item XVII How many schools offer no vocational classes other than business classes?

10 high schools

Item XVIII Data from schools by vocational occupational area

Occupational Area	Total Number of Students Enrolled	Number of Teachers	Number of first year courses	Number of Advanced courses
Agriculture	464	6	6	14
Business Education	7499	99.1	157	81
Distributive Education	405	9 1/6	20	7
Homemaking Education	2574	35 ½	51	52
Industrial Education	4217	63	82	91
Technical Education	459	6	12	9
Service Occupations	6	1	1	
Others				

Item XIX VOCATIONAL COURSES BEING OFFERED IN KENT COUNTY HIGH SCHOOLS

COURSES	1 Number of rooms in local district at secondary level.	2 Number of first year courses offered	3 Number of advanced courses offered	4 Number of teachers assigned to classes	5 Total number of students in classes	6 Average number of hours per day room is in use	7 New vocational facilities definitely scheduled for 1966–67 school year	8 New vocational facilities definitely scheduled for 1965–66 school year	9 Average number of hours per evening room is in use

SURVEY OF VOCATIONAL EDUCATION STAFFS, COURSE OFFERINGS AND FACILITIES IN GRAND RAPIDS JUNIOR COLLEGE

Item I Who is responsible for the direction of the vocational education program?
The departmental heads and college dean.

Item II What grades are offered at the college?
Grades 13-14 or the first two years of college.

Item III How long are the class periods?
53 minutes in length.
How many times per week do vocational classes meet?
3 to 4 times per week - business education
3 times per week - distributive education
3 times per week - home economics
4 times per week - trade and industry

Item IV How many advisory committees are there at Grand Rapids Junior College?

Drafting 1	Practical nursing 1	Secretarial 1
Mechanics 1	Dental asst. 1	
Electronics1	Data Processing 1	

Item V How many coordinators are assigned to the college vocational program?
Two coordinators.
How many teachers are certified for salary reimbursement from the state?
Fourteen teachers
How many teachers are assigned to the vocational program?
Thirty teachers

Item VI How many students are enrolled in the vocational program ?

Business education	- 400	Trade & industry	- 150
Distributive	- 80	Practical nursing & dental asst.	- 134
Homemaking	- 40		

How many students are enrolled in the cooperative training program?

Business education	- 14	Homemaking	- 4
Distributive education	- 28	Practical nursing & dental asst.	- 62

Item VII How many students were in the 1964 graduating class? 347 students
How many students were in the 1962 graduating class? 307 students

Item VIII In what federal and state programs does Junior College participate?
Area Redevelopment
Manpower Development Training Act
National Defense Act
Vocational Act of 1963

Item IX Vocational-Technical Occupational Areas Of Training Available At Grand Rapids Junior College

OCCUPATIONAL AREA	Area does not apply	Total number of students enrolled	Number of teachers	Number of full-time (30 teaching hours per week) teacher equivalents. Give fraction if necessary.	Number of first year courses	Number of advanced courses
Agriculture						
Business Education		400	15	12	17	18
Distributive Education		80	3	2	5	2

CONCLUSIONS OF THE SURVEY OF VOCATIONAL EDUCATION STAFFS & FACILITIES IN KENT COUNTY HIGH SCHOOLS AND GRAND RAPIDS JUNIOR COLLEGE

A total of 27,246 students were enrolled in the 9th through 12th grades during the 1964–1965 school year.

Thirty-one high schools participated in the survey.

Thirty-nine teachers in the county are certified vocational teachers by the state standards. Not counting vocational agriculture (6) and vocational home education (10) and the coordinators of cooperative training, we have only twelve (12) vocational teachers teaching vocational courses that measure up to the state vocational standards.

The great majority of the vocational classes only meet five times per week for one hour at each session.

It is reported that 8,829 students are enrolled in vocational courses. The great majority of this number are in industrial arts classes and classes that are preparatory to vocational courses.

51% of the 1964 graduates enrolled in a 2 or 4 year college program.
28% of the graduates from the class of 1962 are still in college.
32% of the high schools are participating in the Vocational Education Act of 1963 and
42% are participating in the National Defense Education Act
19% of the schools conduct annual surveys of local occupational opportunities
42% of the schools have an organized job placement service
32% of the schools offer no vocational classes except business training

There are 335 vocational classrooms being used -- a total of 15 hours per evening in the county.

The average number of hours per day vocational classrooms is used in 3.2 hours.

This survey indicates a very definite shortage of vocational offerings in the curriculum of the county's high schools. It also indicates a very small number of offerings for adults.

There is a definite need for preparatory classes in vocational education in the parochial schools.

This program should be aimed at the 75% of the students who need a saleable skill as non-college graduates.

We are training a very few graduates for entry type skills in the world of work.

Grand Rapids Junior College presently enrolls more than 900 students in post-secondary vocational curriculums.

Post-secondary curriculums are offered by Grand Rapids Junior College in the following vocational programs:

Business education
Distributive education
Homemaking
Trade and industry
Practical Nursing
Dental Assisting
Cooperative training

January 31, 1966

To – Superintendents of Kent County
Subject – Area Vocational Technical Survey

On January 8, 1965 Kent County Superintendents' Association nominated a committee that would study vocational education in Kent County and make recommendations as to how vocational education could be improved. The following committee was appointed:

Maurice Cochrane, Supt. Kent City Community Schools
Cornelius C. Bruggink, Supt. Godwin Hts. Public Schools
Bernard Kennedy, Director of Vocational Education,
Grand Rapids Public Schools
Wendell A. Shroll, Asst. Dean, Grand Rapids Junior College
Garrell A. Adler, Chairman, Vocational Consultant,
Kent Intermediate School District

The committee proposed that an area vocational survey be made in Kent County. Financing of the project was provided with Grand Rapids Secondary Schools, Grand Rapids Junior College and the Kent Intermediate School District each contributing $2,000.00, which was matched with $6,000.00 from Federal and State funds. Harold Feringa of Grand Rapids Junior College was appointed Director of the survey. The Kent County Vocational-Technical education survey has been completed, and the complete final report is in the process of being written.

This is a preliminary report with recommendations by the committee. It is hoped that the Superintendents' Association will study these recommendations and initiate an action program.

The following areas were surveyed:

Agriculture - Production Field - 68 farms
Agriculture occupations - 60 agricultural businesses
Business & Industry - 1500 questionnaires sent - 424 returned - 28%.
Parents of 7th graders - 8482 questionnaires sent - 5547 returned - 65%
Vocational Education staffs & facilities - 31 public & parochial high schools
serving 27,247 students
1961 graduates - 2371 sent - 1067 returned - 45% 50% boys
50% girls
1965 high school seniors - 6088 sent - 3973 returned - 65%

The committee will attempt to answer three questions in this report.

1. Is more vocational education needed in our county?
2. If the above answer is yes, where is it needed? (grade level)
3. How should the program be financed?

Conclusions:

I Training opportunities in vocational education should definitely be increased in the Kent County area.

II The committee proposes the following program to increase vocational education offerings and provide an equal curriculum in vocational education for all students, public and parochial.

a. Familiarization and exploratory program in courses related to vocational education for students in grades 7 to 10.

b. Area vocational-technical centers should be constructed, equipped and staffed in Kent County to provide curriculums suitable for the areas. Facilities should be designed primarily for 11th and 12th grade students but flexible enough to accommodate students below that level.

c. Increased and expanded offerings in vocational-technical programs at the 13–14 grade or junior college level. Many of the course offerings would be a continuing program of the area vocational center.

d. Additional programs for upgrading and retraining adults at both the secondary area center and the junior college.

e. Cooperative training program would continue as it is at the present time.

III There are two types of school organizational patterns which the committee would like the Superintendents to study.

a. Half day at the center and half day at the local school. Here the student would attend his home school for one-half the day taking his required academic subjects, and for one-half the day he would attend the vocational center. He would graduate from his home school and receive a certificate from the vocational center.

b. All day in the vocational center. Here he would be a full time member of the vocational school, take all of his subjects here and graduate from this school.

IV The committee recommends that a review be made of the possibility of including the following areas in a vocational curriculum:

a. Agriculture
b. Home economics
c. Trade and industry
d. Business education

e. Distributive education
f. Cooperative training
g. Others

The committee also recommends that committees from business-industry-labor, etc. be established to serve as advisory committees to determine the curriculum content for the area centers.

V Finance

a. The committee recommends area tax millage be submitted to the electorate of the Kent Intermediate School District exclusive of the Grand Rapids School District, or including the Grand Rapids School District with the approval of the Grand Rapids Board of Education, for construction, equipment, and operational costs for area vocational centers.

b. Funds may be available under the Vocational Education Act of 1963 at the rate of 50% for construction, 50% for equipment and 25% for instruction.

It is possible that additional funds may be obtained from the Elementary and Secondary Education Act of 1965, Manpower Development and Training Act, Economic Opportunity Act and the National Defense Education Act.

VI Committees

a. We recommend the Kent County Superintendent's Association appoint a general committee to act on the above recommendations.

b. It is suggested that sub-committees be appointed to study the following areas:

Finance
Curriculum
Facilities

c. The members of this committee have indicated a willingness to serve in an advisory capacity whenever needed.

Garrell A. Adler, Chairman
Maurice Cochran
Cornelius C. Bruggink
Bernard Kennedy
Wendell Shroll

APPENDIX

Note: Some of these survey instruments have been reduced in size for convenience in printing this report.

AGRICULTURAL OCCUPATIONS SURVEY

Kind of Business
Name of Business Date
Business Address
Total Number of People Employed
Number of Jobs: (1) Agricultural skills required
(Ex. Judging Livestock, Operation of Machinery, Soil Test, Etc.)
(2) Agricultural knowledge required
(Ex. Farm Mgt. Principles, Understanding Feed Requirements.)
(3) Agricultural knowledge helpful; not required
Requirements to Obtain Employment:
(1) Education (Circle one) High School, Short Course, Degree, Technical Training
(2) Age
(3) Investment (other than education)
(4) Experience (years)
(5) Other
Kind of Work (explain):

Opinion of the Number of Available Employees: (Circle)
(1) Adequate, (2) Inadequate, (3) Surplus
Number of Agricultural Jobs Presently Available
Income: Range to
Are you interested in cooperating with a local school to provide on-the-job-training or an apprentice-type program for a qualified high school senior interested in your kind of work. Yes
No
Comment

Would you be interested in having a group of high school students visit your business to obtain information on careers? Yes No

KENT COUNTY VOCATIONAL–TECHNICAL EDUCATION SURVEY
SURVEY OF FARM LABOR NEEDS

Introduction:

The Boards of Education and the administrators of the nineteen high school districts in Kent County and Grand Rapids Junior College are cooperating to gather information and opinions from farmers, business and industry, and parents in Kent County that will be used to improve vocational-technical education programs for employment-bound youth.

You can help us by completing this questionnaire as completely as possible. The results of of this survey will have an important effect upon vocational-technical education in this area for perhaps the next two decades.

The data gathered will be used for statistical analysis only; your farm will NOT be identified in the published reports.

1. Size of farm _____ (acres).
2. Kind of farming done:
   Crops: _____ (acres) _____ Livestock _____ (head)
3. How many full-time man equivalents work on your farm?:
   a. Self _____ (1.0 if full-time) _____ c. Hired _____ (express as 0.0)
   b. Family _____ (express as 0.0) _____ d. Total _____ (express as 0.0)
   Additional seasonal _____ What months? _____
4. Would you hire additional help if available and dependable? Yes____ No____ If yes:
   a. Full time? Yes____ No____
   b. Fraction of year? Yes____ No____ If yes, what months?
   c. Kind of work _____
   d. Years of agricultural education this help should have in
      (1) high school _____ (2) college
5. If present help left, would you fill the vacancy? Yes____ No____
6. Farm operator by age:
   a. Under 25 _____ c. 36-45 _____ e. 56-64
   b. 26-35 _____ d. 46-55 _____ f. 65 or over
7. How many years of agricultural education has farm operator had in
   a. High school _____ c. Adult education classes
   b. College _____
8. What types of adult agricultural education could a school offer that could be of benefit to you, the farm operator? (write in)
9. What is your estimated annual need for employees during the next five years?
   a. Part-time _____ Type of work _____
   b. Full-time _____ Type of work _____
10. What subject knowledge or skills would be of benefit to your employees? (write in)
11. What do you think should be taught in high school agriculture? (write in)
12. What training should boys have for future jobs on the farm? (write in)
13. If you have a son, when you discuss his occupational goals with him do you.
   a. Encourage him to make farming his vocation? Yes____ No____
   b. Encourage him to choose some vocation other than farming? Yes____ No____
   c. Other (write in) _____

HIGH SCHOOL INFORMATION SHEET

Directions: An attempt is being made to get information that might result in improving educational opportunities in this area. Your help is needed. Will you please help by answering each question appearing below: Be careful to answer each question as accurately and completely as possible. This is not a test, and the answers you give will not affect your grades. Neither your teachers nor other students will see your answers. DO NOT sign your name. Be sure to answer all questions according to directions. Thank you.

1. Sex (check one)

_____1. Male
_____2. Female

2. Which high school course, program, or curriculum best describes the one in which you are enrolled? (check one)

_____1. Commercial or Business Education
_____2. College or University Preparatory
_____3. Shop or Industrial Arts
_____4. Agriculture
_____5. General
_____6. Homemaking
_____7. Other (write in)

3. To the best of your knowledge, what is your academic rank in your high school graduating class? (check one)

_____1. Top third
_____2. Middle third
_____3. Lower third

4. With whom do you live while attending school? (check one) If adopted, answer for foster parents.

_____1. Mother and father
_____2. Only mother (with or without stepfather)
_____3. Only father (with or without stepmother)
_____4. Neither father nor mother
_____5. Other (write in)

5. How long has your home been in Kent County? (check one)

_____1. Less than a year
_____2. 1-2 years
_____3. 3-5 years
_____4. 6-10 years
_____5. Over 10 years
_____6. Do not live in Kent County

6. Do you plan to go to college? (check one)

_____1. No
_____2. Probably not
_____3. Probably so
_____4. Yes, definitely
_____5. Don't know

Directions: Answer questions 7 and 8 ONLY if your answer to question 6 above was response 3 or 4. (You probably or definitely plan to attend college.) If you don't plan to attend college, go on to question 9.

7. Which college do you hope to attend? (check one)

_____1. Aquinas College
_____2. Calvin College
_____3. Central Michigan University
_____4. Davenport Institute
_____5. Ferris State College
_____6. Grand Rapids Junior College
_____7. Grand Valley State College
_____8. Hope College
_____9. Michigan State University
_____10. Muskegon Community College
_____11. University of Michigan
_____12. Western Michigan University
_____13. Other college in Michigan (write in the name)
_____14. Other college outside Michigan (write in the name)

8. If you plan to attend college, but not Grand Rapids Junior College, which of the following statements best explains your reason? (check one)

_____1. Grand Rapids Junior College has no program in which I am interested.
_____2. Grand Rapids Junior College is too expensive.
_____3. I want to attend college away from home.
_____4. The courses and curriculums in Grand Rapids Junior College are not as good as those in other colleges.
_____5. Other (write in)

_____

9. What do you plan to do on a full-time basis during the first year after high school graduation? (Boys check only one; girls may check either one or two choices.)

_____1. Work on a job
_____2. Become a housewife
_____3. Enter military service
_____4. Work at home for parents
_____5. Attend college or university
_____6. Attend business college
_____7. Attend trade or technical school
_____8. Attend nursing school
_____9. Don't know
_____10. Other (write in)

10. How well do you think your high school is preparing you for what you plan to do after graduation? (check one)

_____1. Providing just what is needed.
_____2. Very well in some ways but in other ways preparation is not adequate.
_____3. Fairly well but all the training could be improved.
_____4. Poorly.

11. If you checked items 1, 2, or 3 in question 10 above, how do you think your high school could prepare you better? (write in) (If necessary, use the other side of this sheet to complete your answer.)

12. How much help have you received in high school to help you decide what occupation you want to enter, or in making your educational plans for after high school? (check one)

_____1. A lot of help; all I need
_____2. Considerable help, but I could have used more
_____3. Some help, but not very much
_____4. Little or no help

13.–14. How do you think your parents feel about whether you attend college after high school graduation? Check the one item in each column which you think best describes each parent's attitude.

MOTHER	FATHER
_____1. Insists or expects me to go	_____1. Insists or expects me to go
_____2. Wants me to go if I want to	_____2. Wants me to go if I want to
_____3. Doesn't care one way or the other	_____3. Doesn't care one way or the other
_____4. Doesn't want me to go	_____4. Doesn't want me to go
_____5. Won't allow me to go	_____5. Won't allow me to go

15. What kind of job do you look forward to having ten years from now? (Name the one job which would be your first preference.)

16.–17. What is the highest level of school attained by your father and mother? (check one for each parent)

MOTHER	FATHER
_____1. Eighth grade graduation or less	_____1. Eighth grade graduation or less
_____2. Some high school	_____2. Some high school
_____3. Graduated from high school	_____3. Graduated from high school
_____4. Business or trade school	_____4. Business or trade school
_____5. Some college	_____5. Some college
_____6. Graduated from college	_____6. Graduated from college
_____7. Don't know	_____7. Don't know

18.–19. Consider your older brothers and sisters. Check below the highest grade completed by each older brother and by each older sister.

BROTHER	SISTER
_____1. Eighth grade graduation or less	_____1. Eighth grade graduation or less
_____2. Some high school	_____2. Some high school
_____3. Graduated from high school	_____3. Graduated from high school
_____4. Some college	_____4. Some college
_____5. Business or trade school	_____5. Business or trade school
_____6. Graduated from college	_____6. Graduated from college
_____7. Don't know	_____7. Don't know
_____8. I have no older brother	_____8. I have no older sister

20. Which of your relatives have completed college? (check all that apply other than those mentioned above)

_____1. Grandparents (one or more) _____3. None

_____2. Aunt, Uncle, or cousins _____4. Don't know

21. Do you earn money while attending high school by working on a part-time job during the school year? (check one)

_____1. Yes _____2. No.

22. If you plan to take advanced technical, business, or trade training or to attend a college, what is the one profession or job of greatest interest for which you would like to prepare? (write in)

23. How would you rate the following high school services, experiences, or facilities? (Opposite each item check either "excellent", "good", or "poor".)

	Excellent	Good	Poor
_____1. Counseling or guidance on school problems.	1._____	2._____	3._____
_____2. Counseling or guidance on personal problems.	1._____	2._____	3._____
_____3. Counseling or guidance on vocational choice.	1._____	2._____	3._____
_____4. Counseling or guidance on college education.	1._____	2._____	3._____
_____5. Library materials and information on vocations.	1._____	2._____	3._____
_____6. Courses offered.	1._____	2._____	3._____
_____7. Social activities.	1._____	2._____	3._____

24. Under what conditions would you be most likely to get any further education after high school graduation? (check one)

_____1. Attend school full-time and not work.
_____2. Attend school full-time and work full-time.
_____3. Attend school full-time and work part-time.
_____4. Work full-time and attend school part-time.
_____5. Work part-time; attend school part-time.
_____6. I do not plan to attend school any more after high school graduation.
_____7. Attend school part-time and not work.
_____8. Other (write in)

ANSWER THE FOLLOWING QUESTIONS ONLY IF YOUR FUTURE PLANS DO NOT OR PROBABLY DO NOT INCLUDE GOING TO COLLEGE. (If you do plan to go to college, skip this entire section and check back over your answers.)

25. In which of the following types of training or education would you have the greatest interest? (check one)

_____1. Work for several years as a paid apprentice (helper) to learn a trade.
_____2. Take post-graduate high school work in the high school at night.
_____3. Enter military service for training.
_____4. On-the-job training with a company or industrial firm.
_____5. Correspondence study.
_____6. Attend adult education classes.
_____7. Enrollment in a community college on a part-time basis.
_____8. None of the above.

26. What is the one reason of most importance why your future plans do not include going to college? (check one)

_____1. Tired of school; had enough education.
_____2. Want to work and make money.
_____3. Too expensive; can't afford it.
_____4. Want to get married.
_____5. Parents don't want me to go.
_____6. People who don't go to college get ahead just the same.
_____7. Waste of time.
_____8. Can't make good enough grades.
_____9. Other (write in)

27. Would your plans not to attend college change if you had more money?

_____1. Yes
_____2. No
_____3. Maybe

KENT COUNTY VOCATIONAL-TECHNICAL EDUCATION SURVEY

EMPLOYMENT SURVEY

Introduction

The Boards of Education and the administrators of the nineteen high school districts in Kent County and Grand Rapids Junior College are cooperating to gather information and opinions from employers in Kent County that will be used to improve vocational-technical education programs for employment-bound youth.

You can help us by completing this questionnaire as completely as possible. The results of this survey will have an important effect upon vocational-technical education in this area for perhaps the next two decades.

The data gathered will be used for statistical analysis only; your firm will NOT be identified in the published reports.

Please return this questionnaire completed at once. Our report must be prepared this month.

Please use additional paper if the spaces provided for write-in answers are inadequate.

PART I

General Information

1. Firm name _____
2. Mailing address _____
3. Name of person reporting _____
4. Your job title _____
5. Your telephone number _____ Extension _____
6. Please check the space opposite the description which best identifies the activities of your firm. Check more than one if needed.

_____ 1. Agricultural Services
_____ 2. Advertising
_____ 3. Banking and Finance
_____ 4. Communications
_____ 5. Construction
_____ 6. Education
_____ 7. Entertainment and Recreation
_____ 8. Food, Dairy, Drink
_____ 9. Government
_____ 10. Health, Hosp., Medical, Dental
_____ 11. Hotel and Motel
_____ 12. Industrial Manufacturing
_____ 13. Insurance
_____ 14. Marine Service
_____ 15. Printing and Publishing
_____ 16. Professional — other than Medical and Dental
_____ 17. Real Estate
_____ 18. Retailing — other than Food, Drink, Dairy
_____ 19. Service Establishment
_____ 20. Transportation
_____ 21. Utilities
_____ 22. Wholesaling
_____ 23. Other (write in below)

_____
_____
_____

PART II

1. If vocational-technical programs were offered (perhaps evenings) to help adults upgrade job competencies, what courses would you recommend to be established which would be of value to your present employees? Please be specific.

2. If new or expanded vocational-technical curriculums or courses were to be offered in high schools or Junior College, which curriculums or courses would you recommend which would be of value to prospective employees of your firm? (Write in)

3. Please add any comments which you, or other officials of your firm may wish to make about the improvement of education and training opportunities in the Kent County Area. Include your suggestions as to the **kind** and **level** (examples: shoe repair, high school; electronics technology, Junior College) of educational programs which you think should be provided. Your comments will be of great help to the Study Committee.

Please list below the titles of those jobs your firm presently finds difficult (or impossible) to fill because qualified applicants are not available **locally** and a brief job description of each. Check in the appropriate box opposite the title and description the preferred educational level for employment entry, preferred sex of entering employee, and the average number of these jobs you estimate will be required each year 1965 through 1970.

JOB TITLE	JOB DESCRIPTION	ENTRY EMPLOYMENT PREFERRED EDUCATION LEVEL CHECK ✓				PREFERRED SEX OF EMPLOYEE CHECK ✓ IF EITHER SEX ACCEPTABLE LEAVE BLANK.		AVERAGE NUMBER NEEDED EACH YEAR 1965-1970
		Less Than H. S.	High School Grad.	Community College or Tech. Inst.	College 4 Years	M	F	

PART III

Employer Opinion and Practice

A. With respect to the requirements of your firm for **entry employment**, in what jobs do you employ young persons who have "dropped out" without finishing high school? Please put check marks under the headings which best describe your firm's operating policies.

Entry Job Title	Frequency of Employment		
	Common Practice	Infrequently	Almost Never

B. With respect to the requirements of your firm for **entry employment**, in what jobs do you employ young persons who are recent high school graduates without work experience? Please put check marks under the headings which best describe your firm's operating policy.

Entry Job Title	Frequency of Employment		
	Common Practice	Infrequently	Almost Never

1. Have the high schools adequately prepared their graduates for entry employment with your firm? (Check one)
   _____1. Yes, adequately
   _____2. Yes, but only partially
   _____3. No
2. If your answer was "only partially" or "No," in your opinion what must be done to remedy the deficiencies? (Write in)

C. With respect to the reauirements of your firm for **entry employment**, in what jobs do you employ young persons who are rece junior (community) college graduates without work experience? Please put check marks under the headings which best describe your firm's operating policy.

Entry Job Title	Frequency of Employment		
	Common Practice	Infrequently	Almost Never

1. Have the junior (community) colleges adequately prepared their graduates for entry employment with your firm? (Check one)
   _____1. Yes, adequately
   _____2. Yes, but only partially
   _____3. No
2. If your answer was "only partially" or "No," in your opinion what must be done to remedy the deficiencies? (Write in)

PART IV

1. To what extent, in your opinion, do existing educational facilities in the Kent County Area meet the occupational and training needs of your company or firm? (Check one)

   _____1. Very well _____2. Fairly well _____3. Poorly

2. If you think occupational education and training in the area need improvement, which of the following would you support? (Check all that apply)

   _____1. Substantial expansion of vocational education programs in the existing high schools.

   _____2. Creation of an area vocational school for secondary (high school) occupational training.

   _____3. Expansion of community college offerings in occupational education.

3. Is there a formally organized training program in your company or firm?

   _____1. Yes _____2. No

4. If "yes," please describe briefly each program.

   _____

   _____

   _____

5. If your answer to No. 3 above was "yes," would you expect that additional technical programs in Grand Rapids Junior College could replace or supplement your program?

   _____1. Yes _____2. No _____3. Maybe

6. Do you (the employer) now pay the tuition of employees who take training to upgrade their job skills? (Check one)

   _____1. Yes, in full

   _____2. Yes, in part

   _____3. No

7. If you pay (or would be willing to pay) the tuition of employees who take training to upgrade their job skills, under what condition do you pay or would you be willing to pay?_____

   _____

8. Do you inform your employees of educational opportunities they might take to improve their job skills?

   _____1. Yes

   _____2. No

9. If your answer to No. 8 above is "yes," how do you inform them? (Examples: Personal interview, house organ). (Write in)_____

   _____

10. If your answer to No. 8 above is "yes," please list the specific training you have recommended to employees in the past year and the institution offering such training. (Write in)

Course or Training Recommended	Institution Offering the Training

.....Graduation Class-Year Code Number

Responses are confidential and will be used for statistical purposes only.

INFORMATION SCHEDULE FOR HIGH SCHOOL GRADUATES

1. Where are you living at the present time? (Check one)

   .....1. Grand Rapids.
   .....2. East Grand Rapids.
   .....3. Walker City.
   .....4. Wyoming City.
   .....5. Outside one of the above areas, but within Kent County. Please write in the name of the school district. .....
   .....6. Other (write in). .....

2. How many years after high school graduation did you live in Kent County? (Check one)

   .....1. Less than a year.
   .....2. Over 1 year and less than 3 years.
   .....3. Over 3 years.
   .....4. I haven't left; I have continued to live in Kent County.

3. Marital Status? (Check one)

   .....1. I am married and living with my husband or wife.
   .....2. I am married but I am separated from my husband or wife.
   .....3. I was married but I am divorced.
   .....4. I was married but my husband or wife died.
   .....5. I am single, and I have never been married.

4. What type of further training or education have you received since graduating from high school? (Check all that apply)

   .....1. No additional training or schooling.
   .....2. On-the-job training at a place where I was employed.
   .....3. Business college.
   .....4. Trade or technical school.
   .....5. College or university.
   .....6. Adult education course at a local high school.
   .....7. Took correspondence course.
   .....8. Military service school.
   .....9. Apprenticeship.

5. Are you going to college at the present time? (Check one)

   .....1. Yes, full-time.
   .....2. Yes, part-time.
   .....3. No.

6. If you are going to college at the present time, or have been granted a college certificate or degree, please check which college you are attending or the college which granted the certificate or degree. (Check one)

   .....1. Aquinas College.
   .....2. Calvin College.
   .....3. Grand Rapids Junior College.
   .....4. Grand Valley State College.
   .....5. Hope College.
   .....6. Michigan State University.
   .....7. Muskegon Community College.
   .....8. University of Michigan.
   .....9. Western Michigan University
   .....10. Other college. (Write in name and location).....

7. If you went to college after high school graduation, in your opinion how well did high school prepare you for college work? (Check one)

.....1. My preparation was inadequate.
.....2. Fair, but all of it could have been better.
.....3. Very good in some ways, but could have been better in other ways.
.....4. My preparation was excellent.
.....5. Did not attend college.

8. If you entered employment (full-time or part-time) after high school graduation, in your opinion how well did high school prepare you for employment? (Check one)

.....1. My preparation was adequate.
.....2. My preparation was inadequate. (Explain, write in) .....

.....

.....

9-10. How do you think your parents felt about whether you attended college after high school graduation? Check the one item in each column which you think best describes each parent's attitude.

MOTHER	FATHER
.....1. Insisted or expected me to go.	.....1. Insisted or expected me to go.
.....2. Wanted me to go if I wanted to.	.....2. Wanted me to go if I wanted to.
.....3. Didn't care one way or the other.	.....3. Didn't care one way or the other.
.....4. Didn't want me to go.	.....4. Didn't want me to go.
.....5. Wouldn't allow me to go.	.....5. Wouldn't allow me to go.

11. If you DID NOT attend school after high school graduation or ARE NOT presently attending, would you have done so if more financial assistance had been available? (Check one)

.....1. Yes.
.....2. No.
.....3. Does not apply.

12. Are you presently interested in opportunity for further training or education? (Check one)

.....1. Yes.
.....2. No.

13. In which of the following types of training or education would you be most interested? (Check one)

.....1. Work for several years as a paid apprentice (helper) to learn a trade.
.....2. Take post-graduate high school work in the high school at night.
.....3. Enter military service for training.
.....4. On-the-job training with a company or industrial firm.
.....5. Correspondence study.
.....6. Attend adult education classes.
.....7. Enrollment in a community college on a part-time basis.
.....8. None of the above.
.....9. Other. (Write in).....

14. If you would be interested in further training or education, under which of the following conditions would you be most likely to get it? (Check one)

.....1. Full-time.
.....2. Part-time.
.....3. Combination of full and part time.
.....4. Other (Write in).....

15. If you are not going to school at the present time, which one of the following is the reason of most importance? (Check one)

.....1. Do not have time.
.....2. Opportunity not available within the community.
.....3. Financial reasons.
.....4. Family responsibilities.
.....5. Not interested.
.....6. Already have completed the school I attended after high school.
.....7. Too difficult to make grades.
.....8. Didn't take college preparatory subjects.
.....9. Now in military service.

16. To the best of your knowledge, what was your academic rank in your high school graduating class? (Check one)

.....1. Top third.
.....2. Middle third.
.....3. Lower third.

17. Which high school course or curriculum best describes the one which you took in high school? (Check one)

.....1. College and University preparatory.
.....2. General.
.....3. Business Education (Commercial).
.....4. Agriculture.
.....5. Fine Arts.
.....6. Technical or Shop. (Ind. Arts.)
.....7. Homemaking or Home Economics.
.....8. Other. Name it.....

18. If two years of college work or some type of technical or semi-professional vocational training had been available in the region when you graduated, how might this have affected your plans? (Check one)

.....1. Would not have been interested.
.....2. I might have planned to stay at home and take advantage of it.
.....3. Would definitely have taken advantage of the opportunity.

19. Tell what you think about the availibility of opportunities which youth have in the high school district in which you graduated in receiving training or education beyond high school. (Check one)

.....1. Adequate for all who desire more school.
.....2. Fair amount of opportunity but not all youth who desire more training find what they want available.
.....3. Poor opportunities, local youth should have more available opportunities.

20. Are you employed in some paying job at the present time? (Check one)

.....1. Yes, I am employed full-time in a paying job.
.....2. Yes, I am employed part-time in a paying job.
.....3. No, I am not employed in a paying job.

21. If you are employed in a paying job, tell what your job is called. If in military service, give branch and rating. (Be specific.) If not employed, write the word "none" in the space.
.....

22. List all other full-time jobs you have held since you graduated from high school. (Write in) .....
.....

23. Have you decided what type of work you want to be doing in the future? (Check one)

.....1. Yes.
.....2. No.

24. If your answer to 23 is yes, name the type of work you would like to be doing in the future. (Be specific) .....

25. In your opinion, which statement best describes Grand Rapids Junior College or any junior or community college? (Check one)

.....1. Upward extension of high school or grades 13 and 14.
.....2. Branch or extension of another college or university.
.....3. Separate institution with special task of its own.
.....4. Part of a four-year college.
.....5. Other. (Write in).....

26. In your opinion, what statement best describes most of the students who attend Grand Rapids Junior College, or any junior or community college? (Check one)

.....1. Those who are not able to make good enough grades in other colleges.
.....2. Those who do not have enough money to attend a college away from home.
.....3. Those who failed in other colleges.
.....4. Those who desire programs offered only at Grand Rapids Junior College.
.....5. Those who could succeed at any college.
.....6. Other. (Write in).....

27. If you had had an opportunity to attend a school following high school graduation, which one of the following would you have been interested in attending? (Check one)

.....1. A community college located in the area where you lived. (2-yr. college)
.....2. A four-year college or university.
.....3. A trade or vocational school.
.....4. None.
.....5. Attended college of my choice.

KENT COUNTY VOCATIONAL–TECHNICAL EDUCATION SURVEY

143 Bostwick, N. E.
Grand Rapids, Michigan 49502

SURVEY OF VOCATIONAL EDUCATIONAL STAFFS AND FACILITIES IN THE HIGH SCHOOLS OF KENT COUNTY

As you know, we are engaged in a study of vocational-technical needs in Kent County. The primary purpose of this study is to provide information upon which a comprehensive and coordinated plan can be developed for vocational-technical education in the Kent County schools and the development and implementation of that plan.

The purpose of this questionnaire is to gather information concerning existing vocational education programs, staffs, and facilities in Kent County. The results will be used for statistical analysis in reports to be published in conjunction with the Kent County Vocational-Technical Education Survey. When this study is completed, a copy will be sent to you.

For purposes of this study, consider vocational education as any of the courses in the areas of agriculture, business, home economics, industrial arts, and vocational education, or any activity or program that is designed to prepare high school students, grades 9-12, for employment and/or provide them with job entry skills.

Instructions

1. For most questions, no writing is needed; just check the answer that fits each item best.
2. Answer these questions on the basis of your 1964–1965 school year.
3. Write in any comments or explanations that you feel are necessary.
4. Return this questionnaire in the stamped addressed envelope by September 7, 1965.

Yours truly,

Harold Feringa, Director

Name of School district
Person completing questionnaire
Position of person completing questionnaire

Organization and Administration

1. How many high schools are in your school district? (write in)
   Senior High School(s)
2. Who is responsible for the direction of the vocational education program? (check one)
   Superintendent
   Asst. Superintendent
   Principal
   Asst. Principal
   Voc. Ed. Director
   Dept. Head
   Other (specify)
3. What grades are included in your high school buildings? (check all that apply)
   7-12
   9-12
   10-12
   Other (specify)
4. How long are your class periods in high school? (write in)
   Minutes
5. (a) How many vocational advisory committees are in your district? (write in)

   (b) In what areas? (specify)
6. Does your school have a cooperative occupational training program? (check)
   Yes
   No
7. How many coordinators are assigned to the senior high vocational program? (write in)

8. How many of these coordinators are certified for salary reimbursement from the State? (write in)

9. How many teachers are assigned to the senior high vocational program? (write in)

10. How many of these teachers are certified for salary reimbursement from the State? (write in)

11. What area(s) does your vocational (exclude co-op) program cover? (check all that apply)
    Agriculture
    Business Education
    Distributive Education
    Homemaking
    Trade and Industry
    Other (specify)
12. How many students are enrolled in these vocational (exclude co-op) programs? (write in numbers).
    Agriculture
    Business Education
    Distributive Education
    Homemaking
    Trade and Industry
    Other (specify)

13. What area(s) does your co-op program cover? (check all that apply)

Agriculture	Trade and Industry
Business Education	Other (specify)
Distributive Education	
Homemaking	

14. How many students are enrolled in these co-op programs? (write in numbers)

Agriculture	Trade and Industry
Business Education	Other (specify)
Distributive Education	
Homemaking	

15. What is the average number of hours per week that your co-op students work on-the-job? (check one)

15-20	20-25
Other (specify)	

16. What is the average number of classes each coordinator meets each week? (write in)

17. What is the average number of periods per week that your vocational students, in the following areas, are in vocational classes in school? (write in)

Agriculture	Trade and Industry
Business Education	Other (specify)
Distributive Education	
Home Economics	

Programs

18. Does your district participate in any federal or state vocational programs? (check appropriate answer)

	Yes	No
Area Redevelopment Act		
Manpower Development Training Act		
National Defense Education Act		
Other (specify)		

19. How many teachers are assigned to these programs? (write in)
20. Has your district ever participated in any of these programs in the past? (check)

	Yes	No
Area Redevelopment Act		
Manpower Development Training Act		
National Defense Education Act		
Other (specify)		

Guidance and Placement

21. Does your school have a job placement service? (check)
    Yes No
22. If yes, what position does the Director hold? (check one)
    Teacher
    Counselor
    Vocational Education Director
    Does not apply
    Asst. Principal
    Coordinator
    Other (specify)
23. Does your job placement office conduct an annual survey of local occupational opportunities? (check)
    Yes No Does not apply
24. Does your school maintain a file of occupational information briefs and pamphlets? (check)
    Yes No Does not apply
25. Has your school made a recent follow-up study of your graduates as requested by the Michigan Association of Schools & Colleges? (check)
    Yes No
26. What graduation class was this study done on? (write in)
27. How many years after graduation was this study done? (write in)
28. Under whose direction was this follow-up made? (check one)
    Superintendent
    Asst. Superintendent
    Principal
    Asst. Principal
    Guidance Director
    Counselor
    Vocational Education Director
    Coordinator
    Other (specify)
29. How many students were in your 1964 graduating class? (write in)
30, How many of the 1964 graduating class enrolled in a 2-year or 4-year college? (write in)
31. How many of your 1964 graduating class went on to a business, trade, technical or other vocational school? (write in)
32. How many students were in your 1962 graduation class? (write in)
33. How many of your 1962 graduating class are still enrolled in a college degree program? (write in)
34. If you have done a follow-up study, do you know what percent of the vocational students are working in occupations for which they were trained? (write in)
35. Please fill in the information requested below.
    Do not count any student or teacher more than once.

OCCUPATIONAL AREA	Agriculture	Business Education	Distribution Education	Homemaking Education	Industrial Education	Technical Education	Service Occupations	Other (specify)
Area does not apply								
Total number of students enrolled								
Number of teachers								
Number of full-time (30 teaching hours per week) teacher equivalents. Give fraction if necessary.								
Number of first year courses								
Number of advanced courses								

36. Please supply the information requested below. Count each room occupied a full school day once. (This may give you a fractional room.)

Reminder,

1. All of the information we seek is as of the 1964–1965 school year.
2. Only those classes, rooms, courses, and programs for high school students in grades 9-12 are to be counted.
3. In columns III and IV, please figure all courses on a year basis.

COURSES	I Does not apply	II Number of rooms in local district at secondary level	III Number of first year courses offered	IV Number of advanced courses offered	V Number of teachers assigned to classes	VI Number of full-time (30 teaching hours per week) teacher equivalents. Dannenberg, Raymond A.
Berrien County Vocational-Technical Education Research Study. Final Report.

Berrien County Intermediate School District, St. Joseph, Mich.
Western Michigan Univ., Kalamazoo. Div. of Field Services
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jun66 106p.

PROGRAM EVALUATION; *VOCATIONAL EDUCATION; TECHNICAL EDUCATION; QUESTIONNAIRES; SURVEYS; *EDUCATIONAL NEEDS; EDUCATIONAL FINANCE; SCHOOL SURVEYS; HIGH SCHOOL GRADUATES; EDUCATIONAL LEGISLATION; COMMUNITY COLLEGES; HIGH SCHOOLS; GUIDANCE PROGRAMS; STUDENT ATTITUDES; EMPLOYER ATTITUDES; PARENT ATTITUDES
BERRIEN COUNTY; MICHIGAN

Objectives of this county-wide study were to determine (1) the present and future vocational-tedchnical education needs of Berrien County, (2) where programs should be located, and (3) how they would be financed. Questionnaires were returned from (1) 3,211 parents of public school children, (2) 400 parents of children in private and parochial schools, (3) 2,112 public high school seniors, (4) 151 parochial school seniors, (5) 345 business firms, (6) 136 selected county school personnel, and (7) 1,250 public and parochial high school graduates in 1960 and 1964. Research and advisory committees were established for (1) business, industry, and agriculture, (2) public elementary and secondary schools, (3) community colleges, (4) private and parochial schools, (5) graduate surveys, and (6) legislation and finance. Recommendations included: (1) All vocational service areas should be up-dated and expanded and occupational preparation should be emphasized, (2) Use of the cooperative work-study method should be encouraged, (3) The schools' guidance program should be more concerned with occupational counseling, (4) Advisory committees should be used for re-evaluating programs, and (5) The adult program should be expanded. INTRODUCTION AND ACKNOWLEDGEMENTS

There is no doubt that the general American public is greatly concerned about vocational-technical education in the United States. Recent and current federal and state legislation concerning all aspects of vocational-technical education is evidence of this conclusion. A review of the numerous articles about occupational preparation in daily newspapers and periodicals further substantiates this conclusion.

More than thirty comprehensive studies on a county-wide basis have been completed or are being conducted in Michigan. This report, concerned with studying vocational-technical education in Berrien County, is one such investigation.

Many citizens of Berrien County gave willingly of their time and effort to make this completed report a reality. Among those who should receive special recognition are: (1) the Intermediate School District Board of Education; (2) the business, industrial, and agricultural firms in the county; (3) the executive committee and six research and advisory committees who carried out the study; (4) the Berrien County School Administrators' Organization; (5) the Lake Michigan College Administration; (6) a committee of Niles-Buchanan

industrialists; (7) the Twin Cities Industrial Management Training Committee; and (8) the Study Committee for the Benton Harbor Area on Reorganization.

This study, then, represents the thinking and effort of many leaders in the county. It is the hope of all concerned that the conclusions and recommendations of this report will be implemented as rapidly as possible.

CHAPTER I

Summary, Conclusions, and Recommendations

Summary and Conclusions

This study, concerned with determining the need for an expanded vocational-technical program on an area basis in Berrien County, was sponsored by the Intermediate School District Board of Education. Under the direction of an Executive Committee, a project director was employed on a half-time basis and six research and advisory committees were appointed.

The six research and advisory committees came to the conclusion, after nine months of study, that vocational-technical education should be expanded in Berrien County at both the high school and post-high school levels. The following brief summary is evidence supporting this conclusion.

After carefully reviewing the results of the questionnaires returned by 3211 public school parents, the Public Elementary and Secondary Schools Committee concluded that: "...overwhelming support seems to be indicated for the expansion of vocational-technical education that is to be financed on a county-wide millage." Based upon 400 ques-

tionnaires returned by the parents of private and religious school children, the Private and Religious Schools Committee arrived at a similar conclusion.

Of the 2112 public high school seniors completing questionnaires, over 50 percent plan to go on to some kind of further education on a full-time basis during the first year after graduation. Of the 1429 who stated their future plans included college, over 38 percent indicated they planned to attend Lake Michigan College. It is also interesting to note that of the 1980 students who answered the question, over 38 percent indicated an interest in advanced technical, business, or trade training providing opportunities were available in Berrien County. A tabulation of the 151 questionnaires filled out by the religious school seniors indicated similar results.

The Business, Industry, Agricultural Committee, after discussing the results obtained from a ten-page questionnaire returned by 345 businesses, concluded "the business, industrial, and agricultural firms in Berrien County have given a very positive expression of need for an expanded vocational-technical education program at the high school and post-high school levels." The above conclusion was reached after reviewing: (1) expected rate of employment; (2) supply of qualified employees; (3) employment practices concerning drop-outs, high school graduates, and those with post-high school education; and (4) opinions concerning the adequacy of existing educational facilities for vocational-technical

education in Berrien County.

A review of the data concerning curriculum, physical facilities and equipment further supports the contention that vocational-technical education in Berrien County should be expanded and is not currently available on an equal basis for all youth in the county. For example, one high school in Berrien County has $1,991 worth of equipment for teaching trade and industrial classes while another has equipment with an estimated value of $273,100. Many schools are not currently offering a broad sequence of courses in trade and industrial education; office and distributive education; agricultural education; and home economics education. Only five of the 14 high schools have an organized cooperative occupational education program. One other school has indicated that a cooperative program will be in operation next year. Many of the schools are not receiving maximum vocational reimbursement under the Smith-Hughes Act, George-Barden Act, and Vocational Education Act of 1963 due to such reasons as inability to employ a vocationally certified teacher and not being able to meet minimum curriculum and equipment standards.

A questionnaire was sent to the 1960 and 1964 public and parochial high school graduates. Of the respondents, about 33 percent of the public school graduates and 76 percent of the parochial school graduates indicated that there

were not a sufficient number of vocational courses offered in their local school districts. Fifty-nine percent of the 1964 class and 62 percent of the 1960 class indicated an interest in upgrading themselves, indicating a need for additional post-high school vocational-technical education within the immediate area.

The results on the questionnaire completed by the 413 Lake Michigan College students enrolled in occupational programs also has implications for an expanded vocational-technical program at the post-high school level. The conclusion of the Community College Committee was: "A more comprehensive program for the future will have to include industrial and service management training, automotive technologies, and other areas appropriate to the specific individual needs of the county."

When all available information had been tabulated, reviewed, and discussed, two meetings were held of the members of the Executive Committee and the chairmen and coordinators of each of the six research and advisory committees. At the second meeting held on April 21, 1966, the following resolutions and recommendations--directed to the Intermediate School District Board of Education--were made:

WHEREAS, the executive committee and chairmen and coordinators of each of the six research subcommittees concerned with the Berrien County Vocational-Technical Study have met in two general sessions on April 7, 1966, and April 21, 1966, and

WHEREAS, the need for an expanded vocational-technical education program at the high school and post-high school levels on an area basis was presented--based upon the reports and recommendations of the several subcommittees--and

WHEREAS, each of the members of the executive committee and chairmen and coordinators of the subcommittees were given an opportunity to write letters expressing opinions and concerns regarding a three-center proposal presented in writing prior to the April 7, 1966, meeting, therefore be it

Resolved, that the Executive Committee and chairmen and coordinators of each of the six research subcommittees concerned with the Berrien County Vocational-Technical Study submit the following recommendations to the Berrien County Intermediate School District Board of Education for their consideration.

RECOMMENDED:

1. That the vocational-technical education needs of Berrien County youth and adults be served by area vocational-technical centers as follows:

   a. That Lake Michigan College continue as a designated area vocational-technical education center for the purpose of serving post-high school age youth and adults.

   b. That two vocational-technical centers be designated for the purpose of serving as area centers for high school age youth and adults--one in the northern portion of the county and one in the southern portion.

2. That care and consideration be given to implementing the above recommendation so that: (a) all youth and adults in the Intermediate School District area are given equal vocational-technical educational opportunity and (b) maximum use is made of existing facilities and equipment.

3. That the area vocational-technical centers be supported by a voted Intermediate School District millage.

4. That the Intermediate School District Board of Education may enter into contractual agreements with school districts to build and/or operate facilities, with the Intermediate School District Board of Education serving in an advisory, coordinating and implementation capacity.

5. That an advisory committee be appointed by the Intermediate School District Board of Education to work with them in the formulation of more complete and specific plans concerning utilization of existing facilities, planning and constructing area centers and the general administrative organization and operation.

And be it further

Resolved, that a continuing public relations program be conducted to obtain a positive reaction to this much needed and worth-while program.

On behalf of the Executive Committee and the members of the six research subcommittees, we express our sincere wishes to the Berrien County Intermediate School District Board of Education and to the people of the Berrien County Intermediate School District in the accomplishment of the goals set forth in these recommendations.

As outlined in the resolutions and recommendations, the area center approach to an expanded vocational-technical program in Berrien County permits the offering of a wide range of courses, thereby providing students with many different curricula. Such programs can provide for the occupational training needs of both in-school and out-of-school youth and adults. The area vocational-technical center approach offers the following advantages:[1]

1. It provides for a broad tax base on an Intermediate School District basis.

2. It offers training opportunities to a greater number of persons than is possible in smaller schools serving individual communities.

3. It makes possible a broader administrative base and more comprehensive auxiliary services.

---

[1]State Board of Education, Establishing and Operating Area Vocational-Technical Education Programs in Michigan, Lansing: Division of Vocational Education, 1966. Pp. 1-2.

4. It makes available a greater range of curriculum offerings and, therefore, a greater range of occupational training choices.

5. It avoids duplication of equipment services and costs such as might prevail if a number of neighboring communities chose to offer similar training programs.

6. It provides for a degree of flexibility in operation that makes it possible to achieve rapid program adjustments and to meet emergency training needs quickly.

Specific Recommendations

Based upon the research and discussion included in this investigation, the following specific recommendations are made:

1. The Intermediate School District Board of Education should employ a full-time vocational-technical consultant to implement the recommendations of this study. Such a person should be knowledgeable in all areas of vocational-technical education including: (1) trade and industrial; (2) office; (3) distributive; (4) home economics; (5) agriculture; and (6) other related areas such as the health occupations, the apprenticeship program, and the cooperative work-study method.

2. The high school trade and industrial programs need to be re-evaluated as to their purpose. Many of the present programs do not lead to occupational competency; but are rather exploratory and preparatory in nature. The area centers, as recommended in this report, should be concerned

with providing salable skills in the trade and industrial occupations so as to assure all interested youth in Berrien County an equal educational opportunity. Among the curriculum areas which need to be expanded are: (1) electricity and electronics; (2) metals and plastics; (3) printing; (4) automobile and power mechanics; (5) drafting; and (6) many other related fields.

3. The high school business education programs, primarily concerned with preparing students for the office occupations, need to be re-evaluated in terms of the current and future impact of electronic data processing. Most of the existing programs are concerned with teaching the traditional shorthand, typing, and bookkeeping; with some emphasis upon a rudimentary knowledge of office machines. An expanded office occupations program in the area vocational-technical centers should include more emphasis upon data processing, office machines and office administration and management. While the present office occupations program has been providing a salable skill for many students, a more advanced and more specialized program is also needed.

4. Opportunities for students to enroll in a distributive education program for the purpose of preparing for the retailing, distribution and service occupations need to be expanded greatly in Berrien County. Such an expanded program in the area centers should include a minimum of at

least two one-year courses devoted to studying the American free enterprise system as well as such areas as retailing, advertising, salesmanship, display, and control. Currently, almost no high schools in the county are offering a two-year sequence of courses devoted entirely to the distribution of goods and services.

5. The home economics program in the area vocational-technical centers should be occupation oriented. The primary purpose of such a program would be to prepare youth for employment in such areas as: (1) hotels; (2) restaurants; (3) hospitals; and (4) other related fields.

6. The agricultural program in the vocational-technical centers should be concerned with preparing youth for the non-farm occupations which are related to the agricultural services. This would suggest a close working relationship with other vocational education areas such as: (1) business and distributive education; and (2) trade and industrial education.

7. Use of the cooperative work-study method should be expanded greatly in the area vocational-technical centers. The trend towards the use of specialized teacher-coordinators for each of the office, distributive, trade and industrial, and health occupations cooperative programs should be encouraged.

8. The secondary schools guidance program needs to be more concerned with occupational counseling. The area vocational-technical centers will be dependent upon an occupationally oriented counseling system.

9. Extensive use of advisory committees should be made for re-evaluating current curricula and planning future programs for the vocational-technical centers.

10. A greatly expanded vocational-technical program should be offered adults in Berrien County. The need for occupational training in specific areas should be determined with aid and counsel of the Michigan Employment Security Commission and a representative group of business, industrial, and agricultural leaders. The Intermediate School District vocational-technical consultant should serve to coordinate such an adult program to avoid duplication between the two high school vocational-technical centers and Lake Michigan College.

11. In order for Lake Michigan College to continue serving as a vocational-technical center for post-high school youth and adults, the following steps should be taken:

a. Library facilities should be expanded and improved.

b. Currently offered programs and curricula should be re-evaluated and improved with the aid of advisory committees. Offering courses in the southern portion of the county should be given serious consideration. The above suggestions make expanded physical facilities imperative.

c. The counseling services should be expanded to provide more occupational and vocationally oriented counseling.

CHAPTER II

Introduction to the Study

This investigation, sponsored by the Berrien County Intermediate School District, was an in-depth study of the vocational-technical needs of the Berrien County area and the means for meeting these needs. Chapter II gives some background information concerning: (1) Berrien County, (2) sponsor and support, (3) objectives, and (4) the organizational pattern for the study.

Background Information Concerning Berrien County

Berrien County is located in the southwest corner of Michigan and has an area of approximately 612 square miles. It has a wide diversity of occupations ranging through the fields of agriculture, marketing, distribution, and manufacturing.

The Intermediate School District contains 14 public K-12 school districts, and 15 public elementary school districts (Table I). Lake Michigan College--a county community college--is located in Benton Harbor. Andrews University and Andrews Academy are located in Berrien Springs. There are, also, two parochial high schools and sixteen parochial elementary schools in the county.

TABLE I

BERRIEN COUNTY INTERMEDIATE SCHOOL DISTRICTS

* High School Districts

The Berrien County Intermediate School District has a total enrollment of nearly 42,000 students and a state equalized valuation of approximately 533 million dollars. Table II (page 14) shows a detailed breakdown by school district of the state equalized valuation and enrollment for the county. The enrollment in grades 9 to 12 in the public and parochial high schools participating in the study are shown in Table III on page 15. It will be noted that over 12,000 students are enrolled in grades 9 to 12.

The total labor force in the county, as of January 1966, was 59,600 (Table IV). This figure does not include the

Sponsor and Support

The Board of Education of the Berrien County Intermediate School District sponsored this study and gave approval to employ a project director on a half-time basis to give direction to the study.

The need for this investigation was recognized by the Berrien County School Administrators' Organization. This group passed a motion indicating financial support on a

per capita basis and requested that the study be supported by the Intermediate School District. Approval for the investigation was also received from: (1) the Lake Michigan College administration; (2) a committee of Niles-Buchanan industrialists; and (3) the Twin Cities Industrial Management Training Committee. This latter group contributed $1,500.00 to cover some of the costs of the study. In addition, the Study Committee for the Benton Harbor Area on Reorganization went on record as supporting the investigation of the vocational needs in Berrien County so that improved programs to meet the needs on a cooperative basis could be provided. In addition, this investigation has been supported on a 50 percent matching basis by funds supplied by the Michigan Department of Education's Division of Vocational Education.

Objectives of the Study

The major objectives of the study were as follows:

1. To determine the present and future vocational-technical education needs of Berrien County.
2. To determine the levels at which programs should be offered to meet these needs.
3. To determine where these programs should be located; to determine whether they should supplement or supplant presently existing programs.
4. To determine how these programs will be financed.

Organizational Pattern For the Study

The Executive Committee consisting of 8 members was appointed by the Intermediate School District Board of

Education. The Executive Committee, then, approved the appointment of the project director.

The project director immediately gave attention to: (1) general organizational structure of the study; (2) major duties of the six research and advisory committees; and (3) preparing questionnaires and other data gathering instruments. The selection of the research and advisory committee members was made by the executive committee and approval given to the plans outlined by the project director.

A review of Table VI will show the organizational pattern used to conduct the study with the following research and advisory committees consisting of 55 members:

1. Legislation and Finance
2. Business, Industry, Agriculture
3. Public Elementary and Secondary Schools
4. Community College
5. Private and Religious Schools
6. Graduate Survey

Chapters II, III, IV, V, and VI will give the reader a detailed description of the findings and conclusions of each of the above committees.

TABLE VI

Organization Chart

CHAPTER III

Report of Business, Industry, Agricultural Committee

Introduction

A ten-page questionnaire was sent to 1,193 business, industrial, and agricultural firms in the Berrien County Area. Of this number, 345 or approximately 29 percent returned the questionnaire (Table VII). These 345 businesses employ about 17,018 workers which represents 32 percent of the wage and salaried workers in Berrien County.

TABLE VII
Business, Industry, Agriculture
Questionnaire Returns

Kind of Business	Number Sent	Number Returned	Percent Returned
Agriculture	72	31	43.55
Manufacturing - Durable Goods	160	60	37.50
Manufacturing - Non-Durable Goods	67	18	26.85
Non-Manufacturing	894	236	26.39
TOTAL	1,193	345	28.99

It is apparent that these business, industrial, and agricultural firms represent a wide variation of services and activities. In rank order, the services and activities of these 345 firms are as follows:

1. Industrial or manufacturing
2. Retailing
3. Food, dairy, and drink
4. Service establishments
5. Wholesaling
6. Agricultural services
7. Construction
8. Transportation
9. Professional
10. Health, hospital, medical, dental
11. Banking and Finance
12. Entertainment and recreation

Expected Rate of Employment

Employers were asked to predict their expected annual rate of employment during the 1966-1972 period. For persons with a high school diploma, the expected rate of employment for industrial jobs, sales and service jobs, business office jobs, as well as agricultural jobs is definitely expected to increase (Table VIII). It is also apparent that employers are anticipating an increased demand for persons with education beyond high school, but less than four years of college. This is especially true for industrial and technical positions.

TABLE VIII
Expected Annual Rate of Employment
1966-1972

	Increase		Same		Decrease	
	N	%	N	%	N	%
High School Graduate:						
Industrial Jobs	300	53.09	260	46.02	5	.89
Sales and Service Jobs	75	47.16	58	36.48	26	16.36
Business Office Jobs	219	61.52	94	26.40	43	12.08
Agricultural Jobs	15	50.00	8	26.66	7	23.34
Beyond High School - Less Than 4 Years College:						
Industrial and Technical Jobs	114	58.16	82	41.84	0	0.00
Business and Office Jobs	96	36.36	165	62.50	3	1.14
Health, Hospital and Medical Jobs	6	30.00	13	65.00	1	5.00
Agricultural Jobs	0	0.00	8	100%	0	0.00

Supply of Qualified Employees

Many employers indicated a definite scarcity of qualified candidates for currently existing positions. This scarcity is expected to become more acute.

For those positions demanding high school graduation, nearly 65 percent of those employers who gave an expression concerning current supply of candidates for industrial jobs indicated the supply was scarce (Table IX). For the sales and service jobs and office positions, 38 percent of those employers who expressed a feeling indicated a scarcity.

For those positions demanding education beyond high school, the supply of qualified candidates is even more critical. For example, about 86 percent of those employers

who answered the supply question indicated a scarce supply for industrial and technical jobs, and 61 percent for business and office jobs.

The above conclusions are further substantiated by the shortage of qualified applicants in the two Berrien County Michigan Employment Security Offices.

TABLE IX
Supply of Qualified Employees

	Scarce		Adequate		Surplus	
	N	%	N	%	N	%
High School Graduates:						
Industrial Jobs	346	64.68	180	33.64	9	1.68
Sales and Service Jobs	76	37.63	125	61.88	1	.49
Business Office Jobs	146	37.63	235	60.56	7	1.81
Agricultural Jobs	13	33.33	26	66.67	0	0.00
Beyond High School - Less Than 4 Years College:						
Industrial and Technical Jobs	158	85.86	26	14.14	0	0.00
Business and Office Jobs	138	61.06	86	38.05	2	.88
Health, Hospital and Medical Jobs	14	73.68	5	26.32	0	0.00
Agricultural Jobs	4	66.66	2	33.34	0	0.00

Employment of High School Dropouts

Generally, employers indicated they almost never employ a high school dropout (Table X). This is especially true for (1) highly skilled jobs; (2) business office jobs; (3) sales jobs; (4) apprenticeship for highly-skilled trades and crafts; (5) semi-skilled jobs; and (6) service jobs. The majority of the employers indicated a high school dropout was acceptable only as an unskilled laborer.

TABLE X
Employment Operating Practices
for High School Dropouts

Entry Job Category		Frequency of Employment					
		Common Practice		Infrequently		Almost Never	
		N	%	N	%	N	%
1. Highly-skilled jobs	N=80	2		7		71	
2. Business office jobs	N=97	3		10		84	
3. Sales jobs	N=93	6		13		74	
4. Apprenticeship for the highly-skilled trades and crafts	N=81	7		21		53	
5. Semi-skilled jobs (assembly line and production workers; machine operators)	N=79	29		28		22	
6. Service jobs	N=106	29		37		40	
7. Unskilled labor	N=175	116		39		20	
8. TOTAL	N=711	192	27.00	155	21.81	364	51.19

In contrast, a new high school graduate is acceptable and employed as a common practice by employers for: (1) business office jobs; (2) sales jobs; (3) apprenticeship for highly skilled jobs; and (5) service jobs (Table XI). For technician positions and other highly skilled jobs, employers prefer candidates with education beyond high school.

Adequacy of Existing Educational Programs

The 345 reporting employers were very critical of the extent to which existing educational facilities and programs were meeting the occupational and training needs of Berrien County. A tally of the employers expressing opinions concerning the adequacy of (1) trade and industrial; (2) office; (3) agricultural; and (4) retailing, distribution and service educational programs and facilities shows that 66 percent expressed the feeling that the task was being done poorly (Table XII).

The above conclusion was further demonstrated by the general comments expressed at the end of the questionnaire. The following is but an example:

> "We have people inquiring for work quite frequently. Most of them have had no training of any kind. The thing we need is a place where a young man can learn a trade and then be able to go out and apply himself. This person should actually do the work to gain experience and eventually be placed in some form of supervision. Too much emphasis has been placed on higher education and overlooking the fact that it takes more Indians than Chiefs to support an organization."

6. TOTAL	N=658	128	19.46	96	14.58	434	65.96

General Conclusions

The business, industrial, and agricultural firms in Berrien County have given a very positive expression of need for an expanded vocational-technical education program at the high school and post-high school levels. Based upon the current shortage of qualified applicants and upon the increase in demand expected between now and 1972, the need for expansion appears even more urgent. Inherent in the cry for such an expansion is a re-evaluation of the currently existing program for vocational-technical education and its facilities so that the expanded program will be organized on a sound and practical basis.

CHAPTER IV

Report of Public and Religious Schools Committees

Introduction

Two committees--one concerned with the public and elementary school program and the other concerned with the private and religious schools program--were formed at the beginning of the study. At the time of formation of these committees, it was believed that sharp differences of opinion concerning procedure, types of questions to be asked, and conclusions and recommendations would result. However, these differences were not forthcoming and thus this chapter represents the combined conclusions of the two committees.

Basically the committees were concerned with the following:

1. Sending a questionnaire to the parents of 4th, 7th, and 10th grade students in Berrien County.
2. Having the currently enrolled senior class complete a questionnaire.
3. Determining vocational curricular offerings and numbers of students enrolled.
4. Determining existing physical facilities for vocational curricular offerings.

Parent Survey Results

Parent survey forms were distributed to the parents of

boys and girls in the fourth, seventh, and tenth grades attending Berrien County public schools and to those parents whose children attend St. Johns Catholic, St. Joseph Catholic and Andrews Academy. Of the 3,611 questionnaires returned, 3,211 were returned by public school parents and 400 by parochial school parents. The above age groups were chosen in order that the data could be used in short-range as well as long-range curriculum study and revision.

A tabulation of the results on the questionnaire indicate that the parents believe the high schools are doing a fair to a poor job of preparing students to select a vocation (Tables XIII and XIV). They also express the belief that the guidance and counseling program is helpful to students who are in high school. However, the parents surveyed believed that the opportunities for high school students to learn a vocation need to be improved.

It appears that the "sputnik inspired education" is no longer in vogue and that education for vocations has generated a great deal of interest--over seventy percent of the public and parochial school parents responded that additional vocational programs were needed on the 11th and 12th grade levels (Table XV). If quality vocational education programs were made available, about 65 percent of the parents would encourage their children to take advantage of such courses and over 41 percent of the parents would be interested in

TABLE XV

Need for Vocational-Technical Education

Question and Response	Public School Parents		Private and Religious School Parents	
	N	%	N	%
1. Is there a need for additional vocational programs on the 11th & 12th grade levels?				
a. Yes, many	1583	49.30	218	54.00
b. Yes, a few	690	21.49	80	20.00
c. None	91	2.83	5	1.25
d. Don't know	728	22.67	70	17.50
e. Did not answer	119	3.71	27	7.25
2. If a quality vocational program were made available to your children, would you encourage them to avail themselves of this kind of education?				
a. Yes	2110	65.72	262	65.00
b. No	119	3.70	22	5.50
c. Don't know	830	25.84	108	27.00
d. Did not answer	152	4.74	8	2.50
3. Would you be interested in attending evening school to improve your own abilities?				
a. Yes	1443	44.95	165	41.25
b. No	672	20.92	86	21.50
c. Don't know	895	27.87	114	28.50
d. Did not answer	201	6.26	35	8.75
4. What level of vocational preparation do you feel a high school should provide?				
a. Enough to secure a beginning job	1985	61.82	256	64.00
b. Enough to progress on job without further education	858	26.72	88	22.00
c. Other	182	5.66	31	7.50
d. Did not answer	186	5.80	25	6.50

attending evening school to upgrade their own skills and improve their own education.

A further study of Table XV reveals that sixty-two percent of the public school parents surveyed--64 percent of the private and religious school parents--believe that high school vocational education should be such that all high school graduates would be able to secure a beginning job and 27 percent--22 percent for private and religious school--of the parents believe that the high school should provide enough training to allow the graduate to progress on the job without further education.

In the questionnaire, the parents were given an opportunity to give an expression as to the kind of courses they would like to have taught. The following break-down indicates the parents' preferences in rank order for the entire county as well as for geographical areas:

Rank of Course Preference for County		Benton Harbor St. Joe & Lakeshore	Niles Buchanan & Brandywine	Other schools in county
1	Electronics	1	1	1
2	Business Machines	2	2	2
3	Machine Tool	6	5	3
4	Automotive	5	6	4
5	Building Trade	4	7	5
6	Medical Technology	3	4	6
7	Data Processing	9	3	7

8	Appliance Repair	8	8	9
9	Retail and Sales	7	11	10
10	Hospital Aids	10	9	11
11	Welding	12	10	8
12	Home Economics	11	12	12
13	Woodworking	13	13	13
14	Work Attitudes	14	17	14
15	Graphic Arts	15	15	16
16	Food Services	16	16	17
17	Agriculture	17	20	15
18	Health Occupations	18	14	18
19	Cosmetology	19	18	19
20	Tailoring	20	19	20
21	Foundry	21	21	21
22	Other	22	22	22

It will be noted that electronics and business machines were ranked first and second for all geographical areas including the county as a whole. The ten courses or areas for which the parents indicate the greatest need are electronics, business machines, machine tool, automotive, building trades, medical technology, data processing, appliance repair, retail and sales, and classes for hospital aids.

The parents were, also, given an opportunity to give an expression concerning administrative arrangement for vocational-technical education as well as preferences for financing an expanded vocational-technical program on an area

basis. A study of Table XVI reveals that no significant preferences were indicated--nearly as many families would prefer that Lake Michigan College serve as a vocational-technical center for all students as favored expanding existing high school programs or building new vocational-technical centers. However, it should be stressed that the concept involved in building new vocational-technical centers is one with which parents are generally unfamiliar--yet a sizeable percentage of the families favored this idea.

A further breakdown by geographical area concerning this question shows the following data for public school parents:

Question Number	St. Joseph, Benton Harbor, Lakeshore	Niles, Buchanan, Brandywine	Other schools in county
1a	33.00%	38.94%	42.46%
1b	23.33	22.82	20.86
1c	35.52	28.54	25.23
No Response	8.15	9.70	11.45

Regardless of the type and location of the facilities and equipment needed, about 7 out of 10 parents indicated that such should be paid for by means of a county-wide millage (Table XVI - question 2).

About half of the families surveyed had two wage earners. Eighty-five percent of the main wage earners were males. The occupational breakdown for the main wage earner

TABLE XVI

Administrative Arrangement and Financing Preferences

Question and Response	Public School Parents		Private and Religious School Parents	
	N	%	N	%
1. If it is determined that an expanded vocational education program is needed, additional buildings and equipment will probably be needed. In your opinion:				
a. Should existing vocational classrooms and shops in the high schools be expanded?	1207	37.58	123	30.75
b. Should we build new vocational technical centers in Berrien County?	719	22.40	111	27.75
c. Should Lake Michigan College serve as a vocational-technical center for all students?	981	30.55	124	31.00
d. No Response	304	9.47	42	10.50
2. The type of instruction, equipment and buildings needed for vocational-technical training will undoubtedly require additional financing. In your opinion, would this be more easily accomplished by:				
a. County-wide millage	2199	68.49	289	72.25
b. Local school millage	603	18.77	48	12.00
c. No Response	409	12.74	63	15.75

in the public school families is as follows (Table XVII):

Skilled worker	19.12%	Professional	7.75 %
Laborer	15.41	Other	6.22
Self employed	12.76	Office worker	2.89
Semi-skilled worker	11.49	Sales worker	2.89
Management	11.46	Unemployed	1.52

The occupations of wage earners both male and female in the family other than the main wage earner are as follows:

Laborer	10.02%	Self employed	4.58 %
Office worker	8.25	Professional	4.45
Semi-skilled worker	6.44	Sales worker	3.92
Other	5.04	Management	1.96
Skilled worker	4.70	Unemployed	1.43

In summary, overwhelming support seems to be indicated for the expansion of vocational education that is to be financed by a county-wide basis. However, no conclusion can be drawn on the type or location of such facilities and equipment from the parent survey.

Senior Class Survey Results

A total of 2,112 senior students from the 14 public high schools and 151 seniors from the 3 parochial schools responded to the senior class survey (Table XVIII). About 73 percent of the public high school seniors and 64 percent of the parochial school seniors have lived in Berrien County for over ten years.

The seniors were asked to indicate which curriculum best described the one in which they were enrolled. Of

those responding, about 47 percent of the public school seniors and 63 percent of the private and religious school seniors indicated being enrolled in the college preparatory program (Table XIX). Over 35 percent of the public high school seniors are currently enrolled in one of the vocational curricula.

Nationwide, only two out of every ten students enrolled in elementary school will complete a four-year college education. In view of this, it is interesting to note the high percentage of the seniors currently taking a college preparatory program. Sixty-seven percent (89 percent for parochial schools) responding to another question indicated that their future plans "definitely" or "probably" included attending college (Table XX).

The seniors were asked a question concerning their advanced education interests provided opportunities were available in Berrien County. Of those responding to the question (Table XXI), over 38 percent of the public school seniors and 26 percent of the parochial school seniors indicated an interest in advanced technical business, or trade training. An additional 34 percent of the public and 37 percent of the parochial high school seniors, expressed a desire to attend a community college where the work taken could be transferred to a four year college or university.

TABLE XXI

Advanced Education Interests

Question & Response	Public School Seniors		Private & Religious School Seniors	
	N=1980	%	N=151	%
In what types of advanced education would you be interested provided opportunity were available in Berrien County? (Check one)				
1. Advanced technical, business, or trade training	755	38.18	40	26.49
2. First two years of college work which could be transferred to a four year college or University	689	34.76	56	37.08
3. None of the above	373	18.83	34	22.51
4. Other	163	8.23	21	13.92

Furthermore, of the 1,429 public high school seniors indicating their future plans "definitely" or "probably" included attending college, over 38 percent indicated the intention of attending Lake Michigan College. A similar percentage of the private and religious school seniors plan to attend Lake Michigan College. Of the above public school seniors, 9.16 percent expect to attend Michigan State University, 7.48 percent Western Michigan University, 7.13 percent Ferris State College, 23.93 percent expect to

attend other Michigan colleges, while 13.78 percent expect to attend colleges outside of Michigan. Significant percentages of the parochial school seniors are as follows: (1) 7.31 percent plan to attend Michigan State University; (2) 7.92 percent Western Michigan University; (3) 32.92 percent other colleges in Michigan; and (4) 15.30 percent plan to attend other colleges outside of Michigan. About 88 percent of the students responding stated that their parents "wanted", "insisted" and/or "expected" them to attend college after high school graduation.

Based upon the above summarization, it is interesting to note the educational level of the parents of these seniors (Table XXII). It will be noted, for example, that over 40 percent of the public school fathers of seniors have not completed high school.

TABLE XXII

Educational Level of Seniors' Parents

Educational Level	Mother		Father	
	Public School	Private and Religious School	Public School	Private & Religious School
1. Eighth grade or less	15.99	5.22	21.82	7.23
2. Some high school	19.89	12.41	18.42	8.55
3. Graduated from high school	39.40	37.90	28.73	29.60
4. Business or trade school	5.58	5.22	5.54	5.92
5. Some college	7.41	10.45	8.55	16.44
6. Graduated from college	7.51	25.49	10.69	30.92
7. Don't know	4.19	3.31	6.22	1.34

Another statistic would indicate that approximately 80 percent of the public and parochial high school seniors earned a part of their spending money, while attending high school, by working on part-time jobs during the regular school year or during the summer.

The public high school students indicated that in terms of post-graduation plans that their respective high school training was "good" to "fair" and that there was room for improvement (68.04 percent). Twenth-four percent said that their high school preparation was just what they needed.

In response to a question asking the students to indicate the way various school services or facilities had helped them, 63.37 percent stated that the high school had done a "good" job in disseminating information about college--31.19 percent said "fair" and 5.43 percent said "poor". On the other hand, 48.94 percent of the students responding said that the schools did not have someone that the students could confide in about personal problems--17.11 percent said "good" and 33.93 percent said "fair".

Of the students not planning to further their education after high school graduation, 21.84 percent wanted to work and make money, 21.84 percent said that they could not make good enough grades to go on for further education, 17.42 percent believed that further education was too expensive and that they could not afford it, and 15.99 percent wanted

to get married. About 34 percent of the students not planning on post-secondary education said that they would change their plans if they had more money.

Similar--not significantly different--percentages to the above were tabulated from the private and religious school senior questionnaires.

Curriculum and Facilities Survey

An extensive study of the vocational curricular offerings in grades 7 to 12 was made as well as investigating the physical facilities and equipment used for vocational-technical education in Berrien County in the 14 public secondary school districts and in the three parochial secondary schools. The occupational areas included in this study were: (1) agriculture; (2) business and distributive; (3) home economics; (4) trade and industrial; and (5) cooperative occupational education.

The enrollments in the various vocational areas are shown in Table XXIII for the fall semester of the 1965-66 school year. For example, it will be noted that there were 2022 male enrollments in business education classes and there were 4313 female enrollments. It should be noted in the total numbers of students taking courses in such areas as business education or trade and industry that there may be several duplications. This is possible as many students were taking more than one course in a subject area during

TABLE XXIII

Total Enrollment In Vocational Education Areas
Fall 1965

Area	Grades 7-9				Grades 10-12				Total			
	Male		Female		Male		Female		Male		Female	
	N	%	N	%	N	%	N	%	N	%	N	%
Agriculture	94		2		444		3		538	7.28	5	.09
Business Education	151		331		1871		3982		2022	27.37	4313	60.15
Home Economics	28		1307		102		1318		130	1.76	2625	36.61
Trade and Industrial	1846		4		2702		41		4548	61.55	45	.64

TOTAL	120	1442

the semester. For instance, a girl may have been taking Typing I, Bookkeeping, and Office Machines all in one semester. A further breakdown for grades 10 to 12, by school district, is shown in Table XXIV.

A study of Table XXV, showing the estimated dollar value of the physical equipment and facilities in the various high schools in Berrien County, reveals that certain high schools are much better equipped than others. For example, Galien has approximately $1,991 worth of equipment for teaching trade and industrial classes while Brandywine has over $273,000 worth of equipment for this purpose.

In summary, it may be concluded that the course offerings and facilities in the public secondary schools in Berrien County are not identical in all schools. It is admitted that vocational curricula and student aspirations may vary from one school to another according to employment opportunities in that area. However, there are inequities in the educational opportunities when comparing one school district with another.

Chapter V

Report of Graduate Survey Committee

A separate research committee consisting of the guidance personnel from each of the 14 public high schools made a follow-up study of the 1960 and 1964 graduating classes. The private and religious school committee made a similar study using the identical questionnaire. This was an attempt to determine the vocational needs of the county as seen by the high school graduates.

This chapter, therefore, is a discussion of the results and conclusions gained as a result of sending a three-fold post card questionnaire to 3,788 graduates of the 1960 and 1964 classes of the 14 public and 3 parochial high schools in Berrien County. About 1,250 questionnaires were returned or approximately 33 percent. Therefore, the conclusions and recommendations are based upon those returned. (See Table XXVI for a detailed breakdown of percentage of returns by schools)

Two of the questions were concerned with: (1) the major program followed while in school; and (2) the relationship of this major program to the present occupation of the graduate. A study of Table XXVII reveals that 766 of

the 1,250 graduates returning the questionnaire followed a college preparatory program, while 325 followed a vocational curriculum. The graduates were asked to give an opinion concerning the relationship of their present occupation as compared with the major program followed while in high school. A summary of this evaluation is contained in Table XXVIII. It will be noted that 343 of the 1,250 who returned the questionnaire indicated that there was no relationship between the high school program followed and current employment. The majority, however, indicated it served as a general background.

TABLE XXVII

Gave Specific Background	4	7	45	75

Questions concerning present employment and future aspirations in regard to employment are summarized in Tables XXIX and XXX. It may be noted that the future aspirations of the graduates cover a wide range of vocational and technical occupations; however, as usual in a study of this nature, the professional occupations are mentioned most often.

The graduates were also asked to evaluate how much their high school prepared them to: (1) choose a vocation; (2) get a full-time job; (3) prepare for further education; (4) understand their abilities and interests; and (5) know about jobs. Table XXXI shows the data for the public school graduates while Table XXXII displays the identical information for the private and religious schools.

d. Understand your abilities and interests	15	23	30	25	3	10	0	0
e. Know about jobs	1	12	29	29	11	12	8	4

Opinions concerning the vocational courses offered while the graduates were enrolled in school were also revealed. The three basic questions asked were: (1) Do you feel that your high school had a sufficient number of vocational courses?; (2) Would you have taken more vocational-type courses had they been offered?; and (3) If you were a student just entering high school, what type of program would you follow? The response on these three questions is displayed in Table XXXIII. Information gleaned from a study of Table XXXIII reveals: (1) for the non-college bound students--about 40 percent of the 1960 and 1964 classes--there were not a sufficient number of vocational courses offered in their local school districts; (2) about 28 percent and 42 percent of the public and parochial school graduates respectively who returned the survey indicated they would have taken more vocational courses had they been offered; and (3) about 42 percent and 34 percent respectively of the public and parochial school graduates would follow a combination (college bound and work bound) curriculum if just entering high school.

Conclusions

The graduate survey committee concluded there is a need for post-high school vocational-technical education programs within the immediate area. This type of vocational-technical educational program should be in addition to the expansion of the high school level program. The graduate

survey committee went on record as supporting the need for more vocational-technical education facilities in Berrien County.

TABLE XXXIII

Opinions Concerning Vocational Courses Offered

Question	Private & Religious Graduates		Public School Graduates	
	N	%	N	%
1. Do you feel that your high school had a sufficient number of vocational courses?				
a. Yes	13	12.50	470	41.78
b. No	79	75.96	370	32.89
c. Don't know	12	11.54	285	25.33
2. Would you have taken more vocational-type courses had they been offered?

b. No	39	36.79	478	43.69
c. Don't know	23	21.70	307	28.06
3. If you were a student just entering high school, what type of program would you follow:				
a. Academic -college bound	56	52.83	591	52.86
b. Vocational -work bound	6	5.66	111	9.93
c. Combination of both	44	41.51	378	33.81
d. General	0	0.00	38	3.40

CHAPTER VI

Report of Community College Committee

The Community College Committee of the Berrien County Vocational-Technical Education research study decided to accept four major areas of responsibility as follows: (1) to investigate existing programs of educational preparation for the world of work currently being offered at Lake Michigan College; (2) to determine existing facilities for these programs; (3) to investigate the qualifications of current Lake Michigan College faculty members; and (4) to conduct both a student and a graduate survey.

Existing Occupational Programs at Lake Michigan College

Lake Michigan College offers the majority of pre-professional programs in which the students transfer to varied four-year colleges and universities for the completion of their work. These are of two-year duration and of comparable quality and caliber to the colleges and universities to which the students transfer. The varied two-year certificates and/or degree programs which are designated primarily for training the student to enter the world of work include:

1. 1 and 2 year secretarial programs
2. 1 and 2 year general clerical
3. legal secretary

4. medical and dental secretarial
5. electronic data processing
6. drafting and design technology
7. electricity and electronic technology
8. mechanical technology
9. metallurgical technology
10. practical nursing
11. certified medical office assistant
12. apprenticeship training programs

tool maker	machine repairman
die maker	millwright
die sinker	industrial electrician
die repairman	carpenter
pattern maker	plumber
machinist	steamfitter

13. 12 to 15 varied courses under the Industrial Management Training Program

In addition to the above mentioned specific programs, instruction is given in courses which relate to one of these programs and/or other related fields of skills and academia. The enrollment in vocational-technical programs at Lake Michigan College for the fall term 1964 was 846 plus an approximate 300 others that were taking individual courses that could be related to one or other of the above programs.

Existing Facilities at Lake Michigan College

At the present time (1965-66), the facilities utilized by Lake Michigan College include:

Area for instructional purposes	70,500 sq. ft.
Library facilities	3,000 sq. ft.
Administrative Area	2,900 sq. ft.
Student Services	3,800 sq. ft.
Custodial and Maintenance	5,000 sq. ft.
TOTAL	85,200 sq. ft.

The 70,500 square feet area designated for instructional purposes includes classrooms, seminar and lecture rooms, laboratories and technical shops, service rooms and faculty offices. Of the above mentioned facilities, the utilization of space by vocational-technical programs is as follows:

Engineering Technologies: Drafting and Design Electricity and Electronics Mechanical and Metallurgical	24,000 sq. ft.
Practical Nursing	2,304 sq. ft.
Business, secretarial, clerical etc.	2,444 sq. ft.
TOTAL	28,748 sq. ft.

In addition to this space, these programs also use other rooms, laboratories, library, and student services, which would approximate 15,000 sq. ft. All of the above mentioned facilities are leased by Lake Michigan College.

Qualifications of Faculty Members

There are a total of 55 full-time administrators and instructors at Lake Michigan College. There are 52 part-time instructors who teach primarily in the evening programs. This summary is concerned, however, only with the full-time administration and faculty and is shown below.

Position	Bachelors	Masters	Doctorate
Administration	1 B.A., B.M. 1 B.S.	7 M.A. 1 M.Ed. 1 M.S.N. 1 M.S.W.	1 Ed.D. 1 Ph.D.

Instructional Staff	2 B.S.N.	34 M.A. 4 M.S. 1 M.B.A.

Of the above varied degree classifications, each is appropriate to the individual's area of instruction. The bachelor degrees listed are in fields of vocational or technical-vocational education in which the advanced degree is not mandatory. Of the instructional staff, there are 13 that are directly employed in the vocational-technical subject areas.

Hobby interests of the above mentioned staff, for which proficiency is indicated and instruction is possible in areas other than degree classifications, would include:

Music
Golf
Baking
Woodworking
Cooking
Home Decorating
Gardening
Social Work
Arts & Crafts
Swimming
Knitting
Camping
Sewing
Coin Collection
Weaving
Photography
Target Shooting & Ammunition Reloading
Writing
Rock-hound
Dancing
Bridge
Amateur Radio
Ornithology
Metal Working

With the above qualifications of the instructional staff at Lake Michigan College and the expressed interest and proficiency in varied hobbies and outside interests, it seems evident that quality instruction in various skill and hobby courses is a distinct possibility.

Survey of Students Currently Enrolled in Occupational Programs

In this survey, students presently enrolled in occupational programs at Lake Michigan College include 413. This represents an approximate 99 percent return. Of this number, there were 333 male and 80 female students. Of these, the age distribution is: (1) 17-18 years, 101; (2) 19-21 years, 211; (3) 22-25 years, 63; and (4) over 25 years, 32. Of the respondees, 104 are married and 305 are single and two are divorced. The residencies of the students involved in the survey are: (1) Berrien County, 149; (2) Van Buren County, 34; (3) Cass County, 18; (4) St. Joseph County, 5; (5) Allegan County, 4; and (6) 1 each in Kalamazoo County, Valparaiso, Indiana, Elkhart, Indiana, and Peoria, Illinois.

Approximately 306 students indicated that they are presently employed in addition to attending Lake Michigan College. Of these, 140 are in full-time employment and 183 are in a position which is related to their program in which they are enrolled. The programs in which the students are enrolled include:

Business	147	Mechanical Technology	21
Secretarial Science -Two year	23	Electronic Technology	34
Secretarial Science -One year	3	Drafting and Design Technology	33
Medical Secretary	3	Metallurgical Technology	6
Legal Secretary	4	Apprenticeship Training Programs	117

Distributive Education	19	Electronic Data Processing	4
General Clerical -Two year	6	Other (including engineering related, science, education, etc.)	75
Practical Nursing	14		

Ninety students indicated that they had been enrolled in a previous program before entry into their present choice. Of these, 14 programs at Lake Michigan College were indicated, 4 at Ferris Institute, 3 at Michigan State University. Of the students responding, 267 felt that the program in which they are now enrolled was providing an adequate background for their choice of occupation while 135 felt that the program was providing some background. Three indicated that the program was providing no background for their choice of occupation. One hundred seventy-four felt that the program is providing adequate practical and/or manipulative skills while 106 indicate some provision for these skills and 25 felt that no provision is being made for these skills.

To the question, "Is the program in which you are enrolled providing the opportunity for your personal development or progress?", approximately 231 students indicated that it was providing a great deal of opportunity while 158 felt it was providing some and 9 indicated none. Two hundred thirty-two students felt that their present program was providing a great deal of challenge to them and holding

their continued interest while 153 indicated some challenge and 12 indicated none.

Some of the suggestions for improvement of the various programs include categories such as: (1) slight revision of present curriculum, and therefore eliminating unnecessary courses including more pertinent coursework; (2) more individual attention; (3) more qualified instructors that are up-to-date in their field of teaching; (4) more field trips; (5) possible on-the-job training and usage of outside experts in a respective area; (6) instructors being required to have industrial experience; (7) improving the library facilities and reference materials in all programs; (8) provide adequate study areas; (9) acquisition and installation of more equipment relative to instruction; (10) better counselling services; (11) cooperative work-study plan; and (12) more audio-visual materials.

Some of the strengths of the programs now being offered at Lake Michigan College included: (1) a feeling of generally well-qualified instructors; (2) an adequate background for the vocations being pursued; (3) the generally broad range of courses offered; (4) a general personal interest in the student by some instructors; (5) generally good shop-laboratory facilities; (6) opportunity to develop skills; and (7) opportunity for individual attention and study.

The students enrolled in the occupational curricula at Lake Michigan College were asked what influenced them most to enter a particular program of studies. Mentioned most frequently were: (1) personal interest and (2) a business or industrial person. In rank order, other influences were: (1) parents; (2) high school counselors and instructors; (3) a friend in the program; (4) a Lake Michigan College counselor; and (5) educational opportunity near home.

The major curricula or course of studies followed by the Lake Michigan College students completing the questionnaire is displayed in Table XXXIV. Of the courses taken

TABLE XXXIV

Major Curriculum Pursued While in High School

Curriculum	N	%
College Preparatory	194	45.43
Vocational		
Business Education	44	10.31
Shop or Industrial Arts	60	14.05
Agriculture	9	2.11
Homemaking	1	.23
General	119	27.87

in high school, those considered most helpful were: (1) mathematics; (2) English; (3) industrial arts; (4) office education; (5) physics; (6) chemistry; (7) biology; and (8) homemaking. Students also listed the following courses as being least helpful: (1) biology; (2) chemistry; (3) office education; (4) industrial arts; (5) accounting; (6) physics; (7) English; and (8) mathematics. While the majority of the students indicated that the library resource materials at Lake Michigan College were adequate, a significant number (143) indicated they are below standard.

The Lake Michigan College students gave an estimate of the value of the guidance programs in high school and at Lake Michigan College. The evaluation is displayed in Tables XXXV and XXXVI.

TABLE XXXV

Estimate of Value of High School Guidance Program

Area	Great Deal		Some		None	
	N	%	N	%	N	%
1. Helpful in selecting an occupational program	29	7.69	154	40.85	194	51.46
2. Preparing for a full-time job	25	6.66	139	37.07	211	56.27

5. Providing useful information of varied occupations	76	27.94	69	25.37	127	46.69

TABLE XXXVI

Estimate of Value of Lake Michigan College Guidance Program

Area	Great Deal		Some		None	
	N	%	N	%	N	%
1. Helpful in selecting an occupational program	43	12.80	150	44.64	143	42.56
2. Preparing for a full-time job	75	21.87	139	40.52	129	37.61
3. Preparing for future education &/or training	115	34.33	145	43.28	75	22.39
4. Understanding abilities and interests	89	26.26	155	45.72	95	28.02
5. Providing useful information on varied occupations	70	20.83	162	48.22	104	30.95

Over 330 students indicated that their primary choice of occupational program is now being offered at Lake Michigan College. Other programs indicated as a primary choice included:

Industrial Supervision Technology	9
Apparel Trades	7
Restaurant Management	4
Automotive Technology	3
Automotive Body and Fender	2
Building Trades	2
Cosmetology	2
Radio and Television	6
Automotive Repair	5
Photography	5
Agriculture	1
Aircraft Technology	1
Commercial Art	1
Culinary Arts	1
Diesel Engine Technology	1

Electrical Trades	2	Metal trades	1
Medical Technology	2	Associate Degree in Nursing	1
X-ray Technology	2	Printing	1

Other programs not listed in the questionnaire for which there appeared to be interest included supermarket management, computer science, welding, real estate, insurance, sales, conservation, and production management. Approximately 209 students indicated that they are planning to continue their program at a four-year college or university. These colleges and universities were nation-wide with no definite pattern in terms of any one institution.

There were 79 students who indicated that they wished to enter employment after the completion of their present program. Job choices included various trades, maintenance, sales work, receptionist work, bookkeeping, retailing, electronics, industrial management, entrepreneurship, real estate, hotel-restaurant management, fashion buying, and data processing. Future occupational goals were indicated as laboratory technician, retail store operators, real estate, florists, certified public accountants, resort lodge manager, sales, industrial engineering, law, data processing, trades, supervision, marketing, court reporter, airline stewardess, marriage, secretary, actress, and teacher.

Graduate Follow-up

A survey was made of 32 students graduated from Lake Michigan College in 1965 in vocational-technical programs. There were 15 respondees of which 13 were male and 2 female. There are 11 in the 19-21 year age bracket, 3 in the 22-25, and 1 in the over 25 year bracket. Of these, three are married and 12 are single.

Of the respondents, 9 are presently employed and 6 are unemployed. Seven of these are employed in an activity which is related to the instruction received in a specific program at Lake Michigan College. Some of the job titles are field service, engineer, draftsman, service representative, design, banking, electronic laboratory technician, and assistant traffic manager. Of these, 8 are full-time employment and 1 is part-time. Also, 10 of the respondents indicate that they had been employed while attending Lake Michigan College. The programs in which the graduates were enrolled while attending Lake Michigan College were:

Business	7
Mechanical Technology	3
Electronic Technology	2
Drafting and Design Technology	3

Nine respondents felt that the program in which they were enrolled provided a great deal of background for their choice of occupation while 6 indicated some background. Twelve felt that the program provided a great deal of practical and/or manipulative skills while 2 indicated some and

one none. Twelve indicated that the program provided a great deal of opportunity for their personal development while 3 indicated only some. It was felt by 11 persons that the program provided sufficient challenge to them while 4 indicated only some challenge. Generally, the suggestions for improvements of the programs at Lake Michigan College were an evaluation of each program, discontinuance of some minor courses, enlargement of other areas, and more electives. An indication of some of the strengths of the programs at Lake Michigan College included report writing, personal instruction, enthusiasm, and comprehensive course involvement.

Personal interest appeared to be the most important influence in the selection of a program for 13 students. Parents, counselors in high school, counselors at Lake Michigan College, and business or industrial persons were each indicated once.

College preparatory was the major course in high school for 13 of the graduates prior to entering Lake Michigan College. Mathematics was indicated to be the most important high school course which prepared the students for the program pursued at Lake Michigan College. There are 11 indications of this importance while physics, chemistry, and English (4) were indicated as the second most important subject in high school. Office education and industrial

arts courses each were checked 3 times. The high school course which was considered to be of least importance to progress in respective programs at Lake Michigan College was Biology (6), industrial arts was the next course to be considered of least importance while accounting, chemistry, physics, and mathematics all received a vote of 1.

The following programs were considered to be important and should be offered at Lake Michigan College:

Dental Assistant Technology	6
Industrial Supervision Technology	6
X-ray Technology	6
Aircraft Technology	5
Automotive Technology	5
Commercial Art	5
Electrical Trades	5
Hotel and Motel Management	5
Nursing Program, Associate Degree	5
Refrigeration & Air Conditioning Technology	5
Building Trades	4
Diesel Engine Technology	4
Medical Technology	4
Radio & Television	3
Agricultural -Horticultural Technology	2
Apparel Trades	2
Automotive Repair	2
Cosmetology	2
Library Assistant Program	2
Printing & Lithography	2
Radio & Television Repair	2
Restaurant Management	2
Appliance Service Technology	1
Automotive Body and Fender	1
Metal Trades	1
Photography	1

Ten respondents indicated that they are now continuing

or planning to continue their education at a four-year college or university.

The future occupational goals of the respondents include: (1) Certified Public Accountant; (2) Welder; (3) Design Draftsman; (4) Professional Engineer; (5) Accountant; (6) Nursing; (7) Teacher; (8) Traffic Manager; and (9) Sales work.

The graduate follow-up also was concerned with an evaluation of the high school and community college guidance services. A tabulation of these results is shown in Tables XXXVII and XXXVIII.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

The occupational programs presently being offered at Lake Michigan College are providing an adequate background of training for those students enrolled in them. There is a need to emphasize the manipulative skills and to improve the practical and applied aspects included in these programs.

The faculty at Lake Michigan College is generally well-qualified. There is generally a broad range of courses offered in these programs and the shop-laboratory facilities are adequate. The student-faculty relationship is good and there is opportunity for individual attention and assistance.

Since three-fourths of the sample were included in the 17 to 21 year age bracket, it can be concluded that the emphasis on occupational training is focused on the three to four year period shortly after graduation from high school.

Apparently, the usual factors (i.e. parents, high school, friends, etc.) were not indicated as the prime influence on the choice of the occupational course made by the participants. Since mathematics, English, and industrial courses were ranked highest over all high school courses taken and of most value in the college program, it could be concluded that the social studies and humanities courses and other college preparatory courses on the high school level, are of less significance to the success of students enrolled in occupational courses. However, almost half of the sample indicated that they had pursued a college preparatory program while in high school. Since half of the students indicated the intention of completing a four-year college program, it may be assumed that success in the occupational programs raises the aspiration level of the students.

Generally, the counseling services offered in the high school and the college were rated poorly. However, it appears that the testing program offered in the high school and at Lake Michigan College did assist students in developing a more realistic understanding of their abilities and interests. The survey also indicated that there was a need

for improving the resource materials available in the Lake Michigan College Library.

Of the students included in the sample, over half were enrolled in a business program. Three-fourths were employed in a part-time or full-time position relating to their program. Most of the students indicated that they were experiencing a challenge and maintaining an interest in their choice of programs. Most of them felt that there was adequate opportunity for personal development.

It can be concluded from the survey that more adequate study areas and additional equipment will be needed to provide a well balanced program. Academic and personal counseling services need to be up-graded and expanded, and a cooperative work-study program is needed. More audio-visual materials and library reference materials are also needed. A more comprehensive program for the future will have to include industrial and service management training, automotive technologies, and other areas appropriate to the specific individual needs of the county.

Specific Recommendations

On the basis of this summary, it is the opinion of the Community College Committee that the following recommendations be given serious consideration in terms of the long range planning of vocational-technical education at the post-high school level:

1. Library facilities be expanded and improved.

2. Specific programs and curricula be re-evaluated and improved.

3. The counseling services be better co-ordinated between the high schools and the college to provide improved articulation and continuity between the two levels of vocational education.

4. Lake Michigan College enlarge the counseling staff and provide more occupational and vocationally oriented counseling services including testing.

5. Expansion of existing occupational programs to include:
   a. paramedical
   b. automotive technology
   c. industrial and service management
   d. apparel trades
   e. communications

6. That Lake Michigan College greatly enlarge its facilities for the occupational programs.

7. Enlarge curricula to include more "leisure time" type courses, with increased use of the present personnel combined with others available in the area.

8. An advisory committee be established to:
   a. conduct a feasibility study of new vocational-technical programs,
   b. evaluate the established curriculum and programs in terms of present and future needs and requirements, and,
   c. make recommendations and improvements in the occupational programs offered at Lake Michigan College for post-high school students.

CHAPTER VII

Report of Legislation and Finance Committee

The Legislation and Finance Committee concerned itself primarily with investigating the state and federal legislation pertaining to vocational education including the means for financing vocational education. In addition, the Legislation and Finance Committee prepared a questionnaire which was sent to all of the superintendents, principals, and teachers of vocational subjects in Berrien County. The report of the Legislation and Finance Committee then, as discussed in this chapter, has two parts: (1) results on the questionnaire sent to the superintendents, principals, and vocational teachers; and (2) an implementation report.

Superintendents, Principals, and Vocational Teachers Questionnaire Results

The questionnaire was sent to 202 superintendents, principals, and vocational teachers in Berrien County. Of those sent out, 136 or 67 percent were returned. The returns by groups were as follows: (1) superintendents, 78 percent; (2) principals, 90 percent; and (3) vocational teachers, 60 percent.

Six basic questions were asked in the questionnaire. They were concerned with: (1) administrative arrangements for an expanded vocational-technical program; (2) distance to transport students; (3) types of students that should be enrolled in an area vocational-technical program; (4) relationship which high school students should have with area vocational-technical centers; (5) legislative provisions which the respondents felt should be considered; and (6) where each of the broad occupational areas should be offered.

Tables XXXIX to XLIV show a detailed breakdown for each of the above questions. It will be noted that the responses have been tabulated for the total number of respondents as well as for each of the three groups.

Generally, the following conclusions can be made:

1. The respondents would favor two or more local school districts cooperatively operating area vocational-technical programs; the intermediate school district operating such programs; and/or the community college assuming this function for post-high school youth and adults (Table XXXIX).

2. The majority of the superintendents would be willing to have students transported 11 to 20 miles to participate in a vocational-technical program (Table XL).

TABLE XXXIX
Administrative Arrangements

Question 1: If it is determined that area vocational education programs should be operated, please indicate which of the following administrative arrangements you would favor:

Administrative Arrangements	Would Favor								Would Not Favor								No Opinion							
	Supt N=21		Prin N=28		Voc Teach N=87		Total N=136		Supt N=21		Prin N=28		Voc Teach N=87		Total N=136		Supt N=21		Prin N=28		Voc Teach N=87		Total N=136

3. The following groups should be enrolled in area vocational-technical programs: (1) youth who have dropped out of school; (2) high school youth who plan to seek employment immediately after graduation from high school; (3) high school youth who plan to secure additional occupational training after graduation from high school; (4) post-high school youth and adults who are preparing to enter the labor market and are full-time students; and (5) youth and adults unemployed or working who need training or retraining to achieve employment stability (Table XLI).

4. Generally, the respondents supported the idea that a student enrolled in a vocational-technical program on an area basis should retain his identity with his home high school (Table XLII).

Implementation Report

After reviewing the data compiled by the various research subcommittees and upon considering the Resolutions and Recommendations passed on April 21, 1966, made by the executive committee, and the chairmen and coordinators of each of the six research subcommittees, the Legislation and Finance Committee studied implementation procedures that might be used to carry out these resolutions and recommendations. The following is a summary of the findings of this committee:

1. The Vocational Education Act of 1963 (P.L. 88-210) attacks basic problems affecting Vocational Education. The

Act is comprehensive in scope and includes all persons and all occupations except those generally considered professional or as requiring a Baccalaureate or higher degree. It is concerned with occupational preparation for workers of all ages and at all levels for all fields. It makes provision for meeting the needs of persons in sparsely settled as well as urban areas. Among its provisions, the 1963 Act provides funds for the construction of area schools.

Funds can be used to construct new buildings; to expand, remodel or alter old buildings; to grade and improve sites; and to pay architect's fees. Initial equipment is considered part of construction costs.

The Act provides that at least 33-1/3 percent of the funds appropriated must be spent for vocational education at the post-high school level or for construction of area schools up through fiscal 1968 and at least 25 percent of such funds thereafter.

However, the above provisions should be considered permissive in nature. Due to the fact that sufficient funds are never available to carry out all provisions of the Vocational Education Act of 1963, the Michigan Department of Education must distribute the funds on a priority basis--which may or may not include construction of area vocational-technical centers.

Therefore, for all practical purposes, funds for construction of area vocational-technical centers should be provided through local sources or through special provisions of: (1) the Manpower Development Training Act; (2) Economic Opportunity Act; and (3) Elementary and Secondary Education Act of 1965. (These funds would only be available for special programs which qualify under each act.) Funds may also be available from local, state, and federal philanthropic foundations.

2. Lake Michigan College is already a designated area vocational-technical education center as are all community colleges in Michigan. Several programs of a vocational-technical nature are currently being conducted. As noted in the Community College Committee report, a review and expansion is being recommended.

Such an expansion could be financed in several ways as follows: (1) current revenue sources of the Community College; (2) the Vocational Education Act of 1963 and other federal acts; (3) an increased intermediate school district millage; (4) other pending federal and state legislation to provide funds for community colleges.

3. The two high school vocational-technical centers as recommended in this report--one in the southern portion of the county and one in the northern portion--should also be supported by a voted intermediate school district millage.

Additional funds for operation and equipment--including teachers' salaries--can be obtained from the: (1) Vocational Education Act of 1963; (2) Manpower Development Training Act; and (3) Economic Opportunity Act of 1965. One mill would produce approximately $530,000 per year while two mills would render about $1,060,000 per year.

A new piece of legislation (H 3432) passed by the Michigan House of Representatives and now in the Senate would permit bonding for construction of area vocational-technical centers.

4. The Michigan Department of Education recommends that an area vocational-technical center should offer a minimum of 15 to 20 different occupational preparation programs. It also suggests that a typical center would cost $1,000,000 to $2,000,000 to build. The above recommendations should be considered as guidelines for the advisory committee which will be responsible for implementing the recommendations contained in this study.

5. Provision has already been made for the Intermediate School District to employ a vocational-technical consultant. This should be done as soon as possible. The immediate primary function of the vocational-technical consultant should be to implement the recommendations of this report with the aid and guidance of a representative advisory committee appointed by the Intermediate School District Board of Education.

*PROGRAM DESCRIPTIONS; BIBLIOGRAPHIES; *INSTRUMENTATION; INSERVICE TEACHER EDUCATION; *SUMMER INSTITUTES; *TRADE AND INDUSTRIAL TEACHERS

The institute-type seminar on industrial instrumentation practice and theory was designed for teachers at the high school and post-high school levels. The purpose of the institute was to provide current information and applications of industrial instrumentation. Basic instrumentation principles were interwoven with recent developments and new innovations through the presentations of 11 guest instructors from industry. These presentations were correlated with laboratory demonstrations and experiments. The participants included 16 teachers of instrumentation, electronics, and related subjects. The institute course outline, evaluation opinionnaires, and an instrumentation bibliography of 30 items dating from 1944 to 1965 are given. (HC)

ACKNOWLEDGMENTS

Grateful appreciation is expressed to all who assisted in making the Institute in instrumentation a success.

A special "thank you" is expressed to:

Dr. John J. O'Neill, Dean of the Graduate School of Education, for his interest.

Dr. Robert Worthington, Assistant Commissioner of Education, State of New Jersey for his interest and financial support.

Mr. Nicholas F. Frigiola, Director, Technical Education, State of New Jersey for his assistance in planning and cooperation in implementing the program.

Dr. C. Thomas Olivo, New York State Department of Education, for his assistance in promoting inter-state participation.

Dr. Gordon G. McMahon, Director, Division of Vocational-Technical Education, State University College, Oswego, New York, for his assistance in planning and developing the structure of this institute.

Mr. Donald B. Barbieri, Director of Vocational Education, Valhalla, New York for his aid in curriculum development during the Institute.

Dr. Elmer C. Easton, Dean of the College of Engineering, for making available the facilities of the College of Engineering for the Institute.

Professors A. J. Del Mastro and Richard H. Schwartz for cooperation in making available the hydraulics laboratory.

Dr. Richard Plano, Professor of Physics, and Mr. Donald King of the Information Processing Center for helpful demonstrations and explanations of the computer.

The manufacturing firms that provided displays, and the representatives who serviced them:

The Foxboro Company
Mr. W. H. Furry

Honeywell, Incorporated
Mr. Gorlyn H. Bronstad

Moore Products Company
Mr. Henry R. Koenig

Leeds and Northrup Company
Mr. R. R. Hartman

The industrial firms that made possible the field study visitations:

United States Steel Co.
Fairless Hills Plant
Mr. William K. Peck

Leeds and Northrup Co.
Mr. G. Lupton Broomell and
Mr. Joseph E. Casey

Sun Oil Company
Marcus Hook Plant
Mr. Eric Weiss and
Mr. Peter Jordan

The guest instructors who gave much time and effort to the program:

Emil J. Minnar	Robert Mayer	J. W. Murdock	M. D. Weiss
G. M. Crabtree	S. D. Prensky	Frank M. Ryan	H. N. Helms
Emitt H. Sommer	E. A. Weiss	Joseph E. Casey	

Dr. Carl J. Schaefer, Chairman of the Vocational-Technical Education Department, for constant interest and assistance in this endeavor.

Dr. Larson and the participants listening to Mr. D. S. Luppold, Leeds and Northrup Co., explaining their industrial instrumentation program. Reading from left to right, front row, are: Allan Borghard, Myron Read, and Edward J. Egle, Jr. Second row: Richard M. Kay, Emory P. Berman, George J. Jarrow, Anthony Dienno, and Edward L. Drovon. Third row: Dr. Milton E. Larson, Edmund F. Trifari, Herbert Mau, John E. Green, and William Jiskra, Jr. Fourth row: Hubert Braun, Otto C. Holzer, Fred Brechlin, and Murray Berkovits.

EDUCATIONAL PROGRAM

The educational program consisted of four specific approaches to strengthening the participating teachers in the field of instrumentation. Specifically, the purpose of the Institute was to provide current information, coupled with applications of industrial instrumentation.

Basic principals were interwoven with recent developments and new innovations through the presentations of several guest instructors from industry reflecting specialized phases of industrial instrumentation (See Faculty and Support Personnel).

The presentations of guest instructors were correlated with laboratory demonstrations and experiments. During the afternoon laboratory activities, each participant had opportunities to "try out" for himself modern instrumentation test equipment, and other pneumatic, hydraulic, and electronic instrumentation equipment.

A part of the Institute was devoted to preparation of instructional materials significant to the participant. Each worked in a selected area of interest, seeking the assistance of an available specialist in curriculum construction when needed. In several cases curriculum materials were developed specifically for use during the regular teaching activities of the participant. Curricula for instrumentation, course outlines, information sheets, and laboratory-experiment sheets were developed. The copy prepared by each individual was duplicated and

compiled into a volume of resource materials which was distributed to each of the participants.

The field study visitations were planned to enhance the presentations of the guest instructors and enlarge upon the laboratory experiences. Presentations prior to and question-and-answer sessions following the guided field studies made these effective educational activities. The coordinated and planned efforts of the following industrial firms made these activities meaningful educational experiences:

United States Steel Company -- Fairless Hills Plant

Leeds and Northrup Company -- Industrial School and North Wales Plant

Sun Oil Company -- Marcus Hook Plant.

COURSE OUTLINE

288:463 RECENT DEVELOPMENTS IN TECHNICAL EDUCATION -- INSTRUMENTATION (Cr. 3) (G3)

SUMMER INSTITUTE

CATALOG DESCRIPTION: An institute-type seminar designed for teachers of technical courses at the post high school and high school level. Emphasis is placed on industrial instrumentation practice and theory involving such topics as temperature, flow, pressure, level, liquid analysis, gas analysis, electronics measuring instruments, automatic control systems, and the computer. Subject matter concepts and technical skill will be developed through presentations, discussions, laboratory experiences, field study and curriculum development experiences.

OBJECTIVE OF COURSE: To provide current information coupled with applications, to upgrade in-service teachers in the concepts of industrial instrumentation.

COURSE OUTLINE:

I. Introduction to Instrumentation

II. Temperature instrumentation
   A. Thermocouples
   B. Filled thermal systems
   C. Resistance types
   D. Readout devices

III. Flow instrumentation types
   A. Orifice -- venturi-pitot nozzle type
   B. Readout devices

IV. Liquid analysis type instrumentation
   A. Ph devices
   B. Electrolytic conductivity measurements
   C. Oxidation/reduction fundamentals
   D. Titrations
   E. Readout devices

V. Gas analysis applications
   A. Differential thermal types
   B. Magnetic applications
   C. Chromotography
   D. Density
   E. Readout devices

VI. Pressure devices
- A. Manometers
- B. Deadweight testers
- C. Diaphragm, bellows, bourdon type
- D. Readout devices

VII. Level as employed in Instrumentation
- A. Float
- B. Pressure
- C. Bubble
- D. Diaphragm
- E. Differential pressure
- F. Readout devices

VIII. Industrial electronics as applied to Measuring Instruments

IX. Automatic Controls

X. Introduction to Computers

XI. Summary and Evaluation

TEXTBOOK: None

FACULTY AND SUPPORT PERSONNEL

The Institute was a function of the Department of Vocational-Technical Education, Rutgers - The State University under the immediate direction of Dr. Milton E. Larson, Adviser in Technical Education.

Financial support for the Institute was provided by Rutgers - The State University and the Division of Vocational Education, State Department of Education of New Jersey.

The program was cooperatively planned by a committee consisting of: Mr. Nicholas F. Frigiola, Director, Technical Education, State of New Jersey; Dr. Gordon G. McMahon, Director, Division of Vocational-Technical Education, State University College, Oswego, New York; Mr. Donald B. Barbieri, Director of Vocational Education, Valhalla, New York; Mr. Joseph E. Casey, Director of Educational Programs, Leeds and Northrup Company, Philadelphia, Pennsylvania; and Dr. Milton E. Larson, Adviser, Technical Education, Rutgers - The State University.

The following individuals participated as guest instructors:

NAME	POSITION	ADDRESS
Emil J. Minnar	ISA Journal	622 Kelso Road, Philadelphia, Pa.
Robert Mayer	Chief of Operations, Physics Section Research Center	Sun Oil Company Newton Square, Pa.
J. W. Murdock	Head, Applied Physics Division	Naval Boiler & Turbine Laboratory Philadelphia, Pa.
M. D. Weiss	Manager, Analysis Instrumentation Group	U. S. Rubber Co. Naugatuck, Conn.

SOME OF THE STUDENT LABORATORY ACTIVITIES

EVALUATION

Summary of Student Opinionnaire

A brief questionnaire was given to the students on July 22, 1966. The questions with the tabulated responses follow:

	YES	NO	UNCERTAIN
1. Would you be interested in attending another summer institute next year?	13	1	2
2. Do you favor laboratory sessions?	16	0	0
3. Do you favor Field Study visitations?	16	0	0
4. Do you believe guest instructors from industry are helpful in such an institute?	16	0	0
5. Will you be teaching a course in instrumentation next year?	6	3	7
6. Will you be using instrumentation information in your work next year in some capacity?	16	0	0
7. Do you think this Institute was a success?	16	0	0

*8. If you were to attend another institute would you favor a 1, 2, 3, 4, 5, or 6 week institute?

NUMBER OF WEEKS FAVORED					
1	2	3	4	5	6
0	0	8	4	1	6

*9. What month of the year is most desirable for summer institutes?

MONTH FAVORED		
June	July	August
2	16	2

10. Do you favor a full-day or a half-day institute?

LENGTH OF SESSION FAVORED	
Full-day	Half-day
15	1

*Some students checked more than one response for items 8 and 9.

A Survey of Vocational, Technical, and Adult Education Needs in Monroe County.

Monroe County Intermediate School District, Mich.
Michigan State Dept. of Public Instruction, Lansing. Div. of Vocational Education
Monroe County Community Coll., Mich.
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jul66 121p.

*VOCATIONAL EDUCATION; SCHOOL SURVEYS; GRADUATE SURVEYS; OCCUPATIONAL SURVEYS; *SURVEYS; QUESTIONNAIRES; *EDUCATIONAL NEEDS; EMPLOYER ATTITUDES; STUDENT ATTITUDES; PARENT ATTITUDES; HIGH SCHOOL STUDENTS; HIGH SCHOOL GRADUATES; PROGRAM ATTITUDES
MONROE COUNTY; MICHIGAN

The area surveyed was served by 13 independent school districts and contained 45 elementary schools, seven junior high schools, and nine high schools. Total parochial and public school enrollment for 1965 was 32,153. Total county population was 110,000. Responses to surveys by questionnaires and personal interviews came from 1,489 businesses and industries, 79 of the largest commercial farms, 1,507 high school seniors, 76 percent of 2,324 parents of eighth graders and 829 of the 1965 high school graduates. Educational offerings in industrial arts, business education, home economics, agriculture, and trade and industrial education in the area were surveyed. Conclusions were: (1) Of all jobs less than top management positions, 86.6 percent require no more than a high school education for entry employment, (2) 75 percent of the high school seniors are not being prepared adequately for what they plan to do after graduation, (3) In addition to the 85 vocational class periods now offered, 214 more are needed to meet the needs of high school youth. It was recommended that an area vocational education center or centers be constructed, equipped, and staffed in Monroe County. (PS)

PREFACE

To help prepare employment-bound youth for the technological change of tomorrow is one of the challenges faced by our local schools. To help meet this challenge the Monroe County Intermediate School District Board of Education and the constituent school districts have taken a step toward insuring a labor market of well-prepared, highly skilled workers by authorizing a comprehensive study of vocational technical and adult education needs for Monroe County. This survey is a study of the vocational-technical and adult education needs of Monroe County. Data has been received from agriculture, business, industry, students, parents, graduates, and school officials.

The Monroe County Intermediate School District wishes to thank all the business and industries, school organizations, students, parents, graduates, and farm operators who provided us with the necessary information to make this study a success. We wish to thank all the various research departments that have provided us with a number of source materials for review. It would be impractical to list every study and survey from which ideas have been used. We hope that similarities will be considered as further validation of the basic research involved.

Those who should be recognized for valuable assistance are each member of the Policy Committee, Advisory Committee, and the industry, firm or agency that they represent. We wish to express our appreciation to the administrators, teachers, and directors of vocational education in Monroe County, and private schools in Monroe who have provided us with information and have been most cooperative in all phases of the study. Special appreciation should be extended to the agricultural teachers, business and industrial teachers, and counselors who worked as personal interviewers in contacting the farms, business, and industry. Special appreciation is also extended to Harry Firestone, Robert Kollin, Harry Nelson, Charles Scheltema, Harold Sodt, Zane Stein, and Joseph Sterling, members of the Executive Committee, and to the members of the Advisory Committee for the time, energy, and wisdom which they have so unselfishly given in the preparation of this study.

FOREWORD

It is apparent that a meaningful program of vocational education geared to the needs of the students in employing businesses and industries must be provided if our presence is to be made known in the community. This program must give the students a depth of knowledge and skills beyond that which is offered today. These skills and knowledge are unobtainable in many cases for the working man and students at a level above high school because of economic reasons and mental ability. It is the high schools' responsibility to provide this opportunity. Our employing businesses and industries are in need of people who can do and think.

Our businesses and industries are desperately in need of trained workers. Yet, our youth are being subjected to an increased amount of regimentation of curriculum, social status, and professional image that is, for the most part, incompatible with the needs and desires of the students.

"Our students are expected to take a watered-down version of the college preparatory curriculum sometimes called general education which in no way prepares the students for available jobs."[1]

"Educational programs cannot remain static, they must be flexible, and they must be constantly reviewed. In this sense the curriculum is experimental and should always be so."[2]

Because of the American philosophy, that all have a right to equal education and training according to individual needs and limitations, we must be ever alert to requirements and electives that are available in our school. If all students are to be well-served, the curriculum must be both flexible and diversified.

The problem facing the American public high schools today is how to provide the high level education needed to train their students and youth for employment.

The President's panel of consultants reported that "vocational education must be made available to all people who have the need, the desire, and the ability to benefit from such instruction."[3] To achieve this objective, Monroe County Intermediate School District Board of Education established the Office of Vocational Consultant on July 15, 1965, upon the request of the local school districts to provide consultant services in the areas of business, distributive, home economics, industrial arts, trade and industry, health, agriculture, and vocational guidance. The board employed the services of Mr. Alva Mallory, and on July 15, the proposal for an area study of vocational-technical needs was made and the Intermediate District gained the support of all secondary districts in the county as well as the community college and the two secondary parochial schools in Monroe. The State Office of Vocational Education, Department of Education gave their financial support of matching funds for this study on August 16, 1965. At this time the Policy Committee was activated and the Executive and Advisory Committees were appointed. It was also decided at this meeting that the efforts of this study be confined to the Monroe County Intermediate School District. However, data would be used from state and national sources in formulating final recommendations.

OBJECTIVES OF THE STUDY

1. To identify and evaluate programs now offered in vocational education in the county.

2. To identify what needs to be done in vocational education.

3. To evaluate pertinent data and make recommendations to help the local boards of education formulate plans for better vocational-technical and adult programs in our schools and community.

4. The ultimate objective of this study is to promote the establishment of vocational-technical programs at the high school level that can be justified on the basis of need, cost and student interest.

SURVEY TECHNIQUES USED

No single survey technique appears to be best for determining the vocational-technical and adult education needs of a community. Certain practices and methods of conducting a survey of this nature have been tried and found to be successful. The following methods were used in this study:

1. A study by questionnaire of industrial firms and businesses engaged in all types of operations in this community.

2. Personal interviews with farm operators, industrial, business, and labor representatives.

3. A study by questionnaire of students to determine needs and desires for vocational and/or technical programs.

4. A study by questionnaire of parents to validate the survey of students.

5. A study by questionnaire of high school graduates to gather information and opinions about long-range plans for vocational education and training.

6. Personal interviews with school administrators, guidance personnel, and teachers at various levels of education.

7. A review of school, industrial, and U.S. government publications, brochures, and catalogs which pertained to the education of vocational and technical workers.

8. A survey of vocational and technical education courses offered in the Monroe County area including all secondary schools and the community college.

9. A survey of industrial training programs conducted by the industries surveyed.

10. Techniques of state and community groups, associations, and agencies which have worked on similar or related studies were coordinated and reviewed.

11. Visitations to cities with nationally recognized successful vocational education programs currently in operation.

12. Attendance at state-wide meetings and university conferences which discussed the organization, administration, and finance of vocational-technical and adult education programs.

13. A review of studies and reports by the United States Department of Labor and by the Michigan Employment Security Commission concerning present and projected manpower needs and availabilities.

DEFINITIONS

In order that we might establish a common base of understanding for Monroe County educators, businessmen, industrialists, and labor leaders, the following definitions have been adopted for interpretation of results of the survey study:

VOCATIONAL EDUCATION - the specialized phase of the educational program which prepares individuals with occupational competencies and skills for the world of work. Through vocational education, individuals have the opportunity to develop skills, abilities, understandings, attitudes, work habits, and appreciations, including knowledges and information needed by workers to enter and make progress and employment on a useful and productive basis.

TECHNICAL EDUCATION - preparation for employment in an occupation which requires mastery of a large amount of technical information including the sciences, technology, mathematics and drafting as applied to modern design, production, and service. Normally, one could say that vocational education should be taught on the high school level and technical education on the community college level. However, we should recognize the fact that many adults are in need of upgrading and training after they leave their normal education, therefore, keeping the necessity of vocational education to be taught on the post-high school level.

POLICY COMMITTEE - The Policy Committee is composed of the superintendents of all superintendent school districts and the Monroe County Intermediate Superintendent. Major responsibilities of the committee included:

1. To approve the design of the study.

2. To establish policy when needed.

3. To implement the recommendations of this study.

ADVISORY COMMITTEE - the Advisory Committee was composed of representatives from management, labor, agriculture, business, Chamber of Commerce, parents, related governmental agencies, and minority groups were appointed by the superintendents of schools of Monroe County. Major purposes of the committee included:

1. To help identify some areas of emphasis which should be considered in the framework of this study.

2. To help evaluate what is currently being done in Monroe County.

3. To act as a "sounding board" for conclusions and recommendations of this study.

SUBCOMMITTEES

Members of the Advisory Committee were assigned to five subcommittees which included:

Committee No. 1

Manpower Needs

PURPOSE: To survey all businesses, industries, service, and agriculture

occupations. To find existing and projected employment needs and attitudes concerning present and proposed vocational-technical education programs.

Committee No. 2

Existing and Proposed Programs

PURPOSE: To survey all existing programs and facilities for vocational-technical education for high school and post high school. To recommend and report on means of upgrading, expanding, coordinating, and providing guidance and placement services for these in any new programs.

Committee No. 3

The Student, Parent, and Graduate

PURPOSE: To survey and report on opinions and attitudes of parents whose children are now in school about long-range plans for education and training. To report on feelings, attitudes and opinions of high school graduates and high school seniors as to their needs for vocational-technical training and adequacy of present programs.

Committee No. 4

Financing and Administration of Programs

PURPOSE: To report on methods of financing, organizing, and administering programs in vocational-technical education.

Committee No. 5

Population-Publicizing

PURPOSE: Prepare projected school enrollments, report on population trends and characteristics significant to employment opportunities. Publicize the survey activities and publication of all final survey reports.

This report will provide the foundation for the other survey reports and a large measure of the justification for the total survey recommendations.

EXECUTIVE COMMITTEE

The chief responsibilities of the Executive Committee included:

1. To review the plan of organization for the conduct of the study.

2. To guide the general direction of the study.

3. To assess progress of the study toward the achievement of designated purposes.

4. To review the conclusions and recommendations of the study.

5. To act as a "sounding board" for the Study Director.

CHAPTER 1

NATIONAL PROJECTIONS FOR MANPOWER NEEDS OF THE FUTURE

Congress has made abundantly clear, through the passage of the Vocational Act of 1963, that it considers the development of the nation's manpower resources to be a major tool in combating unemployment and poverty and maintaining continued economic growth in America. Further evidence of national concern with manpower development has been reflected in Congressional support for massive programs of Federal assistance to public schools and higher education. You may be interested to know that a recent inventory revealed that there are in existence thirty-four Federally assisted manpower development programs, exclusive of general aid to education and in-service training. There are many excellent studies which have projected manpower needs for the next decade and beyond. Their conclusions are based upon past statistics and the seasoned judgments of experts concerning future trends. The studies agree on the following trends:

1. The total labor force is expected to rise about 1 1/2 million a year and the proportion of the population in the labor force will increase.

2. There will be a continuing crisis of large scale entry of youth into the job market.

3. Women will make up a greater proportion of the labor force than they have in the past.

4. The level of educational attainment will be a critical factor in matching workers and jobs of the future. The proportion of laborers will be smaller with the need for more skilled workers showing a sharp increase.

5. The fastest growing occupations during the next decade will continue to be the professional and technical, service and clerical occupations.

6. A rapid growth of jobs is expected in the health occupations, which will be supported and accelerated as a medicare program takes effect.

7. There will be an increasing demand upon the worker for better education. Even high school graduates will find it difficult to get jobs without extra training and vocational or technical preparation.

Tables 1 and 2, and Charts 1, 2, 3, and 4 lend support to the trends stated.

TABLE 1

AVERAGE ANNUAL CHANGE IN THE LABOR FORCE, 1960-80

Sex and Age	Actual Change, 1960-64	Projected Change		
		1964-70	1970-75	1975-80
14 Years and Over				
Both sexes: Number (thousands) --------	973	1,505	1,529	1,552
Percent --------	1.3	1.8	1.7	1.6
14 to 24 Years				
Both Sexes: Number (thousands) --------	567	723	444	299
Percent	3.8	4.0	2.1	1.3
25 Years and Over				
Men: Number (thousands)-----	69	351	629	762
Percent ---------	.2	.8	1.4	1.6
Women: Number (thousands)---	337	430	456	491
Percent ---------	1.8	2.0	1.9	1.9

NOTE: These projections assume the highest levels of employment consistent with recent peacetime experience and may be slightly conservative in relation to rates of labor force participation which might be generated by a prolonged period of full employment.

Details may not add to totals due to rounding.

WHAT ABOUT TOMORROW

All of you who are involved in this great effort to prepare our young people for gainful employment can take some pride in the impressive vote of confidence you have received from the nation, through Congress and the passage of a series of laws that will help meet the manpower needs of the future.

As incomes rise and the population spends more and more on all kinds of services, the service industries are expected to grow faster than any of the other groups, probably increasing their employment by 61% in 1975. Construction activity is also expected to grow very rapidly as a rising population and new families demand more homes and apartments and as government funds are used to spur construction of schools, hospitals, and roads. If goals for economic growth and overall employment are reached, construction employment will increase 52% by 1975.

By 1975, employment of professional and technical workers may increase by well over two-fifths. The growth in scientific and technical employment, which has been a feature of post-war occupational trends, will continue to be rapid. The Bureau of Labor Statistics estimated in a report issued last year that the demand for technicians will grow at the same rate as the rapidly increasing demand for scientists and engineers. Further, the report estimated that the supply of technicians will continue to fall short of the numbers required.

Probably the most significant overall change in the nation's occupational structure has been the shift toward the white-collar jobs. The largest group of the white-collar workers (clerical and salesworkers) is also expected to have a rate of employment increase close to or greater than that projected for the work force generally. The number of clerical workers needed should grow about one-third by 1975. The overall growth for the skilled workers as a result of growing needs for mechanics and repairmen, building trades craftsmen, and foremen is projected at one-fourth, roughly the same rate as that projected for employment generally.

In view of the continued declines in agricultural employment shown by the employment projections for major industries, decreasing requirements for farmers and farm workers are of course indicated. By 1975, employment in this broad occupational group may be nearly one-fourth below the 1964 employment figure.

NEED TO RAISE OUR LEVELS OF GENERAL EDUCATION

A labor department study has indicated that today the average twenty-year-old man in the work force could be expected to change jobs about six or seven times during his remaining working life. We, therefore, have to train young people not only for specific jobs but must provide them with a sound general education which will equip them for job changes. As President Johnson said in his 1965 Manpower Report to Congress, "Many manpower difficulties can be traced to education deficiencies. Today's and tomorrow's world of work puts a premium on capacity for skill development and for re-development to meet increasingly frequent changes throughout life. Education is the prime developer of such capacity."

EDUCATIONAL ATTAINMENT

It should be noted that in "Table 2" educational attainment of the national labor force, twenty-five years old and over in 1964, 78.2% had achieved no more than a high school education, and the projection for 1975 is that 74.3% of our total labor force will have received no more than a high school education.

QUESTION FOR THE EDUCATOR

A primary question for the educator is, "Are we preparing our youth for local, state, regional, or national labor markets?" If youths remain in the local community, preparation depends upon local conditions. If young people seek employment elsewhere preparation is for a broader labor market than the local one. Will the needs of the local labor market be a sufficient guideline for the education of youth? It should be recognized that local labor markets reflect the changes and the broader economy which affect the local labor market employment patterns.

CHAPTER 2

MICHIGAN'S MANPOWER PROJECTIONS

Michigan's manpower projections are very similar to those on the national level. In Michigan, we are going to have a tremendous growth in population during the next ten years. It requires no exceptional talent to foresee that the next decade will be full of challenges that will test to the utmost the abilities and the capacities of labor, business, management, educational institutions, research groups, and governmental agencies. In addition the kinds of jobs industry will need manpower for are changing. The biggest increases in manpower will occur in the professional, technical, clerical, sales, and service jobs. Youth and those workers displaced because of job obsolescence must be trained for these new jobs. Those people who have failed to finish high school will be severly handicapped in obtaining employment in many of the newly created opportunities. The following are a few of the highlights as projected by the Michigan Employment Security Commission:

By 1970 Michigan's population will reach 9.2 million which will represent an 18% increase over the 1960 population. It is significant to note that the gross number of young workers entering the labor force is twice as great as the net increase in the entire labor force. This is due to the withdrawals from the labor force because of death, retirement, marriage, etc.

Spectacular employment growth will occur in the service, trade and the construction industries over the next few years. Service industries at the present time are growing much faster than the production industries. This spectacular growth that is taking place in the service industry can be explained mainly by high levels of personal income, greater leisure time, by rising volume of business activity, longer life expectancy, rapidly growing population, and by changing patterns of living. Service industries are growing 20% faster than production industries. In the service industries, services as shown in Chart 5, will grow by 37.3%, trade will grow by 31.5%, construction will grow 30.7%, government will grow by 18.7%, finance, insurance, and real estate will grow 18.4%, transportation and public utilities industries will grow by 10.4%. In the production industries the only major growth will take place in the construction industry which will grow by 30.7%. Important to note is that agriculture will decline by 18.9%.

Along with the expansion of our labor force, major changes will take place in the age composition. This is primarily due to the great number of children born in the years following World War II, who are now entering the labor force. In 1965, 159,000 reached the age of eighteen in Michigan, an increase of 50% since 1960. By 1970, there will be 165,000 youngsters reaching eighteen that year.

It is important to note (Chart 6) that the projections indicate that 603,000 youths will be in high school in 1970 and 250,000 will be in college. This would leave 452,000 youths that the high schools must prepare for employment.

CHAPTER 3

FACTS ABOUT THE MONROE COUNTY INTERMEDIATE SCHOOL DISTRICT

GEOGRAPHIC AREA SERVED

The Monroe County Intermediate School District is for the most part located in Monroe County, although its boundaries do not coincide with those of the county. The district is a separate governmental body operated by the Monroe County Intermediate Board of Education. Monroe County, which is situated twenty-one miles south of Detroit and five miles north of Toledo, Ohio, covers an area of 562 square miles which includes a population of more than 110,000.

The area is served by thirteen independent school districts. These districts contain a total of forty-five elementary schools, seven junior high schools, and nine high schools. In addition, there are fourteen parochial elementary schools and two parochial high schools. Total school enrollment for 1965 was 32,153.

The map in Figure 1 shows the location of the high schools and the boundaries of the Intermediate School District and Monroe County.

POPULATION PROJECTIONS FOR MONROE COUNTY

These projections are from the Comprehensive Development Plans for Monroe County region prepared for the Monroe County Regional Planning Commission by Parkins, Rogers, and Associates, Incorporated. Three projection methods were used to compute population estimates A, B, C, as presented in the tables. Each of these estimates is based upon a series of assumptions. The main assumption of Estimate A is that limited utility construction will take place within the area in the next few decades and population growth will continue at its present rate.

Estimate B, the medium projection, assumes that State Act 342, which allows townships and municipalities without bonding powers to indirectly use the bonding powers of the county, will be extensively used in the future. The bonding technique greatly increases the probability of population expansion in the area.

Estimate C has been developed as a maximum probable projection of the Monroe County Regional Planning Area's population growth if a high rate of utility construction is witnessed. The area's strategic location between Detroit and Toledo makes this maximum development estimate possible.

FINAL PROJECTIONS

In the final analysis it should be noted (Chart 7 and Table 3) that the regional planning area may follow the population trends indicated by Estimate A until, for example, 1980 when a dramatic influx of residents may create greater populations coinciding with Estimate C's rate of increase. The area may also follow the population trends noted in Estimate C for a decade only to slow in the following decade and become aligned with Estimate B's growth rate. Therefore, periodical re-alignment of the estimates illustrated in Chart 7 should be instituted so that the Monroe County Comprehensive Development Plan will have the most accurate population estimates available.

FUTURE TRENDS IN URBANIZATION

Monroe County will experience three centers of urbanization in the near future. The area adjacent to Lake Erie between Detroit and Cleveland is anticipated to be one of the largest urban concentrations in the nation by the year 2000. As a result of the regional urbanizing trends, much of the area's population gain will occur at its northern and southern extremes, adjacent to the two counties containing large urban population, Wayne (Detroit), and Lucas (Toledo), illustrated in Figure 2. The third center of urbanization in the area surrounds the City of Monroe.

SUMMARY

The area's population will rise to a most probable estimate of 137,523 residents by 1970, and 345,932 inhabitants by 2000. The townships of Bedford, Frenchtown, and Monroe will continue to absorb a greater proportion of the area's increasing population.

SCHOOL ENROLLMENT AND PROJECTIONS

Table 4 indicates school enrollment for the period from 1960 to 1966. A total school enrollment in 1965 was 32,153. This total includes public and parochial students. It is important to note in Table 4 that the high school population (10-12) for 1965-66 was 5,879.

Table 5 shows the estimated population and the school enrollment projections for 1964 through 1975. It should be noted here that the high school enrollment (10-12) for 1974-75 is 6,573.

Table 6 shows a total labor force and employment projections for Monroe County through 1980.

CHAPTER 4

SURVEY OF BUSINESS AND INDUSTRY

One of the major objectives of this study was to determine the current and projected personal needs of business and industry. A sampling technique was used to survey 500 business and industries in Monroe County. The firms selected for participation in the study were surveyed by questionnaire (copy in the appendix). Before the first mailing of the questionnaire, the Monroe Evening News provided an advance article explaining the purpose of the area survey. Later the Monroe Evening News printed a follow-up article before the second mailing of the questionnaire. A third mailing was sent with a cover letter (copy in the appendix) encouraging 100% participation by employers. A total of 61.6% responded to the questionnaire.

For the purpose of a more detailed evaluation on the basis of the sampling technique used, all business and industry was divided into four categories:

(1) 100% of all firms employing 50 or more employees were surveyed by personal interviewers;

(2) 100% of all firms employing 25 to 49 employees were surveyed by mailing the questionnaire;

(3) 50% of those firms employing 6 to 24 employees were surveyed by mail questionnaire;

(4) 25% of those firms employing 1 to 5 employees were surveyed by mail questionnaire.

Categorized in this way there was an 88.7% return in the 50 and over group, 90.3% return in the 25 to 49 group, 79.1% return in the 6 to 24 group, and 47.2% return in the 1 to 5 group. The total of 61.6% of the firms that responded to the questionnaire represents about 35% of the total labor force of Monroe County.

SUMMARY OF EMPLOYER STUDY

Table 7 has identified the scope of the business and industry survey and estimated the total labor force for Monroe County Intermediate School District. Statistical information to help group business and industry by number of employees was supplied by the Monroe Chamber of Commerce and the United Fund of Monroe County. The number of employees in the returns does not necessarily coincide with the group size because of growth that has taken place since the information was obtained.

Table 8 identifies the activities of the firms that responded to the questionnaire. Please note that the total percentage will not equal 100% because many firms are engaged in more than one activity; (example, retailing firm may have a service department). It should also be pointed out that the majority of the 24.7% of responses for other activities belong under service establishments.

The major points of interest in Table 8 indicate that over 50% of the workers in Monroe County area are employed with industrial or manufacturing firms and approximately 2 out of every 10 firms are engaged in retailing activity as their major activity. Table 9 identifies the type of job our labor

force is employed in and the minimum educational level required for entry employment in that occupation.

Totals under minimum education for entry employment will not equal total employees in return of the questionnaire because of 2% no response.

Major points of interest in Table 9: A total of 345 general occupations were identified in the survey. This total included write-ins. However, it does not include top management positions. A total of 10,790 employees were identified under the 345 general occupations, and of this total 86.6% of all employees required no more than a high school education for entry employment in that occupation.

Table 10 identifies the expected annual rate of employment 1965 through 1970 by number of firms responding in each occupation. There was a total of 1489 responses in all occupations and of this total 32% indicated an increase, 54% indicated the annual rate would remain the same, less than 1/2% indicated a decrease, and 14% did not respond.

Table 11 identifies the local supply of qualified employees by number of firms responding. There was a total of 1489 responses of which 43% indicated a scarcity of employees, 42% adequate supply, less than 1 1/2% indicated surplus, and 13% no response.

TABLE 7

TABLE 12

ATTITUDE OF LOCAL EMPLOYERS TOWARD EMPLOYING NON-HIGH SCHOOL GRADUATES

	No. of Responses	% of Responses
Perform satisfactorily in some jobs	73	23.7%
Need additional education or training	36	11.7%
Unsatisfactory	29	9.4%

EMPLOYER OPINION AND PRACTICE

Employers were asked to recall the employing practices of their firm over the past five years and check the statements that best describe their evaluation of young persons who have applied for entry employment with their firm.

In Table 12 a total of 44.8% of the firms were identifed as having experience in employing non-high school graduates, and of the 138 total responses, nearly half of the employers indicated: 1) non-high school graduates needed a considerable amount of additional education and/or training before they can perform satisfactorily, 2) were completely unsatisfactory because of a lack of interest and knowledge, 3) could not follow instructions, 4) not dependable, 5) no sense of responsibility, 6) need too much supervision and numerous other reasons.

It is important to note that nearly 56% of the employers did not respond to the questions about non-high school graduates. Presumably, these employers do not hire non-graduates and many of the employers that did respond indicated that they only employ non-graduates who are still in school on a part-time basis. It was emphasized by many non-graduate employers that they shied away from employing "dropouts" if at all possible, and in necessity only hired them for common labor and routine jobs.

TABLE 13

ATTITUDE OF LOCAL EMPLOYERS TOWARD EMPLOYING HIGH SCHOOL GRADUATES

	No. of Responses	% of Responses
Reasonably well prepared for entry employment	88	28.6%
Need additional education or training	45	14.6%
Inadvisable to employ except for unskilled jobs	21	6.8%
Unemployable because of a lack of occupational training	55	17.9%

In Table 13, 68% of the employers evaluated high school graduates who have applied for entry employment with their firm. Of the 209 employers who responded to this part of the question, 58% indicated: 1) high school graduates need a considerable amount of additional education and training before they can perform satisfactorily, 2) it is inadvisable to employ high school graduates except for unskilled jobs, 3) they are virtually unemployable because of a lack of occupational training.

TABLE 14

EXTENT THAT EXISTING EDUCATIONAL FACILITIES MEET OCCUPATIONAL NEEDS OF THE FIRM

	No. of Responses	% of Responses
Very well	46	14.9%
Fairly well	135	43.8%
Poorly	63	25.5%
No response	64	20.8%

The answer is NO for the majority. Of the 224 firms that responded, more than 81% indicated that existing educational facilities in Monroe County are not adequately preparing our employment-bound youth for entry employment in the labor market.

TABLE 15

ATTITUDE OF LOCAL EMPLOYERS TOWARD FINANCING VOCATIONAL EDUCATIONAL FACILITIES

	No. of Responses	% of Responses
County-wide financing	137	44.5%
Local school district financing	17	5.5%
Multiple school district financing	36	11.7%
No response	118	38.3%

The answer is COUNTY-WIDE FINANCING. Of the 190 that responded to the question, 72% favored county-wide financing. It is important to note that it was determined in a sample follow-up that about one-half of the no responses did not understand what vocational education is, and the other half did not favor any additional tax.

TABLE 16

ORGANIZED TRAINING PROGRAMS IN FIRMS

	No. of Responses	% of Responses
Yes	88	28.6%
No	183	59.4%
No response	37	12.0%

The answer is NO for the majority. Of those responding, 68% of the firms said that they did not have any formally organized training program in the company or firm. This would indicate that the majority of employers rely on public education to prepare their employees for entry employment.

TABLE 17

TYPE OF TRAINING PROGRAMS IN OPERATION BY FIRM

	No. of Responses	% of Responses
Apprenticeship	51	38.6%
Supervision	25	18.9%
Technician	15	11.4%
Plant Management	3	2.2%
Executive development	14	10.6%
Other*	24	18.2%

*Other training programs primarily include on-the-job training.

BUSINESS AND INDUSTRY HAS IDENTIFIED THE
FOLLOWING AREAS OF TRAINING NEEDED AT
THE SENIOR HIGH SCHOOL LEVEL

Trade and Industrial

- Structural steel drafting
- Industrial mathematics
- Automotive mechanics
- Masonry
- Automotive repair
- Carpentry
- Industrial electrical
- Electrical
- Heating - Air conditioning
- Office - machine repair
- Welding
- Machinist
- Millwright
- Automotive electrical
- Blueprint reading
- Basic metallurgy
- Building maintenance and grounds keeper
- Drafting and design
- Small engine repair
- Sheet metal
- Heavy equipment operator
- Landscaping and architectural
- Fabric construction and color design
- TV repair
- Horticulture
- Power mechanic
- Cabinet making
- Appliance repair

Service

- Institutional housekeeping
- Cooks or Chef
- Waitress training

Business - Office

- IBM Keypunch
- Secretarial
- Bookkeeping (case type)
- Stenographer
- Office machines
- Computer machine training
- Accounting

Health

- Dental assistant
- Nurse's Aide

Distributive Education

- Retail merchandising
- Salesmanship
- Agricultural marketing

Areas of Training at Community College

- Supervisory - management
- Dental technician
- Dental hygienist
- Sales management
- Metallurgical technician
- Automotive technician
- Business management
- Instrumentation technician
- Medical secretary

CHAPTER 5

FARM MANAGEMENT EXPRESS THEIR NEEDS

Through the cooperation of Paul Nevel, County Agricultural Extension Agent, and the agriculture teachers, 85 of the largest commercial farms in Monroe County were selected to participate in the survey. These farms represented a cross-section of all kinds of farming. The questionnaire was delivered to the farms selected by the agriculture teachers and the director of the survey. (A copy of the questionnaire can be found in the appendix.) Of the 85 farms selected, 79 questionnaires, or a total of 93%, were returned to the director's office.

TABLE 18

SIZE OF FARMS

Acres	No. of Responses	% of Responses
0-150	12	15.0%
150-250	18	23.0%
250-400	24	30.0%
Over 400	24	30.0%
No response	1	2.0%

Due to the sampling technique used, the majority of the farms were in the 250 acre and over groups.

TABLE 19

KIND OF FARMING DONE

	No. of Responses	% of Responses
Crops	74	93.7%
Livestock	40	50.6%
Both	36	45.5%

Table 19 indicates that the major kind of farming done in Monroe County is cash crops. About one-half of the farms surveyed were involved in some kind of livestock operation; however, most of them were also doing cash-crop farming.

TABLE 20

FULL-TIME MAN EQUIVALENTS PER FARM

	Average
Self	.99
Family	.8
Hired	.15
Total	1.95

Including the family and hired personnel there is an average of two full-time man equivalents now working on each commercial farm. However, 49.3% of the farm operators said they would employ additional full-time help if it was available, dependable, and at a reasonable

wage, 40.5% said they would not hire any additional help, and 10.1% did not respond.

ESTIMATED ANNUAL NEED FOR EMPLOYEES DURING THE NEXT FIVE YEARS

Of the farm operators that responded to employing additional help, there was an estimated average annual need of 5.8 part-time employees per farm and an average of .76 full-time man equivalents per farm.

TABLE 21

FARM OPERATORS BY AGE

	No. of Responses	% of Responses
Under 25	6	8.0%
26-35	12	15.0%
36-45	24	30.0%
46-55	25	32.0%
56-64	2	3.0%
65 or over	9	11.0%
No response	1	1.0%

It is important to note that 62% of the farm operators were in the 36 to 55 age group.

AGRICULTURAL EDUCATION OF FARM OPERATORS

It was difficult to determine from the responses the number of years of agricultural education the farm operator had received at various levels of education. However, 60.8% of the farm operators indicated that they had received one or more years of high school agricultural education, 40.5% said they had taken one or more classes of adult education, which was related to agriculture, and 13.9% had some college courses or extension classes from college. A total of 25.3% of the farm operators did not respond to the question.

OPINIONS OF FARM OPERATORS TOWARD EDUCATION

To determine the farm operators interest and views about existing agricultural education programs and facilities, the following series of questions were asked:

1. Do the existing educational programs in the Monroe County area meet the agricultural training needs for your farm?

The answer is YES for the majority that responded, while 42% said NO, and 10% did not respond or did not know.

2. Are existing facilities adequate for agricultural education?

The majority said YES, while 38% said NO and 14% did not respond or did not know.

3. Would you be interested in participating in a study of plans for improving agricultural education and training at the high school and post-high school levels?

The answer is YES for the majority, 20.3% said NO, 26.5% were undecided, 5.1% did not respond.

TABLE 22

ATTITUDE OF FARM OPERATORS
TOWARD THE FINANCE OF
VOCATIONAL EDUCATION FACILITIES

	No. of Responses	% of Responses
County-wide financing	48	61.0%
Local school district financing	4	5.0%
Multiple school district financing	16	20.0%
No response	11	14.0%

The majority of NO responses were farm operators who would not support any additional school tax for any purpose.

FARM OPERATORS HAVE IDENTIFIED
THE FOLLOWING SKILLS NEEDED
AT THE HIGH SCHOOL LEVEL

Farm machinery operation
Farm machinery repair
Chemical soil testing
Horticulture
Insecticides and their application
Dairy equipment operation
Livestock feeding
Soil management and fertilizers
Welding

SUMMARY OF COMMENTS BY FARM OPERATORS

1. Agricultural education has not kept pace with the changing needs of the farmer.

2. Vocational education in general is not adequate to meet the students needs.

3. You cannot expect to develop farm mechanics with a straight academic program.

A SURVEY OF NON-FARM
AGRICULTURAL OCCUPATIONS
IN MONROE COUNTY

Summary and conclusions of a report on the first phase of a comprehensive study of agricultural occupations by F. Paul Nevel and John L. Malcommson, February, 1965:

SUMMARY AND CONCLUSIONS

1. A large number of individual businesses in Monroe County are oriented toward the supply of goods and services for agriculture. While over one hundred such individual businesses were identified, this does not mean that all such businesses in the county were surveyed, since some were undoubtedly overlooked.

2. From the job titles and job descriptions, it appears many of the workers employed in the businesses surveyed may be dependent upon knowledge, understanding, and/or skill in the areas of plant science, animal science, soil science, agricultural economics and/or agricultural mechanization.

3. There were a sufficient number of businesses reporting service, retailing, wholesaling, purchasing, processing, and warehousing, as major business functions, to suggest that some training programs in these areas may be needed.

4. There is sufficient evidence from the data obtained through this survey to suggest that much importance should be placed upon further study of occupations to determine such things as:

a. Annual entry opportunities in these occupations
b. Competencies needed for entry and satisfactory performance
c. Continuing education needs

5. Based only on the evidence furnished by this first phase of the comprehensive study which was outlined in the original proposal, it would appear that increased attention should be given to the following:

a. Enrolling students in courses of vocational agriculture who are interested in the businesses which are oriented toward providing goods and services for agriculture.
b. Developing cooperative work training programs with agri-business industries for students of vocational agriculture.
c. Developing programs of continuing education for persons employed in the agri-business industries.

6. The personal contacts with agri-business revealed that these businesses are experiencing difficulty in obtaining and retaining qualified workers. If this situation is to be corrected, more information concerning job opportunities in the agri-business occupations must be provided to students, parents, counselors, youth leaders and others, who work with rural youth. There are also strong implications for the development of educational programs, both on the high school and post high school level. It is very evident that these industries cannot afford to pay wages, for untrained persons, which are competitive with other types of industry in the area.

CHAPTER 6

HIGH SCHOOL SENIORS EXPRESS THEIR VIEWS

In previous chapters, national, state, and local economy, population trends, labor trends, employment needs and opinions of farm management, and business and industry were reviewed. The needs of business and industry and the offerings of the school should be coordinated. The school programs also need to be geared to: 1) student availability through their needs and desires, 2) parent interest, 3) general community interest and 4) community standards. The next three chapters will entail a review of findings obtained from high school seniors, parents and graduates.

THE SURVEY OF STUDENTS

Questionnaires regarding curriculum choice, amount of further education desired, attitude toward specialized training and career choices were completed by 95% of all the twelfth grade students in the Monroe County Intermediate School District, including the parochial school students. In all, 1507 students were included in the survey of which 51% were boys and 49% were girls. (A copy of the survey instrument is reproduced in the Appendix.)

TABLE 23

YEARS LIVED IN SCHOOL DISTRICT

	% of Responses
Less than 1 year	2.0%
1-2 years	4.0%
3-5 years	12.0%
6-10 years	15.0%
Over 10 years	64.0%
No Response	2.0%

It is apparent from Table 23 that one-third of the high school seniors received their education from two or more school districts.

TABLE 24

CURRICULUM BEING FOLLOWED

	No. of Responses	% of Responses
Business Education	380	25.0%
College Preparatory	594	39.0%
Shop or Industrial Arts	134	9.0%
Agriculture	34	2.0%
Homemaking or Home Economics	19	1.0%
General	305	20.0%
Other	29	2.0%
No Response	12	1.0%

It is observed in Table 24 that over 60% of the high school seniors are not in a college preparatory curriculum and, therefore, should probably be enrolled in an employment preparation program.

A comparison study by rank in class was made to determine which group of students was being served the best by the high school's program of studies. To facilitate this comparison, the students were asked to rank themselves in their graduating class. It is interesting to observe that exactly one-third or 33% of the high school seniors ranked themselves in the top third of their class. However, 52% ranked themselves in the middle third and only 14% placed them-

selves in the lower third of their class. One percent of the students did not respond to the question. This study indicates that below average students do not tend to consider themselves below average.

TABLE 25

PROGRAM OF STUDIES FOLLOWED BY SENIORS ACCORDING TO THEIR RANK IN CLASS

Program of Studies	Top Third	Middle Third	Lower Third
Clerical or Business	17.9%	31.5%	17.1%
College Preparatory	70.6%	28.4%	7.2%
Shop or Industrial Arts	2.2%	10.1%	18.9%
Agriculture	.6%	2.2%	6.3%
Homemaking or Home Economics	0%	1.7%	2.7%
General	5.6%	23.7%	38.3%
Other	2.0%	2.0%	1.4%

The comparison study in Table 25 revealed that the majority of the employment-bound students are identified in the middle and lower thirds of their graduating class. However, it should also be noted that nearly 30% of the students who ranked themselves in the upper third of their graduating class are not identified in a college preparatory program of studies.

TABLE 26

HOW WELL THE HIGH SCHOOL IS PREPARING YOU FOR WHAT YOU PLAN TO DO AFTER GRADUATION

	Total		Percentages by Sex	
High School Preparation	No. of Responses	% of Responses	Boys	Girls
Just what is needed	372	25.0%	20.2%	29.3%
Very well in some ways, other ways not adequate	702	47.0%	43.4%	49.9%
Fairly well, but not the kind of training I would like	335	22.0%	27.2%	17.1%
Poorly	88	6.0%	8.5%	3.1%

TABLE 27

COMPARISON OF PROGRAM OF STUDIES WITH HIGH SCHOOL PREPARATION

Program of Studies	Just what is needed	Very well in some ways, other ways not adequate	Fairly well, but not the kind of training I would like	Poorly
Clerical or Business	26.1%	28.8%	20.6%	11.4%
College Preparatory	50.0%	42.7%	23.6%	27.3%
Shop or Industrial Arts	5.6%	8.6%	11.6%	15.9%
Agriculture	3.0%	1.4%	2.4%	5.7%
Homemaking or Home Economics	.8%	1.3%	2.1%	0%
General	11.3%	15.1%	37.3%	35.2%
Other	2.4%	1.7%	1.5%	3.4%

TABLE 28

COMPARISON OF HIGH SCHOOL PREPARATION WITH RANK IN CLASS

	Rank in Class		
High School Preparation	Top Third	Middle Third	Lower Third
Just what is needed	30.6%	22.3%	19.9%
Very well in some ways, other ways not adequate	51.7%	47.3%	31.6%
Fairly well, but not the kind of training I would like	12.9%	24.6%	35.9%
Poorly	4.4%	5.2%	12.1%

The survey revealed in Table 26 that 75% of the high school seniors were not being prepared adequately for what they plan to do after graduation. In comparing boys with girls (Table 27) it is found that the school's program of studies are meeting the needs of the girls more favorably than they are meeting the needs of the boys. Perhaps this is due to the business education curriculum that is offered at all of the local high schools. However, note in Table 28 that the clerical and business education students are quite undecided about how well their high school is meeting their needs. No doubt some schools are doing a better job than others. It is very evident in Table 28 that the schools are not offering the kind of training the students in a general education curriculum would like or need. Of those students who said the high school is providing "just what is needed", 50% are identified in the college preparatory curriculum. It is important to note in Table 29 that the high schools are meeting the needs of the above average students better than they are meeting the needs of the average and below average students. It should also be pointed out that only about 30% of the students in the top third of their graduating class were of the opinion that the school was providing just what is needed.

OPINION OF STUDENTS CONCERNING HOW THE HIGH SCHOOL COULD PREPARE THEM BETTER

To determine the student's interest in vocational education, the following question was asked: "How do you think the high school could prepare you better?" The answer was through VOCATIONAL EDUCATION. Fifty-four percent said provide more courses in vocational education. Twelve percent said a host of other reasons, most of which were specific vocational education courses, and 12% did not respond.

Students were asked to identify their first job preference they would like to be doing ten years from now. The following table reveals the results in 14 occupational groups.

TABLE 29

CAREER PREFERENCE OF HIGH SCHOOL SENIORS

Occupations	No. of Responses	% of Responses	Occupations	No. of Responses	% of Responses
Unskilled	0	0%	Professional (4 or more years of college)	406	27.0%
Semi-skilled	113	8.0%	Agricultural	24	2.0%
Skilled tradesmen	230	15.0%	Military (as a career)	14	1.0%
Technical (requiring 2 years of college)	152	10.0%	Transportation	6	0%
Sales	20	1.0%	Housewife	75	5.0%
Business	69	5.0%	Others or no choice	178	12.0%
Clerical	274	18.0%			
Service	90	6.0%			

TABLE 30-A

HELP RECEIVED FROM HIGH SCHOOL ON CAREER PLANS

	All Seniors		Percentages by Sex	
	No. of Responses	% of Responses	Boys	Girls
A lot of help	249	17.0%	13.2%	20.1%
Considerable help, could have used more	416	28.0%	24.0%	31.2%
Some help but not very much	512	34.0%	37.6%	30.3%
Little or no help	314	21.0%	24.0%	17.6%
No response	16	1.0%	1.2%	.8%

TABLE 30-B

HELP RECEIVED FROM HIGH SCHOOL ON CAREER PLANS

	Top Third	Middle Third	Lower Third
A lot of help	20.3%	16.1%	10.2%
Considerable help, could have used more	30.0%	27.8%	19.9%
Some help but not very much	30.2%	37.4%	33.0%
Little or no help	19.1%	17.7%	36.9%

TABLE 31

COMPARISON OF PROGRAM OF STUDIES FOLLOWED AND HELP RECEIVED FROM HIGH SCHOOL ON CAREER PLANS

	Help Received from High School			
Program of Studies	A lot of help	Considerable help, could have used more	Some help, but not very much	Little or no help
Clerical or Business	27.3%	29.6%	23.6%	20.7%
College Preparatory	48.2%	43.9%	59.8%	33.1%
Shop or Industrial Arts	4.8%	5.3%	12.3%	10.5%
Agriculture	1.6%	2.4%	2.7%	1.9%
Homemaking or Home Economics	1.2%	1.2%	.8%	1.9%
General	13.3%	14.5%	23.2%	28.0%
Other	3.2%	1.9%	.8%	2.9%

In Tables 31-A and B, it is observed that 83% of the high school seniors have not received sufficient help in formulating career plans, and over 55% indicated that they had not received very much, little, or no help. In the boys and girls comparison, it is quite evident that the girls have received more help than the boys in their career planning. The survey also revealed that students in the top third of their graduating class are receiving considerably more help in making career plans than the students in the lower two thirds of their class. Perhaps this would indicate that girls who rank high in their graduating class appear to have received the most help from the high school in deciding what they plan to do after graduation. However, it is also important to note that of those students who ranked themselves in the top third of their graduating class, 44% were boys and 56% were girls.

TABLE 32-A

HOW STUDENTS THINK THEIR PARENTS FEEL ABOUT WHAT THEY DO AFTER GRADUATION

	No. of Responses	% of Responses	Percent Boys	Percent Girls
Work or learn a trade	484	32.0%	28.9%	35.3%
2 year technical program	222	15.0%	15.8%	13.7%
4 year college program	592	39.0%	45.8%	32.6%
Undecided	174	12.0%	7.7%	15.7%
No Response	35	2.0%	1.7%	2.7%

TABLE 32-B

COMPARISON BY RANK IN CLASS

	Top Third	Middle Third	Lower Third
Work or learn a trade	12.7%	38.6%	53.4%
2 year technical program	9.5%	18.6%	13.1%
4 year college program	66.8%	29.1%	12.6%
Undecided	9.5%	11.5%	17.5%

The responses in Table 32-A and B seem quite realistic to parents' aspirations for their children. Fifteen percent more boys than girls thought their parents would like them to take some kind of a college program. In comparing the top third of the class with the lower third it is found that the ratio is three to one favoring some kind of a college program, and approximately two to one in comparing the middle third with the lower third. Another observation that can be made is 15% more students think their parents would like for them to attend college than are definitely making plans to attend.

TABLE 33

PART-TIME JOB DURING SCHOOL

	% of Responses	Boys	Girls	Top Third	Middle Third	Lower Third
Yes	41	53.8%	28.0%	38.8%	42.2%	43.7%
No	46	34.6%	57.4%	50.7%	45.2%	35.9%
No Response	13					

Table 33 reveals the majority of the students that are working part-time while still in school are boys and most of the part-time workers are identified in the lower two-thirds of their graduating class.

TABLE 34

ASPIRATIONS OF HIGH SCHOOL SENIORS
TOWARD EXPANDED TYPES OF VOCATIONAL TRAINING

Programs	No. of Responses	Programs	No. of Responses
Air conditioning and refrigeration	93	Machine trades	338
Appliance repair	123	Foundry	70
Auto body and fender	278	Landscape	198
Auto mechanic	400	Nursery	133
Business machines	435	Nurses Aide	328
Cosmotology	345	Plumbing and pipe fitting	172
Data processing	469	Practical nursing	328
Electrician	340	Printing	153
Cabinet making	97	Retail sales	274
Carpentry	171	Welding	277
Cook, commercial	166	Waiter or waitress	112
Electronics	417	Work attitudes	257
		Other	214

It is evident from the response in Table 34 that the interest is very high towards all types of vocational training courses. In addition to the courses listed, law enforcement, drafting and design, dental technology, forestry and conservation, languages, advertising and display, fashion design, fluid power and hydrolics, were identified as high interest programs.

TABLE 35

SENIORS PLANNING TO ATTEND COLLEGE

	No. of Responses	% of Responses	Top Third	Middle Third	Lower Third
No	325	22%	7.8%	23.1%	48.1%
Probably not	151	10%	6.6%	11.0%	14.6%
Probably so	182	12%	8.0%	16.6%	4.9%
Yes	562	37%	67.6%	27.2%	5.3%
Don't know	264	18%	9.5%	20.7%	23.3%
No response	23	1%			

The percentages in Table 35 can be compared quite favorably with the high school curriculums in which the seniors say they are currently enrolled. Whereas, 39% of the seniors say they are enrolled in a college preparatory curriculum, 37% see themselves as definitely attending college and 12% say they will probably attend. In comparing these percentages with rank in class it is found that about 70% of the seniors in the top third of their class are enrolled in a college preparatory curriculum; whereas, about 67% in the top third are definitely planning to attend college, and 8% see themselves as probably attending.

Only those students who answered "NO", "PROBABLY NOT" or "DON'T KNOW" as indicated in Table 35 were eligible to respond in Tables 36 and 37. In Table 36 it is observed that on the job training and apprenticeship training to learn a trade are the types of training that interest seniors the most after graduation. Table 37 suggests that low grades, want to work and make money, and can't afford to go to college are the most important reasons why seniors do not plan to attend college.

TABLE 36

TYPES OF TRAINING THAT INTEREST NON-COLLEGE-BOUND SENIORS

	No. of Responses	% of Responses
Apprenticeship training to learn a trade	183	24.7%
On-the-job training	290	39.2%
Correspondence study	18	2.4%
Post graduate in high school at night	27	3.6%
Adult education	26	3.5%
Military service training	77	10.4%
Other	83	11.2%
No response		5.0%

****

TABLE 37

REASONS WHY HIGH SCHOOL SENIORS DO NOT PLAN TO ATTEND COLLEGE

	No. of Responses	% of Responses
Want to work and make money	127	17.2%
Can't afford it	109	14.7%
Parents don't want me to	2	.3%
Can be just as successful without going to college	39	5.3%
Waste of time	11	1.5%
Low grades	187	25.3%
Want to get married	74	10.0%
Tired of school	39	5.3%
Other		7.0%
No response		20.0%

CHAPTER 7

SURVEY OF PARENTS

Parents of all eighth graders in all public schools and parochial schools were surveyed by questionnaire. The purpose was to gather information and opinions from parents of students who are about to enter high school as to their aspirations towards future education for their children and their attitude towards vocational education.

Of the 2,324 parents that were surveyed, 76% of the questionnaires were completed and returned to the director's office. The questionnaire was filled out by 41% mothers only, 22% fathers only, 35% by both mother and father, 1% by legal guardian and 1% did not respond to the question. It was also determined that 93% of the heads of household were male and 7% were female. (A copy of the questionnaire can be found in the Appendix.)

The following charts reveal that nearly 1/2 of the heads of household and parents of eighth grade children in Monroe County work outside of Monroe County. 41% indicated they have lived in their present school district less than 10 years. Perhaps this would indicate that Monroe County's population is mobile, therefore, our high schools should be meeting employment needs beyond the county lines as well as local employment needs. More evidence of this mobility will be found in Chapter 8.

WHERE HEAD OF THE HOUSEHOLD WORKS AND YEARS LIVED IN PRESENT SCHOOL DISTRICT AS A FAMILY

CHART 9

WHERE EMPLOYED

CHART 10

YEARS LIVED IN PRESENT SCHOOL DISTRICT

CHART 11

TYPE OF OCCUPATION HELD BY HEAD OF HOUSEHOLD

TABLE 38

PARENTS EXPECTATIONS OF THEIR EIGHTH GRADE CHILD ATTENDING COLLEGE

	No. of Responses	% of Responses
Definitely will expect to attend	455	26.0%
Probably attend	431	24.0%
Uncertain	628	36.0%
Probably not attend	175	10.0%
Definitely do not expect to attend	71	4.0%

Approximately 50% of the parents have some expectation that their child will enter college. It was also observed that about 8% more fathers than mothers expect their child to enter college.

ATTITUDE OF PARENTS TOWARDS VOCATIONAL EDUCATION

To determine the parents' views about the value of Vocational Education, the following series of questions were asked:

1. In your opinion are high school students adequately prepared by the schools to select a vocation?

	No. of Responses	% of Responses
Yes	405	23.0%
Fair	742	42.0%
No	405	23.0%
No idea	203	12.0%

Only 23.0% of the parents thought that the high school was doing an adequate job of preparing the students to select a vocation while 77% said preparation was not adequate or did not know if the students were adequately prepared. When comparing the responses of fathers and mothers, 6% more fathers said No, preparation is not adequate.

2. In your opinion is the high school in your school district providing sufficient opportunities for students to learn a vocation?

	No. of Responses	% of Responses
Yes	504	29.0%
Fair	615	35.0%
No	371	21.0%
No idea	260	15.0%

A total of 56% said that to some degree the high school is not providing sufficient opportunity for students to learn a vocation and an additional 15% did not know. In comparing mothers' and fathers' responses, 2% more mothers said Yes than fathers.

3. In your opinion is there a need for additional vocational programs on the 11th and 12th grade levels?

	No. of Responses	% of Responses
Yes, many	645	37.0%
A few	599	34.0%
None	42	2.0%
Don't know	447	25.0%

Seventy-one percent of the parents indicated that additional vocational education programs are needed while only 2% said no additional programs are needed. It was also revealed that 10% more fathers than mothers said yes, many additional vocational programs are needed.

TABLE 39

EXPANDED TYPES OF VOCATIONAL EDUCATION COURSES PARENTS WOULD LIKE TO SEE TAUGHT

Vocational Courses	No. of Responses
Air conditioning & refrigeration	424
Appliance repair	396
Auto body and fender	272
Auto mechanic	603
Business machines	923
Cosmotology	397
Data processing	504
Electrician	785
Cabinet making	307
Carpentry	450
Cook, commercial	215
Electronics	947
Machine trades	661
Foundry	71
Landscape	200
Nursery	161
Nurse's Aide	632
Plumbing & pipe fitting	413
Practical Nurse	797
Printing	243
Retail sales	480
Welding	439
Waiter & waitress	125
Work attitudes	364
Other occupations	286

Other specific vocational programs as well as technical programs (requiring two years of college) that were identified by the parents were too numerous to include in this report.

To determine how additional vocational education programs should be financed, the following question was asked:

4. The type of instruction, equipment and buildings needed for vocational-technical training is costly. In your opinion, would this be more easily accomplished by:

	No. of Responses	% of Responses
County-wide financing	970	55.0%
Local school district financing	175	10.0%
Multiple school district financing	382	22.0%
No response	239	14.0%

5. Providing that your children do not expect to attend college and a quality vocational program were made available to them, would you encourage them to avail themselves of this kind of training?

The answer is Yes for the majority. Seventy-nine percent said Yes, while 14% said possibly and only 2% said No. Five percent did not respond to the question.

6. Are you concerned about high school students dropping out of school?

	No. of Responses	% of Responses
Yes	1609	91.0%
No	87	5.0%
Don't Know	49	3.0%

7. Do you think broadening the vocational opportunities in high school will keep students in school longer?

	No. of Responses	% of Responses
Yes	1282	73.0%
No	122	7.0%
No effect	63	4.0%
Don't know	271	15.0%

The survey verifies that parents are concerned about high school "drop outs", and overwhelmingly agree that expansion of the vocational education curriculum would motivate students to stay in school longer.

8. If we have vocational programs as discussed above, would you be interested in attending evening school to improve your own occupational competencies?

	No. of Responses	% of Responses
Yes	870	49.0%
No	358	20.0%
Don't know	500	28.0%

It is important to note that the 870 parents who definitely indicated they would be interested in attending evening school, if the facilities were available, are from one age group of students.

TABLE 40

IN YOUR OPINION, IS THE HIGH SCHOOL IN YOUR DISTRICT PROVIDING SUFFICIENT OPPORTUNITIES FOR STUDENTS TO LEARN A VOCATION? (by the parent who filled out the questionnaire)

	Mother	Father	Both	Guardian
Yes	30.7%	27.5%	26.7%	27.8%
Fair	33.7%	36.9%	35.2%	38.9%
No	19.3%	21.7%	22.6%	27.8%
No idea	15.1%	13.6%	15.1%	5.6%

22

TABLE 41

IN YOUR OPINION, IS THERE A NEED FOR ADDITIONAL VOCATIONAL PROGRAMS ON THE 11th AND 12th GRADE LEVELS?
(by the parent who filled out the questionnaire)

	Mother	Father	Both	Guardian
Yes, many	30.8%	40.7%	40.5%	38.9%
A few	36.3%	31.3%	33.3%	33.3%
None	2.1%	3.5%	2.0%	0.0%
Don't know	28.3%	23.2%	23.3%	22.2%

CHAPTER 8

SURVEY OF HIGH SCHOOL GRADUATES

This study includes all of the 1965 graduates from 11 senior high schools including the two parochial high schools in Monroe County Intermediate School District. A total of 829 completed questionnaires were received, which represents a 68% return. (A copy of the questionnaire can be found in the Appendix.)

WHERE RESPONDENTS ARE LIVING

Seventy-two percent of the respondents are presently living in Monroe County, 4% in Lucas County, Ohio, 3% in Wayne County and 20% in other areas, which includes college students living away from home and graduates now in the military service.

DISTRIBUTION OF RESPONDENTS BY
CURRICULUM FOLLOWED IN HIGH SCHOOL

Curriculum	No. of Responses	% of Responses
General	207	25.0%
Vocational	57	7.0%
Business Education	158	19.0%
College Preparatory	378	46.0%
No Response	29	3.0%

DISTRIBUTION OF RESPONDENTS BY
RANK IN CLASS

Rank in Class	No. of Responses	% of Responses
Top Third	373	45.0%
Middle Third	362	44.0%
Lower Third	76	9.0%
No Response	18	2.0%

COMPARISON OF CURRICULUM FOLLOWED IN HIGH SCHOOL
WITH RANK IN CLASS

	Top Third	Middle Third	Lower Third
General	13.3%	63.3%	21.9%
Vocational	17.2%	67.2%	13.8%
Business Education	38.5%	51.6%	7.5%
College Preparatory	70.9%	26.5%	1.6%

It is observed in the preceding data that the majority of the respondents were either in the upper portion of their graduating class or reluctant to identify themselves in the lower third of their graduating class.

TABLE 42

EDUCATION RECEIVED SINCE GRADUATION

			Rank in Class		
	No. of Responses	% of Responses	Top Third	Middle Third	Lower Third
No additional training or schooling	141	17%	6.2%	16.6%	36.6%
On-the-job training	262	31%	21.7%	30.5%	22.0%
Business college	69	8%	5.6%	8.3%	6.1%
Trade or technical school	63	7%	3.6%	8.7%	7.3%
College or university	308	37%	50.2%	14.2%	8.5%
Adult education	31	4%	1.1%	4.6%	4.9%
Military Service	39	5%	2.4%	4.6%	7.3%
Apprenticeship	31	4%	1.3%	5.0%	2.4%
Other or No Response	78	9%	7.9%	7.6%	4.9%

Of all the graduates who have received further training or education since graduation, approximately 68% have received this training or education either in college or on the job at the place where they are employed. It is also observed that students in the top third of their class are most likely to receive additional education or training in college, while the greater percent of students who rank in the middle third will receive additional training by their employer on the job, and chances are that students who rank in the lower third are not likely to receive any additional formal training or education.

RESPONDENTS WHO ARE PRESENTLY IN COLLEGE

	No. of Responses	% of Responses
Yes, full-time	273	33.0%
Yes, part-time	28	3.0%
No	516	62.0%
No Response	12	2.0%

In addition to the data listed above, over 60% of the students identified in the top third of their class and 36% in a college preparatory program definitely said they were not going to college at the present time.

The following five questions should be interpreted with caution because of the limited number of possible answers and the high percentage of no responses.

1. If you had made a vocational choice on graduation from high school, are you now engaged in this type of work at present? Twenty-four percent said Yes, 31% said No and 31% did not have a choice at the time of graduation. Fourteen percent did not respond to the question.

2. Is your present work related to any vocational-type courses you took in high school? Of those who responded, 25% said Yes, 36% said No, 26% said they didn't take any vocational courses, and 13% did not respond to the question. However, it is important to note that when comparing these two questions with program of studies followed in high school, the 24% and 25% Yes Responses to questions 1 and 2 respectively represents the majority of those students who were identified in a commercial or business education program of studies, or a vocational program of studies. This is also true in the following question.

3. If you are now working, is this the field of work you want to stay in?

	No. of Responses	% of Responses
Yes	227	27.0%
No	220	26.0%
Undecided	127	15.0%
No Response	269	32.0%

4. In what county are you working?

	No. of Responses	% of Responses
Monroe County	225	27.0%
Wayne County	75	9.0%
Lucas County, Ohio	115	14.0%
Other (Counties)	151	18.0%
No Response	277	33.0%

It is important to note here that the 33% of No Responses to the question represents the 33% that are in a full-time college program. More important, however, is the fact that 41% of the respondents have indicated that they are presently working outside of Monroe County and in Question 5 it is also observed that 23% of the students who are in school or in training do not plan to return and work in Monroe County. This evidence certainly supports the fact that Monroe County's population and labor force is mobile and, therefore, it is important that vocational programs be developed that will meet employment needs on a regional basis.

5. If you are presently in school or in training do you plan to return and work in Monroe County?

	No. of Responses	% of Responses
Yes	97	12.0%
No	196	23.0%
Undecided	221	26.0%
No Response	329	39.0%

ATTITUDE OF STUDENTS TOWARDS VOCATIONAL EDUCATION

To determine high school graduates aspirations and attitude toward Vocational Education, the following series of questions were asked:

1. Do you feel that your high school has sufficient number of vocational courses available for the employment-bound student?

	No. of Responses	% of Responses
Yes	232	28.0%
No	453	55.0%
Don't know	116	14.0%
No Response	28	3.0%

The answer is NO for the majority. In comparing this question with rank in class, it is discovered that the percentages are almost identical for the top third and middle third, however, the NO answer for the lower third was about 10% higher than either of the upper thirds. No significant difference was observed in comparing the various programs of studies followed.

2. Would you have taken more of these vocational-type courses had they been offered?

	No. of Responses	% of Responses
Yes	347	42.0%
No	217	26.0%
Don't know	204	24.0%
No Response	61	7.0%

The majority of the Yes responses were found in the lower two thirds of the class. However, about one third of the students who ranked in the top third of their class also indicated that they would have taken more vocational-type courses had they been offered.

3. Are you presently interested in taking more training of a vocational nature?

	No. of Responses	% of Responses
Yes	355	42.0%
No	425	50.0%
No Response	63	7.0%

The following table describes the kind of vocational courses high school graduates would like to see taught providing they answered YES to the preceding questions.

TABLE 43

Vocational Courses	No. of Responses
Air conditioning and refrigeration	37
Appliance repair	53
Auto Body and Fender	54
Auto mechanic	153
Business machines	161
Cosmotology	94
Data processing	186
Electrician	123
Cabinet making	27
Carpentry	49
Cook, commercial	40
Electronics	145
Machine Trades	119
Foundry	17
Landscape	55
Nursery	39
Nurse's Aide	102
Plumbing & Pipe Fitting	75
Practical Nursing	121
Printing	54
Retail Sales	126
Welding	93
Waiter & waitress	23
Work attitudes	78

4. In which of the following types of training or education would you be most interested?

	No. of Responses	% of Responses
Paid apprentice to learn a trade	130	15.0%
Post graduate work in high school	66	8.0%
Military Service	45	5.0%
On-the-job training in industry	275	33.0%
Correspondence study	39	5.0%
Adult Education	112	13.0%
Community College, part-time	276	33.0%

The reader can observe from the preceding data that on-the-job training with a company or industrial firm and enrolling in a community college on a part-time basis were the types of training or education that interested high school graduates the most, although 21% were interested in adult education or post graduate training in the high school at night and 15% were also interested in a paid apprenticeship program to learn a trade.

5. If you were a student just entering high school and if you had a choice, what type of program would you pursue?

	No. of Responses	% of Responses
Academic-college-bound program	289	35%
Vocational-employment-bound program	158	19%
Combination of both	358	44%
No Response	24	3%

A total of 63% of the respondents indicated that if they had a choice they would either take a vocational employment-bound program of study or a combination of academic and vocational courses. In comparing by rank in class, the top third favored the academic program, the middle third favored a combination of both with less than 10% in this group favoring a straight academic program and the lower third favored the vocational-employment-bound program of study.

6. If you were (or are) a parent today, would (will) you encourage your children to follow a program of study for the employment-bound student (assuming adequate facilities were available and if your child shows an interest in and seems suited for this particular kind of program.)

	No. of Responses	% of Responses
Yes	513	62%
No	99	12%
Undecided	133	16%
No Response	84	11%

Evidence from the preceding data indicated that future parents of Monroe County will support a vocational education program.

CHAPTER 9

SURVEY OF EDUCATIONAL OFFERINGS IN INDUSTRIAL ARTS, BUSINESS EDUCATION, HOME ECONOMICS AND AGRICULTURE IN THE COMMUNITY

It was recommended by the Policy Committee that an examination of the educational offerings in industrial arts, business education, home economics and agriculture in the community might provide some insight into the degree of incentive or opportunities present in the secondary schools of Monroe County towards skilled occupational training, and might also help assess the kind of job that has been done in meeting the educational needs of our youth.

Table 44 identifies what the secondary schools in Monroe County are offering in exploratory programs and skilled occupational training. The survey included all the junior and senior public high schools; 100% of all the questionnaires were returned to the Director's office. (A copy of the questionnaire can be found in the Appendix.)

TABLE 44

COURSE OFFERINGS, FACILITIES, ENROLLMENTS AND TIME ALLOTTED FOR PRACTICAL ARTS USE AND VOCATIONAL USE

Totals	129	452	85		

In addition to examining the kind of job that the secondary schools have been doing, Table 44 has also helped assess what needs to be done to meet the Vocational Education needs of youth in the community. The following points of interest will be reviewed before making this assessment:

1. Table 26 revealed that 75% of the high school seniors were not prepared adequately for what they plan to do after graduation.

2. Table 24 revealed that 61% of the high school seniors are not in a college preparatory curriculum.

3. Public Schools' enrollment by grade lists 1535 12th graders and 1730 11th graders in the Monroe County Intermediate School District.

4. Table 44 reveals that the total time per day for vocational use of all facilities is 85 hours or 85 class periods. This includes trade and industrial classes that must be 2 to 3 periods in length.

ASSESSMENT OF NEED

Number of students in 12th grade	1535
Number of students in 11th grade	1730
TOTAL	3265
Percent of students not in a college preparatory program	x.61
Minimum number of students that need an employment preparation program	=1991.65
Class hours per student	x 3
Total class hours per student	5974.95
Students per class	÷ 20
Vocational class periods needed	=299
Vocational class periods offered now	-85
Additional class periods needed	214
Class periods per program (or facility)	÷ 6
Additional programs of studies and facilities that are needed NOW	36

Explanation

The assessment of needed facilities should not be interpreted as an accurate indication of the number of programs of studies needed because of several variables:

1. The total number of 11th and 12th grade students was based on 1965-66 enrollment figures. This enrollment figure would change each year.

2. Sixty-one percent of the students that were not identified in a college preparatory program was based on 1966 high school seniors response. This percentage would change with each senior class.

3. The number of students per vocational class was an assumption, however, it is important to note that it was observed in the study that the average number of students per vocational class is approximately 16 students depending on the interpretation of class periods and time per day room in use. It was assumed in the study that a class period was 45 to 70 minutes in length.

CHAPTER 10

SUMMARY AND CONCLUSIONS

NATIONAL, STATE AND LOCAL MANPOWER NEEDS INDICATE:

*The national labor force is expected to rise about 1 1/2 million a year with a continuing crisis of large scale entry of youth into the job market.

*Projected national, state and local employment figures for the next five years indicate a great need for skilled workers in all trades. Clerical, sales, service producing industries and health occupations will also be in much more demand.

*Todays' and tomorrows' world of work will increasingly be placing a premium on specific skill development and on the capacity for re-development to meet frequent skill changes throughout life.

SURVEY OF BUSINESS AND INDUSTRY INDICATES:

*The survey of business and industry revealed that 86.6% of all jobs less than top management positions require no more than a high school education for entry employment in that occupation. However, employers are also saying that high school graduates need a considerable amount of additional education and skill training before they can perform satisfactorily. This would indicate that additional education and skill training should be provided at the high school level.

*The majority of business and industrial firms in Monroe County do not have formally organized training programs and there is little indication that individual firms have plans to initiate their own programs. Therefore, increased coordination and communication among the schools, businesses and industries is needed.

*Business and industrial firms agree that existing educational facilities in Monroe County are not adequately preparing our employment-bound youth for entry employment in the labor market.

FARM MANAGEMENT INDICATES:

*The farm survey revealed that new concepts in agricultural education should be developed to meet the needs of the agricultural industry. High skilled programs in farm machinery operation, maintenance and repair, horticulture and farm management including insecticides and soil management should be developed.

SURVEY OF HIGH SCHOOL SENIORS, PARENTS AND GRADUATES INDICATES:

*Seventy-five percent of the high school seniors are not being prepared adequately for what they plan to do after graduation. These same seniors agree that adequate preparation can only be accomplished through an increased vocational or occupational guidance program and by providing more courses in vocational education.

*It was concluded in the study that senior girls who rank in the top third of the graduating class are most likely to receive the kind of education they would like and the most help in planning what they would like to do after graduation from high school than any other group of students.

*Parents of eighth grade students and high school graduates were in agreement with high school seniors that the high schools are not adequately preparing high school youth to select a vocation and that additional courses in vocational education should be provided.

*On the basis of past history, at least 25% of the youth who enter the first grade in Monroe County will never complete high school and parents overwhelmingly agree that expansion of the vocational education curriculum would motivate students to stay in school.

*Parents and graduates have indicated a desire to attend evening classes if they were available to improve their own occupational competencies.

*The survey verified that approximately one half of the parents of 8th grade students who are heads of household work outside of Monroe County and that over one half of the high school graduates are either working outside of Monroe County or those who are presently in school do not plan to return to work in Monroe County. Therefore, it is concluded that vocational programs should be developed that will meet employment needs on a broad regional basis.

ASSESSMENT OF VOCATIONAL EDUCATION NEEDS INDICATES:

*It was verified that the public schools are offering 85 class periods of employment preparation classes and that the need is for 299 class periods; therefore, an additional 214 vocational class periods or 36 programs of studies are needed to meet the needs of high school youth. It is also important to note that this total does not include the vocational education needs of the parochial school students.

THE GENERAL ECONOMY INDICATES:

*The general economy and business climate of Monroe County appear to be in favorable position for supporting a strengthened and expanded vocational education program. Businesses and industries, farm managers and parents indicated they would support this program through county-wide financing.

CHAPTER 11

RECOMMENDATIONS AND PROPOSED PROGRAM

The Executive and Advisory Committees recommend for the immediate consideration of the Monroe County Intermediate School District Board of Education:

1. A general endorsement of the findings of the study.

2. Approval of the recommendations of the study.

3. Appointment of the Executive Advisory Board called for in the proposed program.

4. Implement the recommendations as soon as possible.

RECOMMENDATIONS FOR ACTION

1. That an area vocational education center or centers be constructed, equipped and staffed in Monroe County Intermediate School District to provide a comprehensive educational program to prepare youth and adults for entry employment in Agriculture, Business, Retailing, Home Economics (wage-earning occupations), Industrial and Personal Service occupations.

These facilities should be designed for the 11th and 12th grade student and adults who need skill training or retraining. The facilities should also be made available to all public and parochial secondary students residing within the Monroe County Intermediate School District.

2. That a sufficient millage levy to allow for maintenance and operation, and approval to borrow money and issue bonds for the construction and equipment of said facility and programs be submitted to the electorate of Monroe County Intermediate School District.

PROPOSED PROGRAM

The following proposal was unanimously recommended by the school superintendents of Monroe County Intermediate School District to be presented to the electorate no later than June of 1967:

A County-Wide Plan
For Vocational Education

Description

All constituent districts in the Intermediate School District of Monroe County enter into a long-term contract to provide vocational education for all students. The location and number of area vocational centers is to be determined by an Executive Advisory Board. Students would attend half day at the vocational center and half day at the home school. At the home school the student would take his general education and extra curricular activities and then take his skill classes at the vocational center. Students would graduate from the home school and receive a certificate from the vocational center.

Outstanding Features of Area Vocational Center

1. Students should receive excellent skill training.

2. Because of a broader tax base we would equalize vocational education opportunities throughout the county.

3. There would be enough students to offer a wide range of programs.

4. Students would retain their identity, receive their academic subjects

and enter into extra-curricular activities with the home school.

5. Local districts would continue to receive state aid based on student membership.

6. Students would have excellent facilities and equipment to work with.

7. We could employ instructors who are vocationally certified and specialist in their teaching area.

8. Students would most likely have a keener interest in vocational education.

9. Vocational centers would be located at population centers regardless of school district boundaries and therefore could more adequately meet community needs.

10. Parochial students could be served on a shared-time basis.

11. Vocational education could be offered to all students with various levels of abilities.

12. Students would be encouraged to continue at the Community College technical program.

13. Programs would be offered to update and retrain adults.

14. Programs would be offered to serve the employment needs of youth who have dropped out of school.

15. Short-term special federally supported programs could be operated within the facility.

16. A thorough testing and counseling would be provided for all students from vocationally-qualified instructors.

17. A project of this nature would be eligible for federal and state monies for construction, equipment and instruction.

Organization for Administration

The Monroe County Intermediate School District Board of Education will enter into a contractual agreement with a constituent school district to operate the vocational facilities. Provisions will be made in the contractual agreement that policy shall be recommended to the contracting district by an Executive Advisory Board composed of school administrators, members of boards of education, and representatives of business, industry and labor, representing all participating K-12 school districts. This Advisory Board shall be appointed by the Board of Education of the Intermediate School District.

CHART 12

RECOMMENDED ORGANIZATION FOR AREA VOCATIONAL CENTER

Legislation and Finance

The following legislation was recently passed in Michigan to facilitate the development of area vocational centers:

Public Act 114 (H.B. 3432) permits an intermediate school district in the State of Michigan to refer the question of the adoption of Sections 307A to 324A of the School Code of 1955 to the school electors of an intermediate school district which are designed to encourage the establishment and contracting for the operation of an area Vocational-technical education program. This act also permits an intermediate school district to borrow money and issue bonds for area vocational-technical facilities if approved by a majority vote of the registered school tax electors at the annual or special election. The intermediate district may not issue bonds for an amount greater than 1.5 percent of a total assessed valuation of a district. A bonded indebtedness shall not exceed a period of 30 years.

After the approval by a majority vote of the registered school tax electors and designation by the office of Vocational Education, Michigan Department of Education, as an area center, the project would be eligible for funds under the Vocational Education Act of 1963 at the rate of 50% for construction, 50% for equipment and 25% for instruction. It is possible that additional funds may be obtained from the Elementary and Secondary Education Act of 1965, Manpower Development and Training Act, Economic Opportunity Act and National Defense Education Act for special phases of the project qualifying under these acts.

GENERAL RECOMMENDATIONS

1. The area cooperative occupational education program that was established in the spring of 1966 be continued and administered through the area vocational education center.

2. Exploratory program and courses related to vocational education should be provided by the local high school for students in grades 7 through 10.

3. Vocational guidance should receive increased attention and start on the junior high school level.

4. Each student should be encouraged to utilize his interests and abilities through educational opportunities to his maximum potential. Students at the high school level should be given more help and an opportunity to select a curriculum, either academic, vocational or a combination, to prepare them for the changing world of work. Perhaps a more realistic curriculum should be a balance of academic and vocational so that the need of each student, society and industry would be served better.

5. Programs of instruction in special education should be developed at the vocational center which would accommodate the educational underachievers and educable socially-competent youth. The program of instruction would be developed at the skill level of the learner, recognizing the learner's limitations. In many instances, the students enrolled in this program have not found school work a meaningful experience, thus a major objective of this program might be to ignite the"spark of learning" through vocational-personal counseling and vocational exploration.

APPENDIX A

Monroe County Intermediate
School District
110 East First Street
Monroe, Michigan

January 4, 1966

Monroe County Business and Industries
Monroe County, Michigan

Gentlemen:

I am sure you will agree that it is in the best interest of the Monroe business community to have a labor market of well-prepared, highly-skilled workers. The Monroe County Intermediate School Board and the constituent school districts have taken a step toward insuring such a market. The board has authorized a comprehensive study of vocational, technical and adult education for Monroe County. The survey is similar to 34 others being conducted in the State of Michigan. This study is important to you and to us. It will help you, by enabling us to do a better job serving your firm and other business in the city, by providing us with information about the future needs for trained personnel in the Monroe County Area.

The primary objectives of the study are:

1. To identify and evaluate what is now being done
2. To identify what needs to be done
3. To evaluate pertinent data gathered from business and industry
4. To make recommendations to help the local boards of education formulate plans for better technical, vocational and adult programs in our schools and community.

Your organization has been selected as one of those to participate in the survey. We need your help in supplying the information called for in the survey forms for business and industry.

The forms are enclosed. We are requesting that you complete the survey forms in detail and return them in the enclosed envelope. The care and thoroughness with which this form is completed will be a vital factor in the successful completion of a comprehensive survey; as a sampling technique is used, it is imperative almost 100% cooperation is received in order to obtain significant results. All information will be treated with confidence and no firm will be referred to by name. We will appreciate very much your cooperation in this important project.

Very truly yours,

Al Mallory, Vocational Consultant
Monroe County Intermediate School District

Vocational-Technical Education Survey

Business and Industry Survey

Introduction: The Boards of Education, the administrators of the local school districts in Monroe County and the Community College are cooperating to gather information and opinions from employers in Monroe County that will be used to improve vocational-technical education programs for employment-bound youth.

You can help us by completing this questionnaire as completely as possible. This information is vitally important for the training of your future employees.

The data gathered will be used for statistical analysis only; your firm will not be identified in the published reports. Please return this questionnaire completed at once in the enclosed stamped, self-addressed envelope.

Your cooperation in this study is appreciated.

PART I General Information

1. Firm Name _____

2. _____Total number of people employed by firm.

3. Please check the space opposite the description which best identifies the activities of your firm. Check more than one if necessary.

____ 01. Agricultural Services
____ 02. Advertising
____ 03. Banking and Finance
____ 04. Communications

PART III--Employer Opinion and Practice

1. Recalling the employing practices of your firm for the past five-year period, which one of the following statements best describes your evaluation of young persons who have applied for entry jobs with your organization?

____(1) We have employed a number of young non-high-school graduates, and we have found they can perform satisfactorily in the following jobs: (specify)

_____

_____

____(2) We have employed a number of young non-high-school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.

____(3) We have found young non-high-school graduates unsatisfactory for the following reasons:_____

_____

_____

____(4) Most young high-school graduates who apply seem reasonably well prepared for entry employment, and we have employed them as openings have occurred.

____(5) We have employed a number of young high-school graduates but find they need a considerable amount of additional education and training before they can perform satisfactorily.

____(6) We have found it inadvisable to employ young high-school graduates, except for unskilled jobs.

____(7) The nature of most of the entry jobs in our firm is such that young high-school graduates are virtually unemployable, because of a lack of occupational training.

2. To what extent do existing educational facilities in the Monroe Area meet the occupational and training needs of your company or firm?

____(1) Very well ____(2) Fairly well ____(3) Poorly

3. The type of instruction, equipment and buildings needed for vocational-technical training is costly. In your opinion would this be more easily accomplished by: (check one)

____(1) County-wide financing
____(2) Local school district financing
____(3) Multiple school district financing

4. Would you and your firm be interested in participating in discussions or further study of plans for improving occupational education and training at high school and post-high school levels in the Monroe Area?

____(1) Yes ____(2) No

5. Is there a formally organized training program in your company or firm?

____(1) Yes ____(2) No

6. If "yes", check each type of program you now operate on a formal basis:

____(1) Apprenticeship
____(2) Supervision
____(3) Technician
____(4) Plant management
____(5) Executive development
____ Other (write in below)
____(6) _____
____(7) _____

7. If new or expanded vocational-technical curriculums or courses were to be offered in high schools, which curriculums or courses would you recommend which would be of value to prospective employees of your firm?

_____

_____

_____

_____

8. Please add any comments which you, or other officials of your firm may wish to make about the improvement of education and training opportunities in the Monroe Area. Include your suggestions as to the kind and level of educational programs which should be provided. (Example: automotive mechanics, H.S.; automotive technician, Community College)

Vocational-Technical Education Survey

Survey of Farm Labor Needs

Introduction: The Boards of Education, the administrators of the local school districts in Monroe County and the Community College are cooperating to gather information and opinions from employers in Monroe County that will be used to improve vocational-technical education programs for employment-bound youth.

You can help us by completing this questionnaire as completely as possible. This information is vitally important for the training of your future employees.

The data gathered will be used for statistical analysis only; your farm will not be identified in the published reports. Please return this questionnaire completed at once in the enclosed stamped, self-addressed envelope.

Your cooperation in this study is appreciated.

---

1. Please check the space that best identifies the size of your farm (acres).

   1. _____(0 - 150)
   2. _____(150 - 250)
   3. _____(250 - 400)
   4. _____(over 400)

2. Kind of farming done:

Crops	(Acres)	Livestock	(Head)

3. How many full-time man equivalents work on your farm? (express in tenths - example; 1.0 for yourself if full time, 0.5 for family member if 1/2 time, etc.)

   1. Self _____
   2. Family _____
   3. Hired _____
   4. Total _____

4. Would you hire additional help if available and dependable and at a reasonable wage? Yes ____ No ____ If "yes":

Kind of Work	Number of Workers Needed	Full Time or Part Time	Kind of Skill Needed

5. If present help left, would you fill the vacancy? Yes ____ No ____

6. Farm operator by age:

1. Under 25 ____	3. 36 - 45 ____	5. 56 - 64 _____
2. 26 - 35 ____	4. 46 - 55 ____	6. 65 or over ____

7. How many years of agricultural education has the farm operator had in

   1. High school _____
   2. Adult education classes _____
   3. College _____

8. Do the existing educational programs in the Monroe County Area meet the agricultural training needs for your farm?

   _____1. Yes _____2. No

9. Are existing facilities adequate: _____1. Yes _____2. No

10. The type of instruction, equipment and buildings needed for vocational-technical training is costly. In your opinion would this be more easily accomplished by: (check one)

    _____1. County-wide financing
    _____2. Local school district financing
    _____3. Multiple school district financing

11. Would you be interested in participating in discussions or further study of plans for improving agricultural education and training at high school and post-high school levels in the Monroe Area?

    _____1. Yes _____2. No _____3. Undecided

    If yes, would you please give your name_____

12. What is your estimated annual need for employees during the next five years?

    1. Part-time_____ Type of Work _____
    _____
    _____

    2. Full-time_____ Type of Work _____
    _____
    _____

13. General comments: (Add any comments which you may wish to make about the improvement of agricultural education that could be of benefit to either yourself or your employees. Include your suggestions as to the subject knowledge or skills and level of education programs.)

Information Sheet for High School Seniors

READ THIS BEFORE YOU BEGIN:

A study is underway aimed at improving vocational education opportunities in this area. You can help, too, by answering each of the questions which follow.

This is not a test. The answers you give will not affect your grades. Neither your teachers nor your classmates will see your answers. DO NOT SIGN YOUR NAME.

For the most part you simply check the questions that apply to you. Please answer all questions as completely as possible.

---

1. Sex (check one)
   _____1. Boy _____2. Girl

2. Which of the following best describes your high school program of study? (check one)
   _____1. Commercial or business education
   _____2. College or university preparatory
   _____3. Shop or industrial arts
   _____4. Agriculture
   _____5. Homemaking or home economics
   _____6. General
   _____7. Other (write in)_____

3. To the best of your knowledge, where do you rank in your graduating class? (check one)
   _____1. Top third _____2. Middle third _____3. Lower third

4. How long have you lived in this school district? (check one)
   _____1. Less than a year _____3. 3 to 5 years _____5. Over 10 years
   _____2. 1 to 2 years _____4. 6 to 10 years

5. How well do you think your high school is preparing you for what you plan to do after graduation? (check one)
   _____1. Providing just what is needed.
   _____2. Very well in some ways but in other ways preparation is not adequate.
   _____3. Fairly well but not offering the kind of training I would like.
   _____4. Poorly

6. How do you think the high school could prepare you better? (check all that apply)
   _____1. Provide more vocational or occupational guidance.
   _____2. Provide more courses in vocational education.
   _____3. Other (write in)_____
   _____

7. List one job which would be your first preference to be doing ten years from now. (write in)

_____

8. How much help have you received in high school in deciding what you plan to do after graduation? (check one)
   _____1. A lot of help, all you need.
   _____2. Considerable help but you could have used more.
   _____3. Some help but not very much.
   _____4. Little or no help.

9. How do you think your parents feel about what you do after you graduate from high school? (check one)
   _____1. Want me to work and learn a trade.
   _____2. Want me to take a two-year technical program. (Community College level)
   _____3. Would like me to take a 4-year college program.
   _____4. They don't care or are undecided.

10. Do you have a part-time job during school? (check one) ____ Yes ____ No

11. If we were to expand the types of vocational training that will be available to high school students, what kinds of courses would you like to see taught? (check as many as you like)

____1. Air conditioning & refrigeration	____14. Foundry
____2. Appliance repair	____15. Landscape
____3. Auto body and fender	____16. Nursery
____4. Auto mechanic	____17. Nurse's aide
____5. Business machines	____18. Plumbing & pipe fitting
____6. Cosmetology	____19. Practical nurse
____7. Data processing	____20. Printing
____8. Electrician	____21. Retail & Sales
____9. Cabinet maker	____22. Welding
____10. Carpenter	____23. Waiter & waitress
____11. Cook, commercial	____24. Work attitudes
____12. Electronics	____25. Other (write in) _____
____13. Machine trades	____26. _____

12. Do you plan to attend college or a university? (check one)
   ____1. No ____3. Probably so ____5. Don't know
   ____2. Probably not ____4. Yes

NOTE: Answer the following question <u>ONLY</u> if your future plans include "<u>NO</u>", "<u>PROBABLY NOT</u>" or "<u>DON'T KNOW</u>" as indicated in Question 12. (If you answered, "Yes", or "Probably so", to Question 12, skip this entire section and do not answer.)

13. Which of the following types of training or education interest you most? (check one)
   _____1. Paid apprenticeship as a helper to learn a trade.
   _____2. On-the-job training with a company or industrial firm.
   _____3. Correspondence study.
   _____4. Post-graduate high school work in high school at night.
   _____5. Adult education classes.
   _____6. Military service or training.
   _____7. Other (write in) _____

14. What is the most important reason why you do not plan to go to college? (check one)

_____1. Want to work and make money.
_____2. Can't afford it.
_____3. Parents don't want me to.
_____4. Can be just as successful without going to college.
_____5. Waste of time.
_____6. Couldn't make good enough grades.
_____7. Want to get married.
_____8. Tired of school.
_____9. Other (write in)_____

Graduate Follow-up Questionnaire

Introduction: The purpose of this questionnaire is to gather information and opinions from high school graduates about long-range plans for education and training. The information and opinions obtained will become a part of an area study now being conducted.

You can aid in this study by completing this brief questionnaire for the committee. Answering these questions will only take a few minutes of your time: do it NOW, please. Your story is important. So won't you please fill out the information schedule and mail it promptly. The return envelope is already addressed and stamped for your convenience. Responses are confidential and will be used for statistical purposes only.

Answer only if question applies to you.

1. Where are you living at the present time? (check one)
   _____1. In Monroe County
   _____2. In Wayne County
   _____3. In Lucas County, Ohio
   _____4. Other (write in)_____

2. Check program of study followed in high school. (check one)
   _____1. General
   _____2. Vocational
   _____3. Commercial
   _____4. College Prep

3. To the best of your knowledge, what was your academic rank in your high school graduating class? (check one)
   _____1. Top Third _____2. Middle Third _____3. Lower Third

4. What type of further training or education have you received since graduating from high school? (check all that apply)
   _____1. No additional training or schooling
   _____2. On-the-job training at a place where I was employed
   _____3. Business college
   _____4. Trade or technical school
   _____5. College or university
   _____6. Adult education course at a local high school
   _____7. Military service school
   _____8. Apprenticeship
   _____9. Other (write in)_____

5. Are you going to college at the present time? (check one)
   _____1. Yes, full-time _____2. Yes, part-time _____3. No

6. If you had made a vocational choice on graduation from high school, are you now engaged in this type of work at present? (check one)
   _____1. Yes _____2. No _____3. No choice at that time

7. Is your present work related to any vocational-type courses you took in high school?
   _____1. Yes _____2. No _____3. Didn't take any vocational courses

8. Do you feel that your high school had a sufficient number of vocational courses available for the employment-bound student?

_____1. Yes _____2. No _____3. Don't know

9. Would you have taken more of these vocational type courses had they been offered?

_____1. Yes _____2. No _____3. Don't know

10. Are you presently interested in taking more training of a vocational nature? (check one)

_____1. Yes _____2. No

11. If yes, and if we were to expand the types of vocational training that will be available, what kinds of courses would you like to see taught? (check as many as you like)

____1. Air conditioning & refrigeration
____2. Appliance repair
____3. Auto body and fender
____4. Auto mechanic
____5. Business machines
____6. Cosmetology
____7. Data processing
____8. Electrician
____9. Cabinet maker
____10. Carpenter
____11. Cook, commercial
____12. Electronics
____13. Machine trades
____14. Foundry
____15. Landscape
____16. Nursery
____17. Nurse's aide
____18. Plumbing & pipe fitting
____19. Practical nurse
____20. Printing
____21. Retail & sales
____22. Welding
____23. Waiter & waitress
____24. Work attitudes
____25. Other (write in)_____
____26. _____

12. In which of the following types of training or education would you be most interested? (check all that apply)

____1. Work for several years as a paid apprentice (helper) to learn a trade.
____2. Take post-graduate high school work in the high school at night.
____3. Enter military service for training.
____4. On-the-job training with a company or industrial firm.
____5. Correspondence study.
____6. Attend adult education classes.
____7. Enrollment in a community college on a part-time basis.
____8. None of the above.
____9. Other (write in)_____

13. If you were a student just entering high school and if you had a choice, what type of program would you pursue?

____1. Academic-college bound program of study
____2. Vocational-employment bound program of study
____3. Combination of both

14. If you are now working, is this the field of work you want to stay in?

_____1. Yes _____2. No _____3. Undecided

If yes, what kind of work?_____

15. In what county are you working?

_____1. In Monroe County
_____2. In Wayne County
_____3. In Lucas County, Ohio
_____4. Other (write in)_____

16. If you were (or are) a parent today, would (will) you encourage your children to follow a program of study for the employment-bound student? (assuming adequate facilities were available and if your child shows an interest in and seems suited for this particular kind of program)

_____1. Yes _____2. No _____3. Undecided

17. If you are presently in school or in training, do you plan to return and work in Monroe County?

_____1. Yes _____2. No _____3. Undecided

If yes, what kind of work?_____

Vocational-Technical Education Survey

School Facilities

Introduction: Monroe County Intermediate School District is engaged in a study of vocational-technical needs in Monroe County. The primary purpose of this study is to provide information upon which a comprehensive and coordinated plan can be developed for vocational-technical education and implementation of that plan.

The purpose of this questionnaire is to gather information concerning vocational education programs and facilities in Monroe County. The results will be used for statistical analysis in reports to be published in conjunction with the Systematic Study of Vocational-Technical Education Needs.

School District _____ Building _____

APPENDIX B

VOCATIONAL SURVEY

Committee #1
Manpower Needs

Suggested Working Outline

Purpose:

To survey all business, industry, service, and agriculture occupations to find existing and projected employment needs and their attitudes concerning present and proposed vocational-technical education programs.

Procedure:

The basic tool of the committee will be a questionnaire. This instrument should identify:

a. Employers by principle product or service and by number of persons employed.

b. The employer's present and anticipated employment by occupational classification.

c. Availability and future outlook of entry jobs for school drop-outs, high school graduates, and for persons possessing one or more years of technical training past high school.

d. Present training programs conducted by the employer.

e. Employer interest and the practicality of using the schools for employee re-training needs.

The survey should also determine opinions relative to:

a. The adequacy of occupational preparation of persons seeking entry employment today.

b. The anticipated need for specific occupational skills.

c. The relative value of various school programs and subjects as preparation for employment.

d. The desirability of an area vocational-technical school as contrasted with strengthened programs within the comprehensive high school.

Nature of the Report:

The committee should prepare its report with the assistance of the survey director and such other help as it deems necessary. All sources of data, projections, charts, and graphs should be carefully noted. The reports will be duplicated and distributed to the Policy Committee of the Monroe County Intermediate School District Area Survey for review. After approval by the

Citizens' Advisory Committee, the report will be published as a part of the complete Vocational-Technical Occupation Survey. This complete report will be given to the Superintendents in the county for implementation.

VOCATIONAL SURVEY

Committee #2
Existing & Proposed Programs

Suggested Working Outline

Purpose:

To survey all existing programs and facilities for vocational-technical education for high school and post high school. To recommend and report on means of upgrading, expanding, coordinating and providing guidance and placement services for these and any new programs.

Committee Procedure:

The committee's work to be divided into two phases to conduct a school program survey and to make specific program recommendations.

Survey - The basic tool of the committee will be a questionnaire used to identify the following:

a. All on-going vocational-technical programs in the area and adult education programs.

b. The capacity and utilization of facilities.

c. The kind, amount, and condition of equipment.

d. Teacher preparation, certification, and availability.

e. The use of guidance, job placement, and follow-up techniques.

Program Recommendations - Thought should be given to individual, multi-district, and county programs and facilities to include high school students and advanced programs of one, two, or three years beyond the high school diploma. Direction for determining new programs in vocational-technical education needs will come from the following:

a. Survey results of Manpower Needs, Committee #1.

b. Survey results of Student, Parent and Graduate Opinions, Committee #3.

c. Survey results of Population Trends, Committee #5.

d. The study of available national, state, and regional labor trends and needs for job skills.

e. The study of vocational-technical education programs and practices developed elsewhere.

f. It is suggested that the committee prepare a complete program of courses which should provide adequate training for entry into an occupation or cluster of occupations available to high school graduates and post high school training.

Nature of the Report:

The committee shall prepare its report and recommendations with the assistance of the survey director and such other help as necessary. All sources of data, projections, charts, and graphs should be carefully noted. The reports will be duplicated and distributed to the Policy Committee of the Monroe County Intermediate School District Area Survey for review. After approval by the Citizen's Advisory Committee the report will be published as a part of the complete vocational-technical survey. This complete report will be given to the Superintendents in the county for implementation.

VOCATIONAL SURVEY

Committee #3
Student, Parent and Graduate

Suggested Working Outline

Purpose:

To survey and report on opinions and attitudes of parents of children now in school about long range plans for education and training. To report on feelings, attitudes, and opinions of high school graduates and high school seniors as to their needs for vocational-technical training and adequacy of present programs.

Procedure:

The basic tool of the committee will be several questionnaires which should identify:

a. Parents opinions and feelings of 8th grade students, future training necessary for their children, adequacy of present school programs, types of vocational-technical training needed, best way to finance programs, student travel to area programs.

b. Senior high school student present programs, future plans, attitudes towards vocational-technical programs, adequacy of school offerings, counseling and guidance, facilities, and other school services.

c. High school graduates of one, two or three years, high school program followed, adequacy of school offerings, counseling, facilities, other school services, present occupation or training, type of training would have taken if it was available in high school.

Nature of the Report:

The committee shall prepare its report and recommendations with the assistance of the survey director and such other help as necessary. All sources of data, projections, charts, and graphs should be carefully noted. The reports will be duplicated and distributed to the Policy Committee of the Monroe County Intermediate

School District Area Survey for review. After approval by the Citizen's Advisory Committee the report will be published as a part of the complete vocational-technical survey. This complete report will be given to the Superintendents in the county for implementation.

VOCATIONAL SURVEY

Committee #4
Financing and Administration of Programs

Suggested Working Outline

Purpose:

To report on methods of financing, organizing, and administering programs in vocational-technical education.

Procedure:

The committee should study and recommend solutions to the following specific problems:

a. A statement of philosophy of vocational-technical education suitable to the needs of the citizens of this area.

b. Method or methods of financing specific programs recommended by Committee #2 including facilities and equipment.

c. Development and placement of new and additional facilities.

d. New organizational patterns and possibilities suitable to the needs of this area, studying the limitations of existing school districts and state school codes.

e. Administering all programs of vocational-technical education on a county or multi-district basis.

Information for study may be gathered from other working committees, Department of Education, other state and area programs, Monroe County Regional Planning Commission, and other sources as necessary.

Nature of the Report:

The committee shall prepare its report and recommendations with the assistance of the survey director and such other help as necessary. All sources of data, projections, charts, and graphs should be carefully noted. The reports will be duplicated and distributed to the Policy Committee of the Monroe County Intermediate School District Area Survey for review. After approval by the Citizen's Advisory Committee the report will be published as a part of the complete vocational-technical survey. This complete report will be given to the Superintendents of the county for implementation.

VOCATIONAL SURVEY

Committee #5
Population - Publicizing

Suggested Working Outline

Purpose:

Prepare projected school enrollments report on population trends and characteristics significant to employment opportunities. Publicize the survey activities and publication of all final survey reports. This report will provide the foundation for the other survey reports and a large measure of the justification for the total survey recommendations.

Committee Procedure:

a. Prepare questionnaire requesting projected school enrollment information.

b. Prepare population forecasts for all county areas, using maps, charts, and graphs where necessary.

c. Publicize continuing activities of all citizens committee's work.

d. Write and make arrangements for final publication of all survey reports and recommendations.

Sources available:

Monroe County Regional Planning Commission
Intermediate School District of Monroe County
K thru 12 school districts
Michigan Employment Security Commission
City and Township Planning Boards
Detroit Edison Company
Consumers Power Company
Michigan Bell Telephone Company
General Telephone Company
Michigama Telephone Company
Greater Monroe Chamber of Commerce

The committee should examine all population studies and projections which it can obtain, extract significant data, and compile it into a comprehensive report. This report should indicate the lowest and highest projections and the committee's own projections with justification for these.

Nature of the Report:

The committee shall prepare its report and recommendations with the assistance of the survey director and such other help as necessary. All sources of data, projections, charts, and graphs should be carefully noted. The reports will be duplicated and distributed to the Policy Committee of the Monroe County Intermediate School District Area Survey for review. After approval by the Citizen's Advisory Committee the report will be published as a part of the complete vocational-technical survey. This complete report will be given to the Superintendents in the county for implementation.

*OCCUPATIONAL SURVEYS; *LABOR FORCE; INDIVIDUAL CHARACTERISTICS; *JOB APPLICANTS; POPULATION TRENDS; EMPLOYMENT TRENDS; *LOW INCOME COUNTIES; RURAL AREAS; *EMPLOYMENT SERVICES
BURNETT COUNTY; WISCONSIN

Temporary employment office services were made available to a remote, rural low-income area to provide employment counseling and placement assistance, to determine manpower and economic resources, and to assist in planning a program of economic development. Data from U.S. Census tables and Unemployment Compensation tables, 1940 to 1960, indicate: (1) a population decline of 19 percent, (2) a labor force decline of 24 percent, (3) an agricultural employment decline of 30 percent, (4) an out-migration of over 50 percent of youth 15 to 25, (5) a median educational attainment of 8.8 grades, (6) an unemployment rate that exceeds 6 percent throughout the year and 9 percent in the winter, and (7) little industrial growth in the last three years. Information from 600 Employment Service applicants indicates: (1) 60 percent were high school graduates or above, (2) 67 percent were between 14 and 44 years of age, (3) 67 percent were unemployed, (4) 87 percent earned less than $3,000 during the last year, (5) 24 percent would commute 30 miles daily, and 79 percent 20 miles daily for work, and (6) the lower the skill level the more willing the applicant was to commute or move. Employers expected an increased employment need of only 70 percent by 1969. Lack of qualified skilled persons was the basic problem of employers in hiring new employees. Recommendations include: (1) More local development groups should be organized, (2) Promotion of the recreation and tourist industry should be accelerated, and (3) The county in conjunction with nearby counties, should promote establishment of vocational training facilities. Statistical data on all applicants are given in the appendix. (EM)

FOREWORD

OBJECTIVES:

The study of the manpower resources of Burnett County was undertaken and accomplished under the Department of Labor's program of expanded services to smaller communities. The operation of this program in Wisconsin is designed to extend temporary employment office services to remote, rural low-income areas which are not contiguous to a major labor market area and are not now receiving the full-measure of easily accessible service from a permanent local employment service office. The objective of this temporary, but full-time service, is to promote both the economic welfare of the area and the vocational goals of individual residents. This is facilitated in cooperation with the Department of Agriculture's program of Rural Areas Development. The immediate objectives are:

1. To provide employment counseling and placement assistance to individuals for jobs within or outside the area being served.

2. To determine the current and potential manpower resources.

3. To assist local planning groups in evaluating the over-all economic resources of the area in relation to the manpower resources.

4. To encourage and assist those groups in planning a program of economic development.

SERVICES:

To achieve these objectives, the Wisconsin State Employment Service established a "Smaller Community Temporary Office" at Webster, Wisconsin. The mobile crew, a staff of experienced employment service counselors, was assigned five basic tasks:

1. To provide the full range of employment service facilities and service to residents and employers of the county.

2. To register and interview all applicants interested in employment and to assist them in locating suitable jobs.

3. To test and counsel all interested applicants in evaluating their occupational potential for specific fields of work.

4. To survey the employers of the county to determine both current and anticipated employment requirements of existing business and industry.

5. To cooperate with various federal, state, and local agencies and quasi-public organizations in the development of plans designed to improve and stabilize the economic welfare of the county and its residents.

REASONS FOR SELECTION:

Early in 1964 a decision was made to conduct the manpower survey in a five county area in northwestern Wisconsin over a period of the next two years. It was felt that an area approach would facilitate advance preparation and follow up. The Burnett County Agricultural Committee and the County Agricultural Agent requested the survey for the early fall and winter so as to insure the registration of more seasonal workers. Burnett County was selected for participation in the Smaller Community Program in view of this request and its declining population, labor force and farm employment as well as its status as a rural non-industrial county with a low median family income.

BACKGROUND:

This study represents a part of the total continuing effort by WSES personnel to widen their scope of service and assist the county in its total resource development effort. Employment service personnel are anxious to know of any value this contribution may make in the total resource effort. Employers and businessmen contemplating expansions or new plant locations are urged to critically evaluate this study as to its value to them in terms of manpower resources, and to communicate their comments to the Wisconsin State Employment Service.

This material should also be of interest to other groups sincerely interested in the welfare and future of Burnett County, since much of the detail here actually reflects upon the adequacy of services of local institutions in terms of the needs, desires and ambitions of the people. Groups and agencies who are unselfishly concerned with employment opportunity, vocational training, education, taxes, and welfare should find some items of use and interest in this publication.

ACKNOWEDGEMENTS:

We wish to thank the local employers for their assistance in providing certain data for this study. We thank the service groups and individuals who assisted in organizing and promoting the program and we thank the individual participants for their active participation and interest. Most important, we earnestly hope that the services rendered to individual applicants proves to be of value to them in their search for economic security.

III

LOCATION OF BURNETT COUNTY RELATIVE TO POPULATION AND TRADE CENTERS

MAJOR TRANSPORTATION ROUTES IN BURNETT COUNTY

SUGGESTIONS

It is very important that Burnett County maintain and strengthen the Technical Action Panel (TAP) organization to promote economic growth by encouraging growth of commercial enterprises, better farming and marketing procedures, more training and retraining facilities, improvement of community services and facilities, development of natural resources and utilization of Federal and State programs which benefit the county.

Some industrial development has occured in Burnett County as a result of local development groups who have encouraged it by making sites and funds available to assist industry to locate in the area and to expand. More such groups should be organized and their efforts coordinated because industrial growth in any section of the county benefits the entire county. There is an ample supply of labor both male and female, especially female, and future industrial development should try to utilize these women.

The large amount of forest land in the county should continue to be developed for marketing of forest products and for recreational use. A general up-grading of jobs connected with forest products harvest would encourage more persons to seek this kind of work and provide a better family living standard for those who would seek these jobs.

The county has done a fair job in the promotion of the recreation and tourist industry and must continue to do even more. Development of recreation areas on both private and county owned lands must be accelerated to accommodate the rapidly increasing number of outdoor minded tourists. More promotion of the excellent hunting and fishing is also necessary to the economy of the area. However, while the tourist and recreation industry adds many millions of dollars each year to the economy of the county it will provide, for the most part, seasonal employment of a comparatively low pay and skill level. These types of jobs are necessary to aid the low income farm families and to provide supplemental income for many others but do not attract the youth seeking permanent, lifetime work or the more skilled workers that now commute outside the area for work.

The county must try to obtain industrial development that will at least maintain present wage rates if not increase them or face a continued loss of the youth and skilled workers. They also must encourage industry that will employ many women at year round jobs and reasonable wages.

The county should promote the establishment of vocational training facilities in conjunction with nearby counties to train persons for existing jobs and for future industrial needs.

PART I

HISTORICAL DATA

PART I consists of sets of tables, charts and graphs which are designed to illustrate the trend of the population and labor force, age and educational levels, wage rates and unemployment rates. This material has been compiled from U.S. census tables, Unemployment Compensation Division Tables and various other sources. This section provides historical background material necessary to understand the manpower needs of the county.

Highlights of Part I

The Burnett County population has declined 19% from 1940 to 1960.

The county labor force has declined 24% from 1940 to 1960.

Both the male population and labor force participation have declined steadily since 1940.

Agricultural employment declined 30% from 1940 to 1960 while wholesale and retail trade and manufacturing have increased.

The county labor force is made up of a higher percentage of persons 14-17, 45-64 and over 65 than the state average and a resulting lower percentage in the 18-44 or prime productive years.

Over one-half of all the youth born, raised and educated in the county out-migrate between the ages 15 and 25 and thus never become tax supporting citizens of the county.

Burnett County ranks third highest in median age (35.9) and has 16% of its population over 65. With the 30% under 15 this makes 46% that is non-supporting or potentially non-supporting.

The educational level of attainment in Burnett County, of persons over 25 is low with only 30% having a high school education or higher. The median level of attainment is 8.8 years compared to 10.4 for the state.

The total employed labor force has declined by 15% from 1950 to 1960. Farm laborers declined 64% while operatives and private household. workers have increased to help take up the slack.

The unemployment rate has been above 6% for the past several years and even exceeds 9% during the winter months.

Unemployment Compensation (U.C.) covered employment has remained stable for the past three years which indicates little industrial growth.

Wages in Unemployment Compensation covered industry $37 a week lower than the state average and nearly $30 weekly lower than for Douglas County. This provides increased incentive for out-migration of the labor force.

Population Trend

The population trend in Burnett County has followed the same downward trend that is characteristic of most rural Wisconsin counties. The decline in agricultural employment and the lack of increased industrial or other employment has resulted in the necessity for many of the new entrants into the labor force each year having to leave the area to find employment. Many of the more mature workers and heads of families have also found it necessary to leave the area either because of the loss of a farm job or because of pressure of the increased cost of living. The decline in population from 1940 to 1960 amounts to 19% and has continued since 1960 at an estimated rate of 2% per year. Male population has declined from 54.4% of the total in 1940 to 49.4% in 1963. The fact that most men are responsible for family support undoubtedly caused this greater decline among males.

Labor Force Trend

The total civilian labor force of Burnett County has declined about 24% from 1940 to 1960 and about 1% from 1960 to 1964. While non-agricultural employment has increased by 4.5% between 1960 and 1964, and has helped stabilize the labor force, the agricultural employment continues to drop. Female participation in the labor force has increased steadily from 13% in 1940 to 24% in 1960 and this has helped somewhat to offset the decline of men in the labor force.

Industrial Make-up of the Labor Force

As was pointed out previously agricultural employment has declined steadily since 1940 when it accounted for 62% of the labor force. In 1960 it was reduced to 32% and by 1964 to 29% of the labor force. Fortunately manufacturing employment has increased from 7% in 1940 to 17% in 1960 and wholesale and retail trade from 8% to 14% in this same period.

Chart B

Industrial Make-up of the Labor Force

Age & Sex Make-up of the Labor Force

The civilian labor force of Burnett County is composed of a larger percentage of persons over 65 than average. This age group makes up 12% of the labor force whereas in the state as a whole only 5% is over 65. The county has a slightly higher percentage of the labor force under 17 and also between 45 and 64. However the 18-24 age group and the 25-34 age group shows considerably less participation than for the state. This means that the cream of the youth are out-migrating by the time they reach the normal working age of 18 and are lost to the county until the later years of their life.

Table 4

Labor Force by Sex and Age Group for
Burnett County and Wisconsin 1960

65 +	325	54	397	12	55,236	22,568	77,804	5

Population Trend of a Selected Age Group 1930 to 1960

In order to get a clearer picture of the population trend the age group 0-5 years old, residing in the county, in 1930 was traced through the 1940-1950-1960 census years. This group which was 0-5 years old in 1930 increased by 18% by the time they were 10-15 years old in 1940. From 1940 to 1950 they decreased by 56% and decreased again 18% from 1950 until 1960 when they were then 30-34 years of age. This means that despite an influx of persons from 1930 until 1940 the population of this group has declined by over one-half since 1930. In a check of census figures on persons born since 1930 we find this same out-migration exists and in fact is increasing with each succeeding generation. Thus after supporting these people and financing their education through taxes we find over one-half of them never become tax payers in Burnett County.

Graph B

Loss of Population by Sex of a Selected Age Group
From 1930 to 1960

Median Age of Burnett County Population

Burnett County has the highest median age in the four county area and over six years higher than the state average. Only two counties in the state, Marquette and Vilas, have a higher median age. In 1930 Burnett County ranked one of the lowest in the state but the out-migration of the many young adults has pushed the median age up at an ever increasing rate.

Table 5

Median Age of Burnett County, the State, and Surrounding Counties 1930-1960

	1930	1940	1950	1960
State	27.3	29.8	31.0	29.4
Burnett	25.1	27.5	32.4	35.9
Polk	29.1	24.7	31.4	32.9
Washburn	27.2	24.8	30.9	34.2
Douglas	27.5	26.1	32.4	32.0

Non-Supporting Population

Non-supporting population is defined as those persons under 15 years of age who must depend on the adult population for support and those over 65 who currently depend upon the younger generation for support or who might need support if their present employment situation should change. This over 65 group re-represents primarily a potential threat of support while the under 15 is a current need. Burnett County with over 16% of its population over 65 and nearly 30% under 15 thus has almost one-half of its total population either non-supporting or potentially non-supporting. This large percentage of non-supporting population does not take into account the unknown number of persons between 15 and 65 who because of physical or other reasons are also non-supporting.

Table 6

Non-Supporting Population Ages 0-15 and 65 +

	1940	1950	1960
Wisconsin Population	3,137,587	3,434,575	3,951,777

Over 65	989	1,138	1,484
Percent of Total	36.2	40.6	45.7

Educational Level of Attainment

The educational level of attainment for Burnett County is lower than for any of the surrounding counties and the state average. The male level runs considerably lower than the female level and is also the lowest in this area of the state. Only 30% of the persons over 25 years of age have graduated from high school and over 21% have not graduated from 8th grade. This indicates that education beyond the elementary grades has not been encouraged to any extent in the past. In 1960 the census showed nearly 100% attending school through high school but very few going on to college or junior college. This means that training or jobs must be provided for most of the high school graduates each year.

Table 7

Educational Level of Attainment of Persons Over 25 Years

Douglas	2,612	1,297	5,784	5,409	6,926	2,152	1,352	10.5

Employment by Occupational Group

The total employed labor force has declined over 15% from 1950 to 1960 and has continued to decline at about the same rate since 1960. Farm occupations have declined the greatest amount which reflects the decline in agriculture as a major industry. General laboring occupations have also declined as have managerial occupations. There has been a considerable increase in operatives, clerical and private household workers as well as professional and technical workers. Many of these jobs reflect a growing resort industry and an increased number of summer homes resulting in the need for more professional services as well as private home service workers. Some industrial growth accounts for the increase in operatives and craftsmen.

U. C. Covered Employment by Industry

Unemployment Compensation covered employment has doubled since 1950, however most of this occurred between 1955 and 1960 when a change in the Wisconsin U. C. Laws increased coverage. Since 1960 the increase has been only slight. Manufacturing increased by about 27% while service industries declined by 40% and contract construction dropped to only one person. This stability of U. C. covered employment indicates that there has been very little increase in employment by industries or businesses employing over four persons.

Average Weekly U. C. Covered Wage

Weekly wage rates of persons employed in U. C. covered industry in Burnett County are consistently higher than the surrounding non-metropolitan counties. Only Douglas County with the metropolitan area of Superior ranks higher in this area of the state. However Burnett County wages are still over $37 a week lower than the state average and $30 a week lower than Douglas County. This discrepancy is another factor in the out-migration of the Burnett County labor force.

Table 10

Unemployment Rate

The annual rate of unemployment in Burnett County has exceeded both the state and national rates for a number of years. Several years the rate for Burnett County has been nearly double that of the state. Even when unemployment is at its seasonal low during the summer when tourism, food processing and construction are at their peak, it still far exceeds the state year round average. The graph on the next page illustrates how unemployment reached a peak of over 9% in January and February of 1964 and a low point of about 5% in August and September of 1963. This high rate of unemployment is one of the primary reasons for out-migration of the labor force.

Table 11

Annual Rates of Unemployment

Year	Burnett	Wisconsin	U. S.
1963	6.4	4.0	5.7
1962	6.4	4.1	5.6
1961	7.2	5.2	6.7
1960	7.0	4.1	5.6
1959	7.5	3.4	5.5
1958	8.9	5.4	6.8

Graph C

Unemployment Rates from January 1963
to April 1964

PART II

APPLICANT SURVEY

Part II consists of Tables, Charts, and Graphs illustrating the information obtained from the applicants who registered with the Mobile Survey Team, separated into four categories according to the type of information received, as follows:

Section A Characteristics of applicants
Section B Availability of applicants
Section C Mobility of applicants
Section D Job Potential of applicants

The Smaller Community Mobile Team of the Wisconsin State Employment Service started operations in Burnett County on August 25, 1964. The Team composed of a manager and four interviewer - counselors and a clerk maintained an office in the County Office Building at Webster with intinerant offices open for one week in each village or community center in the county. They operated continually from August 25, until October 8, registering all applicants and administering the General Aptitude Test Battery and counseling persons without prior work or recent work history to determine their potential. During October and November the team returned to Polk County to register and test the high school seniors. On December 10, the team returned to Burnett County and operated the office as well as registering and testing the high school seniors until operations were closed on January 22, 1965. A total of 156 high school seniors and 444 other persons registered with the team during its stay in Burnett County.

Highlights of the Applicant Survey

A total of 600 applicants or 19% of the estimated 1964 work registered during the survey.

Fifty-nine percent of the applicants were male.

One hundred fifty-six or 26% of the applicants were high school seniors who graduated in June 1964.

Over 67% of the applicants were between 14 and 44 and only 1.5% were over 65.

Sixty-seven percent of the applicants were unemployed or students with 41% being unemployed.

Eighty-seven percent of the applicants earned less than $3,000 the past year and 50% worked less than 18 weeks.

Fifty percent of the applicants did not have sufficient work experience to be classified as other than entry workers.

Nearly fifty-six percent of the applicants were married.

The educational level of attainment of the applicants was good with 60% being high school graduates or above.

Fifty-nine percent of the applicants wanted either any or full time work.

Only 26 persons would accept year round farm work and only 7 would take seasonal farm work away from the local area.

Forty-three percent of the applicants would move out of the area permanently for work and 46.7% would commute by the week or month.

Twenty-four percent would commute over 30 miles daily for work and 79% would commute up to 20 miles.

Married persons are the most willing to commute longer distances and less willing to move than all other persons.

The 14-19 age group shows the most willingness to move while the 20-44 age group shows a willingness to commute farthest for work.

The lower the skill level the more willing the applicants were to move and to commute longer distances for work.

279 applicants were administered the General Aptitude Test Battery (GATB) and their scores are related to specific jobs in Table 27.

Section A Characteristics of Applicants

Total Applicants by Sex and Age Group

A total of 600 applicants registered with the team during the survey or about 19% of the total estimated work force for 1964. Fifty-nine percent of the applicants were Male and over 67% were between 14 and 44. 156 or 26% were high school seniors. Table No. 17 at the end of this section gives a complete break out of all the characteristics of the high school seniors which are included in all the other tables. Special note should be taken of the high percentage, 37%, of applicants between 20 and 44 years of age. This is an indication of the desire for work among the people in the prime employment age group. This age group represents the highest potential for training and job change adjustment excluding the young recent high school graduates with little or no work experience or family responsibilities.

Table 12

Total Applicants by Sex and Age Group

Age Group	Number			Per Cent		
	Total	Male	Female	Total	Male	Female
Total	600	353	247	100.0	59.0	41.0
14-19	183	107	76	30.5	17.8	12.7
20-44	222	127	95	37.0	21.0	16.0
45-54	114	63	51	19.0	10.5	8.5

65 +	9	6	3	1.5	1.0	.5

Employment Status of Applicants

The chart below depicts the percentage of applicants that were employed, unemployed, underemployed, and students. (cont.)

Chart C

When estimating the available work force based on current employment status we find that 75% or 449 persons were unemployed, students, or working at less than full-time or skill level. This compares to about 250 reported as unemployed and available by the Department of Labor. This means that the unemployment rate instead of being about 9% of the work force is actually nearly 14%.

Table 13

Employment Status of Applicants

Age Group	Employment Status				
	Employed	Unemployed	Underemployed		High School Seniors
			Skill	Hours	
Total	151	246	15	32	156
Male	110	128	12	16	87

20-44	26	57	2	10	0
45-54	12	33	1	5	0
55-64	2	19	0	1	0
65 +	1	2	0	0	0

Income Earned and Weeks Worked the Past Year

Chart D

The number of weeks worked and the income earned in the past year gives some indications concerning the availability of the applicants. A check of Table 14 shows that nearly 50% or 267 applicants worked less than 18 weeks the past year and 47% earned less than $499. It should also be noted that 87% or 524 applicants earned less than $3,000. The 192 employed between 36 and 52 weeks the past year compares very closely with the 198 who were underemployed or employed at the time of the survey. This would probably indicate that the 151 currently fully employed also are employed nearly full-time leaving the other 449 available for full-time employment in the event of industrial expansion.

Table 14

Income Earned and Weeks Worked Past Year

			Income Earned						
Weeks Worked	Total	Per cent	0 499	500 999	1000 1999	2000 2999	3000 4999	5000 5999	6000 +
None	114	19.0	113	0	0	1	0	0	0
1-18	185	30.8	154	22	7	2	0	0	0
19-35	109	18.2	14	21	38	24	10	1	1
36-52	192	32.0	3	18	53	54	44	15	5
Total	600	100.0	284	61	98	81	54	16	6
Per Cent	100.0	XXXXX	47.3	10.2	16.3	13.5	9.0	2.7	1.0

Industrial Experience by Industry and Occupation

The chart below indicates that a large number of the applicants have had some industrial experience while the chart on the next page shows that much of this experience is so limited that nearly one-half the applicants could not be assigned full occupational codes. Almost one-half the applicants have worked to some extent either in manufacturing, agriculture or construction. Since most of the high school seniors are classified as entry workers and also have no applicable industrial experience this means that nearly all of the adult applicants have some experience. The large number of young untrained workers plus the many mature workers with only limited experience provides the area with a good source of manpower for future industrial growth.

Chart E

Industrial Experience by Industry

Chart F

Industrial Experience by Occupational Group

Marital Status

The marital status of the applicants to a certain degree determines the need for either job development in the local area or a move out of the area. Table 15 below shows that 180 men between 14 and 65 are married. This means that they are heads of households and must support a family, so need full time work and adequate pay. In addition there were 157 single males between 14 and 65 who will need to find adequate work before they can support a family. There were also 75 young girls under 20, most of whom will need to be self supporting. Added to all the above groups for a grand total of 433 are 21 widows, widowers and divorcees. This means that almost three-fourths of the applicants need good jobs or they must leave the area.

Table 15

Marital Status of Applicants

Age Group	Marital Status					
	Married		Single		Other	
	Male	Female	Male	Female	Male	Female
Total	185	150	158	86	10	11
14-19	2	1	105	75	0	0
20-44	86	80	37	10	4	5
45-54	53	49	8	1	2	1
55-64	39	20	7	0	4	2
65+	5	0	1	0	0	3

Educational Level of Attainment

Graph D

The educational level of attainment of the applicants was considerably above the median level for the total population of Burnett County. The graph above shows the percentage of applicants that reached various levels of educational attainment. It should be noted that almost 60% of the applicants were high school graduates or higher while only 26% of the total applicants were high school seniors tallied as graduates. This means that one-third of the applicants not in school had graduated from high school. Table 16 below indicates that most of the persons with a low educational level have service occupations or do not have any particular occupation and are classified as entry workers. Many of these entry workers could be trained as semiskilled or skilled workers in the event an industry should locate in the area.

Table 16

Educational Attainment Level by Occupational Group

Occupational Group	Total	Educational Attainment						
		Under 6 Grade	6-7-8 Grade	8th Grad.	Some H.S.	H.S. Grad.	Some College	College Graduate

Total	600	5	16	132	92	310	37	8

High School Seniors

Table 17 below depicts the characteristics of the 156 high school seniors included in the previous tables. Of particular significance are the weeks worked, income earned and industrial experience portions of the table since all the seniors were between 14 and 19 years of age, single and tallied as high school graduates. To determine the adult portion of any previous table one has only to deduct the number of students in the particular category in the table below from the totals in the desired table.

Table 17

Characteristics of High School Seniors

Section B Availability of Applicants

Availability for Work

The number of applicants that will accept any work or full-time work is a good measure of the available work force. The available later usually represents persons available after school graduation and housewives who can work as soon as their young children reach school age. This group is usually available if an industry locates in an area and they can secure reasonable paying jobs. In Burnett County 356 applicants or 59% would be available for full-time work if any industry were to need them. An additional 104 persons would be available later, many of them probably are ready now. Since the survey was conducted during the resort off-season some of the 90 persons available for seasonal work probably work in summer resorts or in tourist affiliated industry during the summer so do not want other work. Only 30 applicants said they would not be available while 151 were fully employed which is an indication of the number of persons employed out of the county who want work locally as well as farmers who want full-time work off the farm. The large number of men available for any or full-time work points out the great need for industrial growth. The 156 high school seniors are included in the availability tables and in a separate availability table on page 27.

Chart G

Table 18

Availability	Total	Male	Female
Full time	133	87	46
Any	223	130	93
Later Date	104	57	47
Part Time	20	4	16
Seasonal	90	56	34
None	30	19	11

Seasonal Availability

In the previous section it was noted that ninety persons wanted seasonal work. The table on the next page shows seasonal availability of the entire 600 applicants while the graph indicates the season of work preferred by those persons who specified wanting seasonal work only. Most of these persons prefer seasonal summer work probably in tourist affiliated businesses. Those preferring winter jobs usually are construction people who's normal full-time job does not continue during the winter months. It is unusual to find more men looking for summer work than women particularily in this resort country, however, a check with table 24 shows that most of the seasonal workers are among the high school seniors and probably represent many young persons planning on further schooling to begin in the fall after a summer of employment.

Table 19

Chart H

Season Available

Availability by Weeks Worked Past Year

Table 20 below indicates availability for work by sex and by weeks worked the past year. It should be noted that of the 30 applicants not available 21 had worked from 36 to 52 weeks while another six had not worked the past year. These six applicants were high school seniors who were planning to go into the military service or had jobs set for them after graduation. Most of those available later had less than 18 weeks of work and these again represented the high school seniors who would be available after June 1965. By comparing table 24 (High School Seniors) with the table below it is apparent that most of the adult applicants want any work or full-time work so would provide an adequate source of manpower for industrial growth.

Table 20

Availability for Work by Sex and Weeks Worked Past Year

Total	600	353	247	30	133	223	20	90	104

Availability for Farm Work

Chart I

Availability for Farm Work

The chart above depicts the rather little interest in farm work that is held by most Burnett County persons seeking work. Only 26 persons would accept year round farm work out of the 600 total registered and seven of these were high school seniors planning on working on the home farm. Local seasonal farm work was somewhat more attractive with 34 persons being interested, however, eleven of these were students primarily interested in work before college. Many of the persons expressing interest in farm work were farmers operating their own farms or tenant farmers. The only persons with any true availability for farm work were those that would leave the area for non-local farm work. This situation regarding farm work availability is a typical situation probably because of the rather low pay and long hours required of farm workers.

Table 21

Availability for Farm Work

		Non Local	Yes	7	7	0
			No	593	346	247

Availability by Place of Residence

Table 22 below lists the availability of the applicants for work by place of residence. As might be expected those areas of good farm and industry produced a smaller percentage of people with unlimited availability or availability for full-time work than did the areas of poor farms and little industry.

Table 22

Availability by Place of Residence

Availability by Occupational Group

An analysis of availability of applicants by occupation reveals that the skilled and semiskilled persons have the least availability while the entry workers have the greatest. Clerical and Sales persons are highest in Part Time work which reflects the housewives who work part time in local offices or as sales clerks. Most agricultural and forestry people prefer any or full-time work. The persons not available for work are so small in number in Burnett County that this should present no problem for someone looking for additional manpower.

Table 23

Availability by Occupational Group

Occupational Group	Availability

Total	30	133	223	20	90	104

High School Seniors

Table 24 presents the availability of the 156 high school seniors included in the survey. Those available at a later date have become available or have received work since the time of the survey. The large number available for seasonal work reflects those students who intend to go on to further education or training in the fall of 1965. This figure is probably high and some of these persons are now currently seeking full-time work because of changes in plans. As was stated previously the seven persons interested in year round farm work planned on working at home. There was no one available, for hire to do farm work year round, among the students.

Section C Mobility of Applicants

Mobility as used in this report refers to the geographic concept and is reflected in three ways.

1. The willingness of an applicant to move permantly for work.
2. The willingness of an applicant to move temporarily for work.
3. The distance an applicant will commute or travel one-way for work.

Mobility is influenced by several factors such as home ownership, marital status, age of children, educational attainment, employment status, skill level, sex, and age ties to family and friends and lack of knowledge of the job opportunities out of the immediate area. Five of the factors (marital status, educational attainment, age, occupational skill and place of residence) were studied for this report and the results are shown in tables, charts and graphs on the following pages and in the appendix.

Mobility of Applicants

The willingness of Burnett County applicants to move out of the area for work was above average for the fifteen counties studied to date. More people were willing to leave the area on a temporary basis, such as by the week or month, than would move out permanently for work. This large number of persons willing to move temporarily reflects the number of persons that currently work some distance out of the area and of necessity must commute by the week or month.

Chart J

Shaded Portion Denotes High School Seniors

The chart below showing distance willing to commute for work indicates that only 24% will travel over 30 miles daily for work. This again is reflection of the large number of people who prefer or must live away from home during the week because their place of employment is too far away for daily commuting. The fact that 43% would travel up to thirty miles daily for work and that 79% would travel up to twenty miles means that any industrial expansion within Burnett County would be assured of an adequate labor supply.

Chart K

Willingness to Commute Daily for Work

Mobility by Marital Status

Graph E. depicts the willingness of people to move for work, by marital status. As might be expected single people show a much greater willingness to move than do married people while widows, divorcees etc., are about equally divided on the subject. A complete table appears in the appendix.

Graph E

Willingness to Move by Marital Status

Graph F

Willingness to Commute Daily by Marital Status

Married persons show the greatest willingness to commute with 46% being willing to commute up to 30 miles daily for work and 81% willing to travel up to 20 miles. The single and other groups have a slightly less willingness to commute. The inability of many high school seniors to commute lowers somewhat the favorable response by single persons.

Mobility by Age Group

The graph at the top of the next page presents a typical picture of mobility by age groups. The young 14-19 age group shows 90% willing to move out of the area permanently for work. This means that most of the youth will in fact leave the area if jobs cannot be found locally. The older persons with homes and friends are reluctant to leave the area but do show a greater willingness to commute longer distances as shown in Graph H. Persons over 65 have very little mobility. The 20-44 age group has about one-third willing to move for work and about the same number willing to commute over 30 miles daily for work. Almost all of this age group will commute up to 20 miles and since they comprise over one-third of the total applicants they provide an excellent source of potential workers for a local industry.

Graph G

Willingness to Move by Age Group

Graph H

Willingness to Commute by Age Group

Mobility by Educational Attainment

As a general rule mobility increases in proportion to the increase in educational attainment, however in Burnett County we find that those applicants with only a 6-7-8th grade education are almost as willing to move as the high school graduates and more willing than the other high school and college groups. The relatively low mobility of the college graduate group can probably be attributed to the fact that there has been little job opportunity for them in the area so those that would move have already done so. Since over one half of the applicants are in the High School graduate group and they show 62% willingness to move it is obvious that many of these applicants will leave the area if job opportunities are not created for them.

The graph on the next page shows the great willingness of all but the up to 6th grade group to commute up to 20 miles daily for work. Again the 6-7-8th grade group shows good mobility with almost 90% being willing to travel up to 20 miles daily for work. The college graduates show exceptionally high willingness to commute. This can be attributed to the higher saleries generally paid professional people. Most of the 6-7-8th grade group were unskilled or entry workers who would commute in order to get higher wages and year round employment.

Graph I

Willingness to move by

Educational Attainment

Graph J

Willingness to Commute by Educational Attainment

Mobility by Occupational Group

Mobility is affected by the type of occupation and skill level of the individual. As can be seen in the graph on the next page the Clerical and Sales and Service occupations, which as a rule are filled by women in the rural areas, show little willingness to move. Professional people generally have a higher educational level thus more mobility. The semiskilled and unskilled persons are seeking to better themselves by moving to places of greater opportunity as are the entry workers who have no trade or skill. Agricultural workers and farmers are leaving the farms in ever increasing number and will move out of the area, if necessary, to find work. There exists a number of relatively good paying skilled jobs in Burnett County which accounts for the little interest in movement on the part of the skilled applicants.

Graph K

Willingness to Move by Occupational Group

Mobility by Occupational Group (cont.)

Table 25 below shows the comparatively large number of applicants in the skilled and semiskilled occupations that would commute over 30 miles daily for work. These people could provide a good nucleus for any industry that would locate in Burnett County or nearby. The large number of persons in all but the Clerical and Sales group and the Service group that would travel up to 20 miles for work means that an industry could locate in Burnett County and be assured of an adequate labor supply. The Clerical and Sales and Service groups generally do not show much willingness to commute because the jobs are of low pay, often seasonal and many times filled by the older workers or by housewives to supplement their family income.

Table 25

Willingness to Commute by Occupational Group

Occupational Group	Miles Willing to Travel One-Way Daily for Work				
	30 Plus	Up to 30	Up to 20	Up to 10	None

Semiskilled	27	13	19	1	1
Unskilled	16	4	18	4	3
Entry	44	64	103	46	31

High School Seniors

The table on the next page shows the general mobility of the high school seniors included in the survey. It should be noted that most of them would leave the county for work while only a small percent would commute over 30 miles. About three-fourths of the high school seniors would commute up to 20 miles for work which means that they would be available for work anywhere in Burnett County. Many of those who indicated no willingness to commute have done so because they did not have transportation available at the time of the survey. This situation would undoubtedly change if an industry were to locate in the area.

Table 26

Mobility of High School Seniors

			Total	Male	Female
Willingness to Move out of the Area	Permanent	Yes	148	84	64
		No	8	3	5
	Temporary	Yes	124	66	58
		No	32	21	11
Miles Willing to Commute one-way Daily for Work	None		23	11	12
	Up to 10		18	3	15
	Up to 20		59	36	23
	Up to 30		35	20	15
	30 Plus		21	17	4

Mobility by Place of Residence

The map on the next page indicates the total number of applicants from each township, village and surrounding county and their willingness to move either permanently or temporarily for work. This provides a good picture of the location in the county of the available potential labor supply.

Geographic Mobility by Place of Residence

SECTION D Job Potential of Applicants

All applicants were classified by primary occupation or occupations for which they possess skills or had recent work experience. Applicants without skills or recent work history or Entry applicants were encouraged to take the United States Employment Service General Aptitude Test Battery (GATB) to assist counselors in their evaluation of each individual's occupational potential. The results of this test combined with a counseling interview determined the occupational potential assigned to each applicant. This section provides charts and tables to present the primary occupation and highest occupational potential of all applicants. In addition the scores of all tested applicants were compared with specific aptitude scores for various occupations to provide a job potential inventory table. A complete breakdown of the primary occupation and occupational potential of applicants can be found in Tables I and II of the appendix.

Primary Occupations of Applicants

Each of the 600 applicants was classified according to his primary occupation. If they had insufficient work experience to qualify them for a full occupational code they were classified as entry applicants. Two hundred and eighty-eight applicants or 48 percent came under this classification. The chart on the next page indicates the percent of applicants that come under each of the primary occupational groups. It should be noted that only the Professional and Managerial group and the Entry group varied significantly in percentage of the total. The low percentage of Professional and Managerial applicants is a normal occurrence because most of these persons are employed at a good wage level and need not look for work. The Entry group represents the young people and persons without experience who have difficulty finding jobs consequently it is a rather large percent of the total.

Chart L

Summary of Primary Occupations

Occupational Potential of Applicants

All applicants were given an occupational code that reflected their present occupation, occupation for which they possessed some skill and occupations for which they possessed potential and interest. As a result some applicants received more than one occupational potential code with the result that the 600 applicants were assigned 1060 codes. The chart below depicts the percentage distribution of the occupational potential in each of the six occupational groups while Table II of the appendix presents a complete breakdown.

Chart M

Occupational Potential of Applicants

Job Potential Inventory

In addition to using the General Aptitude Test Battery (GATB) as an aid in counseling and to determine occupational potential it is also useful in determining specific job potential of the applicants. The GATB consists of twelve tests designed to measure nine aptitudes. The aptitudes are defined as follows:

G - (Intelligence) General learning ability.
V - (Verbal Aptitude) Ability to understand meanings of words and ideas associated with them and to use them effectively.
N - (Numerical Aptitude) Ability to perform arithmetic operations quickly and accurately.
S - (Spatial Aptitude) Ability to comprehend forms in space and understand relationships of plane and solid objects - often described as the ability to visualize.
P - (Form Perception) Ability to perceive pertinent detail in objects or in pictorial or graphic material - to make visual comparisons and discriminations, and to see slight differences in shapes and shadings of figures, etc.
Q - (Clerical Perception) Ability to perceive pertinent detail in verbal or tabular material.
K - (Motor Coordination) Ability to coordinate eyes and hands or fingers rapidly and accurately in making precise movements with speed.
F - (Finger Dexterity) - Ability to move the fingers, and manipulate small objects with the fingers, rapidly or accurately.
M - (Manual Dexterity) Ability to move the hands easily and skillfully - to work with the hands in placing and turning motions.

A total of 279 applicants were administered the GATB and their scores have been compared with the Specific Aptitude Test Battery (SATB) scores listed in the U.S. Department of Labor catalogue of test scores for various specific jobs. These SATB's are frequently used by the Employment Service as a tool to screen applicants for jobs or training. The results of the comparisons appear in Table 27. This table when combined with any known industry staffing pattern can provide answers to the availability of manpower to a potential employer.

Table 27

Specific Job Potential of Applicants Tested

Specific Jobs	Total	Male	Female
Automobile Mechanic	192	104	88
Automobile - Body Repairman	184	105	79

PART III

Employer Survey

Part III consists of tables, charts and graphs illustrating the results of the Employer Survey. The Employer Survey was carried out in Burnett County at the same time as the Applicant Survey. Two members of the team contacted all employers that employed four or more employees in Unemployment Compensation covered employment. Each employer contacted was asked to complete a survey form which asked that he list all his employees by occupation, sex, age and wages paid. He was also asked to project his employment for 1966 and 1969 by occupation. Each employer was also asked a series of questions as follows:

1. Have you had any hiring difficulty the past year and for what reason?
2. What type of training and for what occupations do you feel it is necessary?
3. Do you currently have any job openings?
4. What are the reasons for the location of your business here?
5. How many persons do you hire from outside Burnett County? Where do they reside?
6. What industry would best aid your business?

Highlights of the Employer Survey

Twenty employers were surveyed employing 523 persons or 15 percent of the estimated 1964 labor force.

Slightly over 65 percent of the persons employed by the surveyed employers were employed in manufacturing.

Ninety percent of those employed in manufacturing were men.

The employment increase expected by all surveyed employers totaled only 19 persons by 1966 and 70 persons by 1969.

Manufacturing accounted for an increase of 17 persons by 1966 and 62 persons by 1969.

The skilled and semiskilled occupations accounted for an increase of 16 persons by 1966 and 63 persons by 1969.

Fifty-eight percent of the employed workers were under 45 years of age. Less than 17 percent of the employed workers were women.

Assembly workers and machine operators accounted for the greatest anticipated increase by 1966 and 1969.

Most employers favor any type of new industry especially some type that would utililize the counties natural resources.

Most workers over 65 were owners, managers or part time workers so do not represent replacement potential.

Lack of qualified skilled persons represents the basic problem of employers in hiring new employees.

Wages paid clerical and unskilled workers is low while those of semiskilled and skilled are good considering the rural nature of the county.

More Burnett County workers are employed outside the county than outside residents employed within the county.

Most employers indicate a need for some type of vocational school training but the overall need would not justify the establishment of training except in cooperation with several other counties unless a specific need should develop due to industrial expansion.

Tourism, Raw Materials and Industrial Development assistance were all given as reason for locating in Burnett County.

Current and Anticipated Employment by Industry

A total of 25 employers were surveyed in Burnett County employing 523 persons or 15 percent of estimated 1964 labor force. Over 65 percent of the employed persons surveyed were in manufacturing and 90 percent of these were men. As might be expected a large percentage of the service industry workers were female and these accounted for almost 20 percent of the female work force surveyed. The increase in employment by 1966 and 1969 was very small as indicated in the following graph.

Current and Anticipated Employment

Table 27 below shows the current and anticipated employment by industry and the anticipated increases by 1966 and 1969. As can be seen only manufacturing shows any appreciable increase in the number to be employed. This small increase in employment can not hope to absorb the normal increase in labor force and additional industrial expansion must occur or many people will leave the area for work.

Table 27

Current and Anticipated Employment by Industry

Industrial Group	Current 1964			Anticipated Employment			
				1966		1969	
	Total	Male	Female	Total	Percent Increase Over 1964	Total	Percent Increase Over 1964
Total	523	435	88	542	3.6	593	13.4

Construction	---	---	---	---	---	---	---
Fin.-Ins.-Real Estate	18	7	11	18	---	18	---

Current and Anticipated Employment by Occupational Group

The current employment by occupation as shown in Table 28 below indicates that very few women are performing skilled or semiskilled jobs. Over 79 percent of all the women currently employed by the surveyed employers were in Clerical and Sales or Service occupations. This would indicate that there is a good opportunity for an industry which employs women to locate in the area. Primarily all the anticipated increase in employment by the industries currently located in the area was in the skilled and semiskilled occupations. This would indicate that training programs currently being conducted must be maintained and expanded to meet the needs of current industry. Industrial expansion must take place in order to take care of the large numbers of skilled, semiskilled and new job applicants that the applicant survey showed were looking for work.

Table 28

Current and Anticipated Employment by Occupational Group

Occupational Group	Current 1964 Employment			Anticipated Employment			
				1966		1969	
	Total	Male	Female	Total	Percent Increase Over 1964	Total	Percent Increase Over 1964
Total All Groups	523	435	88	542	3.6	593	13.4
Professional & Managerial	25	25	0	25	---	25	----
Clerical & Sales	80	35	45	83	2.5	85	6.3
Services	36	11	25	36	---	38	5.6
Agri.-Forest. Fishing	6	6	0	6	---	6	---
Skilled	110	104	6	118	6.3	148	33.3
Semiskilled	217	207	10	225	3.2	242	11.5
Unskilled	49	47	2	49	---	49	----

Age Distribution of Employed Workers

The graph below shows that the surveyed work force of Burnett County is fairly evenly divided between the under 45 and the 45 and over age groups. Only slightly over 2 percent are over 65. Nearly one-half the work force were men under 45 while women accounted for less than 17 percent and those under 45 only 9 percent. This would seem to indicate opportunity for industrial growth to utilize the female work force primarily the younger age groups.

Chart N

Percentage Age Distribution of Employed Workers

Table 29

Age Distribution of Employed Workers by Sex

	Total	Under 45	45-64 Years	65 Years and Over
Total	523	303	207	13
Male	435	256	168	11
Percent of Total	83.2	49.0	32.1	2.1
Female	88	47	39	2
Percent of Total	16.8	9.0	7.5	.3

Anticipated Employment by Specific Occupation

Nine of the Twenty-five employers surveyed indicated they would be increasing their employment by either 1966 or 1969. Table 30 indicates the anticipated increase by 1966 and 1969 for all the occupations in which increases were expected. It is significant that only two occupations show any amount of increase and these are both semiskilled or skilled factory occupations.

Table 30

Anticipated Increase by Specific Occupation

Occupation	Additional Employment By	
	1966	1969

Cabinet Maker	1	2
Carpenter	1	2
Service Station Attn.		1
Inspector		1
Cleaning Help		2

Occupations of Employed Workers 65 or Over

The 65 and over age group consisted of 13 workers or 2.4 percent of the surveyed work force. Of these workers 2 were owners or managers of businesses, 2 held part-time clerical jobs, 1 held a part-time semiskilled job. The full-time employed persons over 65 held 5 skilled jobs, 2 semiskilled and 1 laboring job. These last mentioned eight persons represent the only true potential for replacement by retirement. This means that new jobs must be created to absorb the young persons coming into the work force as well as the older workers who are seeking employment.

Employment Problems

Five of the employers surveyed indicated they had difficulty hiring workers in the past year. Only one reason was given and that was a lack of qualified skilled persons to fill the job openings. All the openings were at the skilled occupational level and most persons at this skill level can get higher wages by leaving the area. A general upgrading of wages for skilled workers, industrial expansion to utilize the semiskilled and unskilled and training programs to upgrade the skill level of the applicants is necessary to utilize the work force that is available in the county.

Current Wages of Surveyed Occupations

The table below indicates the highest and lowest wages paid for various occupations among the employers included in the survey. Not all employers indicated exact wages paid but enough information was gathered to make the wage range determinations. In general wages for clerical and unskilled occupation were very low while the semiskilled and skilled occupations were about the same or higher than those paid in other rural northern Wisconsin counties. The wages paid in Burnett County are enough lower than those paid in the more heavily industrialized areas that from the economic standpoint they favor industrial expansion.

Table 31

Current Wages in Surveyed Occupations

Occupation	Low	High
Bookkeeper	1.10	2.75
Sales Clerk	1.00	1.25
Office Clerk	1.25	1.65
Stock Clerk	1.25	1.75
Lineman	1.40	2.85
Truckdriver	1.50	1.75
Foreman	2.45	2.85
Machine Operator	1.25	2.25
Mechanic	1.25	2.05
Janitor and Cleaning Help	1.00	1.75
Laborer	.75	1.90

Employment of Out-of-County Residents

Of the 523 workers currently employed by the employers surveyed only 31 were out-of-county residents. The state of Minnesota supplied eight and the balance came from Polk County. No figures are available on the number of Burnett County residents working outside the county but it is known that the number is substantial. This trend needs to be reversed by increasing job opportunities within Burnett County.

Types of New Industry Favored by Employers

All the employers surveyed indicated that any new industry would be welcomed and would benefit the community if not their own business. The large amounts of forest and timber resources available would indicate the need for an industry that would utilize them and also provide additional employment.

Training Needs

Many of the employers surveyed indicated that additional training at the Technical or Vocational School level should be provided nearby. The possibility of combining with a nearby county to provide this type of school should be considered. Training would be desirable in several occupations as follows:

Carpenter	Office Procedures
Cabinetmaker	Shorthand
Mechanic	Bookkeeping
Machine Operator	Plumbing

In only one of the above listed occupations was there job potential to warrant setting up a training course in Burnett County and there is currently a course being given under the Area Redevelopment Act for that occupation. The training in the other occupations is just as necessary but do to the small needs of Burnett County it would not be practical to set up courses for less than a three or four county area.

Reasons for Locating in Burnett County

Most employers surveyed gave their reasons why they are located in Burnett County, Many of the small retail businesses gave as their reason the fact that the small communities are local trade areas for both the native residents as well as for the summer tourist trade. The resort business provides a big assist to the economy and in some cases is the primary reason why a business is located in the area.

Some of the industry is located in the county because of the source of raw materials. These include forest products as well as products from the farms. Other industries located in the area as a result of an adequate labor supply and assistance on the part of local Industrial Development groups either finacially or by providing facilities or both.

PART IV

APPENDIX

Part IV or the Appendix consists of a set of Tables providing detailed data on the primary occupations, total occupational potential, mobility and industrial experience of all applicants. These tables provided the background for the charts and graphs in Part 2.

APPENDIX

Following is an explanation which delineates the major occupational groups for entry classifications as used in Tables 1 and 2 of the appendix.

PROFESSIONAL, TECHNICAL AND MANAGERIAL WORK:

Persons having the qualifications necessary for entry into work requiring the capacity to acquire and apply special knowledges involved in artistic creation, entertainment, social service work, teaching, scientific study, research, engineering, law, business relations or management.

CLERICAL AND SALES WORK:

Persons having the qualifications necessary for entry into work involving recording, transcribing, composing, compiling, transmitting and systematizing written communications and records, computing or compiling mathematical or statistical data, or dealing with the public in business situations to effect sales, give information, or perform other commercial or administrative services.

SERVICE WORK:

Persons having the qualifications necessary for entry into work that involves ministering to the needs of others in preparing food, serving meals, caring for children and in other types of personal service activities.

AGRICULTURAL, MARINE AND FORESTRY WORK:

Persons having the qualifications necessary for entry into work involving the raising and harvesting of crops; the breeding, care, catching and hunting of fish and other animals; the handling of boats; the preservation of forest; the gathering of forest products and other related outdoor activities.

MECHANICAL WORK:

Persons having the qualifications necessary for entry into work in which the independent judgement of the worker determines the machine and manual operations to be performed in obtaining the proper form and quantity of material to be produced. Workers may be required to lay out work; to estimate quality, suitability, and needed quantities of materials; to make precise measurements; to read blueprints or other specifications; and to make necessary computations or mechanical adjustments to control or regulate processes.

MANUAL WORK:

Persons having the qualifications necessary for entry into work in which the form, quality and quantity of the work depend primarily on prescribed methods and on the performance of machines or equipment or on the use of hands or hand tools. Workers may be required to observe the operation of machines, feed mahcines and to perform other repetitive and physical tasks.

WASHBURN COUNTY; WISCONSIN

A "Smaller Community Temporary Office" was established at Spooner, Wisconsin, as part of a program to extend temporary employment office services to remote, rural low-income areas. Its basic tasks were (1) to provide full-range employment service facilities to the residents and employers, (2) to register and interview all applicants interested in employment, (3) to test and counsel applicants, (4) to survey employers, and (5) to cooperate with other governmental and public organizations in developing plans to improve and stabilize the economic welfare of the county. Washburn County was selected for this program on the basis of its declining population, labor force, and farm employment level as well as its rural, non-industrial status and low median family income. The median age of the county population was 34.2 as compared to 29.4 for Wisconsin. The population and labor force had declined 17.6 percent between 1940 and 1960. Agricultural employment declined from 36.4 percent in 1950 to 21.1 percent in 1960, and presently ranks 59th of 72 counties. Of the persons who registered with the employment office, 107 were fully employed, 57 were underemployed, 294 were unemployed, and 178 were high school seniors. Nearly 70 percent were inexperienced and were classified as entry applicants. Only one-half of the applicants were willing to move out of the area for work and 187 stated that they would commute 20 miles or more. The past annual earning for over 80 percent of the applicants was less than $3,000.00, and 55 percent had worked less than 18 weeks. Employers reported an increase of 76 positions for 1966 with only 54 openings at the time of the survey and additional openings anticipated by 1970. Of the 1,080 employees reported by 59 employers, only 17 were 65 or older. No agricultural or forestry occupations were surveyed. The appendix gives data on primary occupations, total occupational potential, mobility, and industrial experience of all applicants. (EM)

FOREWORD

OBJECTIVES:

The study of the manpower resources of Washburn County was undertaken and accomplished under the Department of Labor's program of expanded services to smaller communities. The operation of this program in Wisconsin is designed to extend temporary employment office services to remote, rural low-income areas which are not contiguous to a major labor market area and are not now receiving the full-measure of easily accessible service from a permanent local employment service office. The objective of this temporary, but full-time service, is to promote both the economic welfare of the area and the vocational goals of individual residents. This is facilitated in cooperation with the Department of Agriculture's program of Rural Areas Development. The immediate objectives are:

1. To provide employment counseling and placement assistance to individuals for jobs within or outside the area being served.

2. To determine the current and potential manpower resources.

3. To assist local planning groups in evaluating the over-all economic resources of the area in relation to the manpower resources.

4. To encourage and assist those groups in planning a program of economic development.

SERVICES:

To achieve these objectives, the Wisconsin State Employment Service established a "Smaller Community Temporary Office" at Spooner, Wisconsin. The mobile crew, a staff of experienced employment service counselors, was assigned five basic tasks:

1. To provide the full range of employment service facilities and service to residents and employers of the county.

2. To register and interview all applicants interested in employment and to assist them in locating suitable jobs.

3. To test and counsel all interested applicants in evaluating their occupational potential for specific fields of work.

4. To survey the employers of the county to determine both current and anticipated employment requirements of existing business and industry.

5. To cooperate with various federal, state, and local agencies and quasi-public organizations in the development of plans designed to improve and stabilize the economic welfare of the county and its residents.

REASONS FOR SELECTION:

Early in 1964 a decision was made to conduct the manpower survey in a five county area in northwestern Wisconsin over a period of the next two years. It was felt that an area approach would facilitate advance preparation and follow-up. The Washburn County Board Resource Development Committee and the County Resource Agent requested the survey for winter or early spring so as to insure the registration of more seasonal workers. Washburn County was selected for participation in the Smaller Community Program in view of this request and its declining population, labor force and farm employment as well as its status as a rural non-industrial county with a low median family income.

BACKGROUND:

This study represents a part of the total continuing effort by WSES personnel to widen their scope of service and assist the county in its total resource development effort. Employment service personnel are anxious to know of any value this contribution may make in the total resource effort. Employers and businessmen contemplating expansions or new plant locations are urged to critically evaluate this study as to its value to them in terms of manpower resources, and to communicate their comments to the Wisconsin State Employment Service.

This material should also be of interest to other groups sincerely interested in the welfare and future of Washburn County, since much of the detail here actually reflects upon the adequacy of services of local institutions in terms of the needs, desires and ambitions of the people. Groups and agencies who are unselfishly concerned with employment opportunity, vocational training, education, taxes, and welfare should find some items of use and interest in this publication.

ACKNOWLEDGEMENTS:

We wish to thank the local employers for their assistance in providing certain data for this study. We thank the service groups and individuals who assisted in organizing and promoting the program and we thank the individual participants for their active participation and interest. Most important, we earnestly hope that the services rendered to individual applicants proves to be of value to them in their search for economic security.

LOCATION OF WASHBURN COUNTY RELATIVE TO POPULATION AND TRADE CENTERS

MAJOR TRANSPORTATION ROUTES IN WASHBURN COUNTY

V

SUGGESTIONS

It is very important that Washburn County maintain and strengthen the Technical Action Panel (TAP) organization to promote economic growth by encouraging growth of commercial enterprises, better farming and marketing procedures, more training and retraining facilities, improvement of community services and facilities, development of natural resources and utilization of Federal and State programs which benefit the county.

Some industrial development has occurred in Washburn County and is continuing at the present time. Every effort should be made to assist local industry to prosper and expand as well as encouraging new industry to locate in the area. There is an ample supply of labor both male and female with various skills and potential to be trained for future industrial development.

The large amount of forest land in the county should continue to be developed for marketing of forest products and for recreational use. A general up-grading of jobs connected with forest products harvest would encourage more persons to seek this kind of work and provide a better family living standard for those who would seek these jobs.

The county has done a good job in the promotion of the recreation and tourist industry and must continue to do even more. Development of recreation areas on both private and county owned lands must be accelerated to accommodate the rapidly increasing number of outdoor minded tourists. More promotion of the excellent hunting and fishing is also necessary to the economy of the area. However, while the tourist and recreation industry adds many millions of dollars each year to the economy of the county it will provide, for the most part, seasonal employment of a comparatively low pay and skill level. These types of jobs are necessary to aid the low income farm families and to provide supplemental income for many others but do not attract the youth seeking permanent, lifetime work or the more skilled workers that now commute outside the area for work.

The county must try to obtain industrial development that will at least maintain present wage rates if not increase them or face a continued loss of the youth and skilled workers. They also must encourage industry that will employ many women at year round jobs and reasonable wages.

The county must proceed as rapidly as possible in aligning itself with a vocational district in order that training for existing jobs and future needs will not be delayed.

PART I

HISTORICAL DATA

Part I consists of a set of summary-type population, labor force, educational attainment, wage and employment statistics. These Tables, Charts and Graphs are designed to illustrate population and labor force changes, wages and income, educational attainment, employment and unemployment which should significantly affect county planning.

Highlights of Part One

The population of Washburn County has declined by 2,195 persons or 17.6 percent from 1940 to 1960 and is continuing this same rate of decline to the present time. Both the male and female population has declined however, the ratio has been about 2 men for each woman. The decline has occurred primarily in the 25 thru 44 age groups due to out-migration of primary wage earners.

The out-migration of 50 percent of a selected age group that was 10-14 years of age in 1940 by the time they were 20-24 years of age in 1950 and the loss of an additional 12 percent by 1960 means a great loss to the county in manpower as well as tax dollars used to educate these people.

The median age of the population in Washburn County is 34.2 compared to 29.4 for the state and 35.9 for other area counties.

The labor force of Washburn County has declined at about the same rate as the population since 1940 but there has been an increase in the number of women in the labor force as employment opportunities for them have increased.

Agricultural employment has declined from 36.4 percent of the labor force in 1950 to 21.1 percent in 1960. All other industry groups have gained slightly but the result has been a decline of about 10 percent in total labor force during this period.

Washburn County has a smaller percentage of persons under 15 years of age and larger percentage over 65 than the state as a whole and the over 65 group has been increasing at a much faster rate in Washburn County than in the state.

The educational attainment level of persons over 25 years of age in Washburn County is higher than for most rural northern Wisconsin counties but is still considerably below the state median.

Washburn County ranks 59th out of Wisconsin's 72 counties in median family income. Nearly 40 percent of all the families in Washburn County had incomes under $3,000 annually and 8 percent had incomes under $1,000.

Rural non-farm income in Washburn County is considerably below the state average while farm income is about the same as the state average.

Average weekly wages in U.C. covered manufacturing employment in Washburn County are lower than all other area counties and it ranks among the lowest three counties of the state.

There has been no growth in U.C. covered employment in the county since 1960 and in fact covered manufacturing employment has decreased.

The unemployment rate for Washburn County is higher than for both the state and U.S. rate for the past several years. The unemployment rate in Washburn County fluctuates greatly with the season of the year but even at its lowest point is still above the state average. The average number of unemployed has remained constant over the past six years and the rate has declined because of an increase in the total labor force.

Population Trend

The population of Washburn County has been on the decline since 1940 as indicated in Graph A and in Table 1. The decline from 1940 to 1950 was 831 persons, or less than seven percent, while from 1950 to 1960 it was 1364 persons or nearly 12 percent. The rate of decline is estimated to have continued with a loss of 751 more persons by 1963.

A shift in the sex make-up of the population from 45.9 percent female in 1930 to 49.1 percent in 1960 and to an estimated 50.9 percent in 1963 is characteristic of most rural northern Wisconsin counties and reflects the out-migration of many young men for work. Also of significance is the increase in the number of persons age 15 and under and over 45 and the decrease in those between 20 and 45 especially those between 25 and 44. This again reflects the lack of opportunity for the primary wage earner to earn an adequate living within Washburn County.

Out-migration of a Selected Age Group

To present a clearer picture of the loss of primary work force, a selected age group was traced from age 0-5 in 1930 to age 30-34 in 1960. This group numbered 1172 in 1930 and increased to 1248 by 1940 due to in-migration. From 1940 to 1950 the group suffered a loss of 50 percent or 624 persons. During this period the group reached the age of 20-24 years and should have begun their real contributions to the work force of the county. This loss of potential productive young workers after the county has borne the cost of rearing and educating them is a very serious problem and confronts most rural areas. The continued loss of these people even after they reach age 25 is indicated on the accompanying graph and though the rate of loss is less, it means an even greater loss of persons who probably have developed a trade or skill.

Graph B

Loss of a Selected Group by Sex 1930 to 1960*

Population Trend Compared to Surrounding Area

The population trend in Washburn County as compared to other counties in this area is given in the table below. While the state population has been increasing steadily the population of all the counties in this area has decreased since 1940. As a result of this trend the percent of the state population represented by Washburn County has decreased from four tenths of one percent in 1940 to two tenths of one percent in 1963 (est.). The population of the other counties in this area has decreased at about the same rate as that of Washburn County which emphasizes the need for an area approach to the problem.

Table 2

Washburn County Population Trend Compared to the State and Surrounding Counties*

Year	State	Washburn County	Percent of State	Douglas County	Burnett County	Sawyer County
1930	2,939,006	11,103	.4	47,119	10,233	8,878

Comparison of Age Groups in Washburn County and Surrounding Area

A comparison by age of Washburn County's population with surrounding counties shows the similarity which exists among rural northern Wisconsin counties. Washburn County has only a slightly higher percentage of persons in the 15 to 44 age group and a slightly less percentage in the over 65 age group than do the neighboring counties of Burnett and Sawyer. In a comparison with the state age breakdown however, Washburn County shows a much lower percentage of persons in the 15 through 44 age group and a higher percentage of persons in the 10-14 and the over 65 age groups. The overall result is that Washburn County has a median age of 34.2 while both Burnett and Sawyer Counties have a median age of 35.9 and the state a median age of 29.4. This again points up the loss of the most productive age group from this area to other areas of more industrial employment.

Distribution of the Labor Force by Age and Sex

The age distribution of the Washburn County labor force is very similar to the distribution of the population as discussed previously. There is a higher percentage of persons under 17 years of age and over 45 years of age and a correspondingly lower percentage of persons age 18 thru 44 than in the state labor force. The loss of this large mid-section of the county's labor force presents a serious problem to which all the county's residents must be alerted and an attempt be made to correct.

Table 4

Age and Sex Distribution of the Labor Force
1960 Census*

Age	Washburn County				State

* Bureau of the Census

Labor Force Trend

The labor force of Washburn County has been on the decline since 1940 as shown in the graph below. The decline from 1940 to 1960 was 825 persons or over 18 percent. This rate is almost identical to the rate of population decline over the same period.

As more employment opportunities have become available to women their participation in the labor force has increased. This increase has resulted in a gain from 14 percent participation in 1940 to nearly 29 percent participation in 1960. This trend can be expected to continue. New jobs will have to be created to take care of the demand or an increasing number of young, unmarried women will leave the area for employment.

Graph C

Labor Force Trend 1940 to 1960*

* Bureau of the Census

Labor Force Trend Compared to Surrounding Area

The labor force of Washburn County has declined at about the same rate (18.5%) as the other rural northern Wisconsin counties over the past twenty years. Douglas County with the metropolitan area of Duluth-Superior has shown a decline of only 11 percent during this same period. Barron County which has had considerable industrial development has shown an increase in the size of its labor force of five percent in the last 20 years. The total labor force for the state has gained by nearly 25 percent since 1940. The general loss of the labor force in the rural northern area counties again emphasizes the need for united action to stem the tide.

Table 5

Washburn County Labor Force Trend Compared to the State and Surrounding Counties*

Area	Labor Force			Percent Change		
	1940	1950	1960	1940-50	1950-60	1940-60
State	1,227,552	1,394,848	1,532,961	+13.6	+ 9.9	+24.9

Industrial Make-Up of the Labor Force

The charts on pages 10 and 11 compare the industrial make-up of the labor force in 1950 with 1960. As can be readily seen Agriculture has declined from 36 percent to 21 percent for a loss of 673 workers in the ten year period. This is a typical situation in America today and would not present as many problems if the total labor force was on the increase. All the other industry groups in Washburn County have shown a percentage gain as well as a slight numerical gain, but not sufficient to keep the total labor force from declining as indicated in table 5 above. The general low pay and long hours required in Agriculture has caused many farm workers to seek off-farm work. The increasing size of farms caused by mechanization and consolidation has forced many farm owners to leave farming and enter the labor market in other fields.

Non-Supporting Population

The non-supporting population is considered as the portion of the total population that is under 15 years of age and over 65 years of age. The persons under 15 years of age are rarely self-supporting because of educational demands and child labor laws, so are a continuing burden upon the economy of the county. This group does, however, provide the labor force of the future. Persons over 65 do contribute to the economy of the county but pose a potential burden if their means of support should fail. The percent of the total population that is non-supporting in Washburn County is nearly the same as for the state as a whole. However, in Washburn County only 30 percent of the population is under 15 and 14 percent is over 65 in contrast to 32 percent under 15 and 10 percent over 65 for the state as a whole. The table below shows the great increase in the number of persons over 65 from 1940 to 1960. This increase coupled with a decrease in all other age groups could present serious problems in the future.

Table 6

Non-Supporting Population
Age 0-14 and Over 65*

Area	1940		1950		1960

* Bureau of the Census

Educational Attainment

The educational level of attainment of the Washburn County population over 25 years of age is slightly higher than other rural northern Wisconsin counties. Washburn County has a larger percentage of persons with some college education or with college degrees than do most of the nearby counties. The large number of persons that have had only a 7th and 8th grade education or a few years of high school prevents the median years of education from rising much above the ninth grade level. However, with

(cont'd)

only 10 percent of the over 25 population having had less than seven years of schooling. Washburn County ranks better than other rural counties in this area of the State and should be in a good position to take advantage of training and retraining projects.

Table 7

Educational Attainment of Population over 25 Years of Age

1960 Census*

AREA	YEARS SCHOOL COMPLETED								
	TOTAL	NONE	UNDER 7	7 & 8TH GRADE	SOME H.S.	H.S. GRAD.	SOME COLLEGE	COLLEGE GRAD.	MEDIAN YEARS

Annual Family Income

Washburn County had a median family income in 1959 of $3,859 and ranked 59th out of the 72 counties. Eight percent of the 2,692 families in the county had annual incomes under $1,000 and another 30 percent had between one thousand and three thousand dollars income, Washburn County has no incorporated places over 2,500 population so is considered 100% rural. Almost one-third of the total population lives on farms but only one-half of the employed farm prople are employed in Agriculture. Income reported by farm families is very nearly the same as that reported by non-farm families in Washburn County and the state average for farm families. The rural non-farm income of Washburn County is comparatively much lower than for the state which points up the need to upgrade non-farm employment in Washburn County.

Table 8

Annual Family Income 1960 Census*

Annual Income	Number of Families	% of Total

9,000 and over	1.6	9.4	10.0	12.6

Average Weekly Wages

The average weekly wages in U.C. covered manufacturing employment in Washburn County are extremely low. The $62.42 per week average wage places Washburn County among the lowest three in the state for average weekly wages and only slightly more than one-half the state average of $121.59. Among all the surrounding counties only Sawyer County with an average weekly wage of $64.99 is anywhere near as low as Washburn County. Most manufacturing employment in Washburn County can be found in the lumber and wood products industries and these industries do not have a reputation for high wages. These industries have not been in a position to pay high wages and the outlook is not good for their position to change. The other counties in this area of the state have a broader industrial base with more employment in manufacturing of food products, machining and fabricated metal products which normally have higher wage levels.

Table 10

Comparison of Average Weekly Wages in U.C. Covered Manufacturing Employment in Washburn and Surrounding Counties*

* Wisconsin Unemployment Compensation Department

U.C. Covered Employment by Industry

One of the measures of industrial growth in an area is the growth in U.C. covered employment in that area. Table 11 on the next page gives a breakdown of U.C. covered employment by industry for various years from 1950 to 1964. The increase that occurred from 1955 to 1960 was caused by a revision of U.C. laws which increased the number of persons covered. As can be seen there has been little change since 1960. Covered manufacturing employment has declined slightly along with Contract Construction and Utilities while Retail Trade and Service industries have increased slightly. The overall stability of covered employment points up the stagnation which has set in as regards to industrial growth and the resulting lack of employment opportunity.

Table 11

U.C. COVERED EMPLOYMENT BY INDUSTRY

Services	15	34	102	99	116	111

Employment and Unemployment by Occupational Group

The number of employed persons in Washburn County declined by 413 or 10.8 percent from 1950 to 1960. This decline occurred principally in the Farm related occupations and in general laboring jobs. There were significant numerical increases in Clerical Workers, Service Workers and Private Household Workers. The table on the next page gives a complete breakdown of employment by occupation for the 1950 and 1960 census year and the percentage of change from 1950 to 1960. During this same decade the number of experienced unemployed rose by 20 persons or 9.5 percent. Farmers, Clerical Workers and Sales Workers were the only occupational groups to show a decline in unemployment in the same period. The increase in the number of government agencies has created a demand for Clerical Workers in recent years which in turn has reduced unemployment in this field. Most farmers that leave the farms today do so because they have found other employment so do not appear on the roles as unemployed farmers.

Table 12

Unemployment Rates

The unemployment rate for Washburn County has been considerably above the state and national average for at least the last seven years. It has improved slightly in recent years but this is caused by a slight increase in size of the labor force and not a significant reduction in the number of unemployed. The Graph at the bottom of the page indicates the seasonal fluctuations in unemployment that occur during the year. The large number of summer jobs in the resort industry and in seasonal food processing keeps the rate comparatively low during July, August, September and October. It should be noted, however, that the lowest rate achieved in 1963 was still above the state average.

Table 13

Unemployment Rates

Year	Washburn	Wisconsin	U.S.
1964	5.3	3.5	N.A.
1963	5.4	3.8	5.7

PART II

APPLICANT SURVEY

Part II consists of Tables, Charts and Graphs illustrating the information obtained from the applicants who registered with the Mobile Survey Team, separated into four categories according to the types of information received, as follows:

Section A Characteristics of the Applicants
Section B Availability of the Applicants
Section C Mobility of the Applicants
Section D Job Potential of the Applicants

The Smaller Communities Mobile Survey Team of the Wisconsin State Employment Service started operations in Washburn County on March 1, 1965. The team composed of one supervisor and four interviewer-counselors maintained an office in the City Hall at Spooner with itinerant offices open for one week in each of the villages and cities in Washburn County. They operated continually from March 1 until May 28 registering all applicants and administering the General Aptitude Test Battery (GATB) to all interested persons without prior work or recent work history to determine their potential. All area residents unemployed or employed less than full-time were encouraged to register with the team. As a result 638 residents of Washburn County registered and provided detailed information.

Highlights of the Applicant Survey

A total of 638 persons registered with the survey team in Washburn County. There were 178 high school seniors registered and 460 other persons or 12.3 percent of the estimated work force.

Fifty-one percent of the applicants were men and nearly one-third of the applicants were under 20 years of age.

Only 107 applicants or 17 percent were fully employed while 57 persons were underemployed. There were 294 unemployed applicants and 178 high school seniors.

Over 80 percent of the applicants earned less than $3000 in the past year and 55 percent of them worked less than 18 weeks.

Seventy-four percent of the applicants had at least some high school education and 57 percent were high school graduates or higher.

Fifty-two percent or 336 applicants were available for Unlimited or Full-Time Only employment with an additional 23 percent available at a later date.

Fifty-five persons desired seasonal work and 47 of these preferred summer employment.

Only 34 applicants would even consider farm work and none would leave the local area for farm work.

Over one-half of the applicants would move out of the area for work while only 187 would commute 20 miles or more one-way daily for work.

The under 20 age group was the most willing to move out of the area for work and the 20-44 age group was the most willing to commute over 20 miles one-way daily for work.

Single persons expressed the greatest willingness to move for work while the married persons would commute the farthest for work.

Skilled, Semiskilled and Unskilled applicants would commute the farthest for work.

Four hundred and forty-six applicants or nearly 70 percent were inexperienced or had no recent work history and are classified as Entry applicants.

Four hundred applicants were tested by the GATB to provide job potential information and to assist the counselors.

Section A Characteristics of the Applicants

Total Applicants by Sex and Age Group

A total of 460 applicants or 12.3 percent of the 1964 estimated work force of Washburn County in addition to 178 students registered with the team during the survey. Fifty-one percent of the applicants were men and about one-third of these were under 20 years of age. Slightly less than one-third of the total applicants were under 20 years of age with over one-third being between 20 and 44 years of age. About 28 percent of the applicants were currently in school at the time they registered. Only 64 applicants or 10 percent were over age 55 which means that ninety percent of the applicants have ten or more years of work force participation ahead of them.

Table 14

Total Applicants by Sex and Age Group

Age Group	Number			Percent		
	Total	Male	Female	Total	Male	Female
Total	638	325	313	100.0	51.1	48.9

55-64	55	31	24	8.6	4.9	3.7
65+	9	8	1	1.4	1.3	.1

Current Employment Status

To get a clearer picture of the number of applicants that would be available for industrial expansion the survey team determined each applicant's current employment status. Only 17 percent or 107 persons were fully employed while 9 percent or 57 persons were underemployed. An underemployed person is one who is working less than full-time or at a skill level below his present capabilities. The remaining 474 persons or 74 percent were either students or were unemployed. For the purposes of this survey all persons except, those fully employed represent a potential labor supply for industrial expansion. Since registration was on a voluntary basis, the 531 persons classified as available represent only a portion of the actual total that would be available in the event jobs should become available.

Table 15

Employment Status of all Applicants by Sex and Age

Age Group	Employed	Under Employed		Unemployed	Student
		Skill	Hours		
Total	109	24	33	294	178

55-64	2	1	1	20	0
65+	0	0	0	1	0

Weeks Worked and Income Earned the Past Year

The number of weeks worked and the income earned during the past year by the applicants gives a good picture of their employment and economic status. Over 38 percent of the applicants had no work experience during the past year and an additional 17 percent had less than 18 weeks of work for a total of 55 percent that either had no work or less than eighteen weeks of work in the past year. An almost identical percentage of 55 percent had less than $500 income in the same one-year period. Of great significance is the fact that only 18 percent or 116 of the 638 applicants earned over $3,000 in the past year. This means that 522 of the applicants had income less than the accepted minimum of $3,000 annually. All of the 178 high school students had less than 18 weeks of work and earned less than $500 during the past year. This group will of necessity have to increase their earnings considerably during the coming years.

Table 16 below shows the number of weeks worked and the income of all the 638 applicants. Charts 3 and 4 show the percentage distribution of the weeks worked and income earned.

Table 16

Income Earned and Weeks Worked Past Year by All Applicants

Weeks Worked	Total	Dollar Earnings						
		0-499	500-999	1000-1999	2000-2999	3000-4999	5000-5999	6000+

Chart 3

Weeks Worked

Chart 4

Income Earned

Shaded Portion Represents High School Seniors

Marital Status of the Applicants

The marital status of the applicants to some extent influences their necessity for finding jobs. Nearly all of the married male applicants must support families. Also most of the single applicants of both sexes must be self-supporting as are the widows, divorcees etc. All students were single so are included with the single applicants. The table below shows that of the 638 applicants 172 were married men, 245 were single men and women and 48 were widows, divorcees etc. This means that 466 persons that registered with the team probably need full-time work and adequate living wages. Some of the additional 172 married women who registered contribute to the family support so they also must secure work. Some form of industrial development must take place in the area to provide a living for all these people or they will of necessity move away.

Table 17

Marital Status of Applicants by Sex and Age Group

Age Group	Marital Status					
	Married		Single		Other	
	Male	Female	Male	Female	Male	Female

55-64	26	16	4	0	1	8
65+	7	1	1	0	0	0

Primary Occupations of the Applicants

The 638 applicants who registered with the survey team have been classified according to their primary occupations. If they had insufficient work experience to qualify them for a full occupational code they were classified as Entry workers. Nearly 70 percent or 446 persons lacked work experience so were classified as Entry workers. Only 25 persons or 3.9 percent were unskilled workers and only 8 persons were Agricultural or Forestry workers. Chart 5 on the next page shows the percentage distribution of the applicants for the various occupational groups. Table I of the Appendix gives a complete breakdown by specific occupation for each of the 638 applicants.

Chart 5

Summary of Primary Occupations

Educational Level of Attainment of the Applicants

The educational level of the applicants registered was fairly good with about 57 percent having at least a high school diploma. This compares to about 40 percent for the total population over 25 years of age. The large number of young people under 20 that were registered tended to bring the level of education up because most of this group had some high school training or were high school graduates. As might be expected, most of the Professional and Managerial people had at least a high school education as did the Clerical and Sales Entry Groups. Since the Entry group includes the high school seniors, this group shows a high educational attainment level.

Table 18

SECTION B AVAILABILITY OF THE APPLICANTS

Availability for Work

The number of applicants that reported they would be available for Unlimited work or Full-Time-Only work is the most accurate measure of the available labor force. Those persons reported to be available at a Later Date are usually high school students that plan on seeking work upon graduation and housewives with families that expect to work when their children get older. Since 52 percent of the Washburn County applicants would be available for Unlimited or Full-Time work and another 23 percent would be available Later (most of them are available by now), it is reasonable to assume that at least 75 percent of the 638 persons registered by the team or 478 persons are currently available for industrial expansion. Most of the 55 persons available for Seasonal work and the 42 persons desiring Part-Time work prefer resort or tourist industry employment. Any such industry would count on utilizing these 97 persons plus many of those with Unlimited availability or available Later status.

There were about an equal number of men and women desiring Unlimited and Full-Time work but there were more women desiring Part-Time jobs and more men wanting Seasonal work. More men (6%) than women (4%) were Not Available for any work.

Availability of All Applicants

Table 19

Availability	Total	Male	Female
Total	638	325	313
Unlimited	65	25	40
Full-Time-Only	271	146	125
Later Date	145	75	70
Seasonal	55	32	23
Part-Time	42	11	31
Not Available	60	36	24

Chart 6

Seasonal Availability

Those persons who indicated interest in Seasonal work were asked in which season they preferred to work. Their answers appear in the table and chart immediately following. Eighty-five percent of those persons with Seasonal availability desired Summer employment and ten percent Winter. None of those interested in Seasonal work wanted to work in the Spring or Fall and only 5 percent indicated no preference. These facts would indicate that most of these people wanted work in the Resort industry or in some type of construction.

Seasonal Availability

Table 20

Season	Total	Male	Female
Total	55	32	23
Any	3	2	1
Spring	--	--	--
Summer	47	27	20
Fall	--	--	--
Winter	5	3	2

Chart 7

Availability for Farm Work

There was very little interest shown in farm work of any kind. Nearly 95 percent of the applicants had no interest in farm work while less than one-half of one percent were actively seeking farm work and these persons all desired seasonal work in the local area. Of the remaining 5 percent, slightly over 3 percent would consider local year round farm work and less than 2 percent would consider local seasonal farm work. Most of the persons that would consider farm work were high school students without definite vocational plans after high school graduation. None of the applicants would leave the local area for farm work. This limited availability for farm work is typical of all counties surveyed to date and reflects the usually low wages and long hours required of farm workers.

Table 21

Availability for Farm Work

	Not Interested	Would Consider				Actively Seeking			
		Year Round		Seasonal		Year Round		Seasonal	
		Local	Non Local	Local	Non Local	Local	Non Local	Local	Non Local
Total	604	21	—	10	—	—	—	3	—
Male	294	20	—	8	—	—	—	3	—
Female	310	1	—	2	—	—	—	—	—

Availability by Occupational Group

A check of Table 22 below shows that there is very little difference in the availability of applicants by occupational group. Percentagewise only the Clerical and Sales and Service groups show any extensive willingness to accept Part-Time work. This is probably due to the fact that these jobs are generally filled by housewives. As might be expected,a number of the high school seniors in the Entry group also wanted only summer work before continuing their education again in the fall and a group of housewives in the Entry group preferred Part-Time work.

Table 22

Availability of Applicants by Occupational Group

Major Occupational Group	Availability						
	Total	Unlimited	Full-Time	Later Date	Seasonal	Part-Time	Not Available

Unskilled	25	5	11	1	4	2	2
Entry	441	37	177	119	45	25	43

Availability by Place-of-Residence

Table 23 below indicates the availability of all the applicants by place-of-residence. Availability is excellent in all areas of the county. As might be expected availability is lowest in areas where industrial development and farming provide good family income but a sufficient labor supply for industrial growth could be secured even in those areas.

Table 23

Section C Mobility of the Applicants

Mobility as used in this report refers to the geographic concept and is reflected in three ways.

1. The willingness of an applicant to move permanently for work.

2. The willingness of an applicant to commute by the week or month for work.

3. The distance an applicant will commute one-way daily for work.

Mobility is influenced by several factors such as home ownership, marital status, age of children, educational attainment, employment status, skill level, age, sex, ties to family and friends and lack of knowledge of the job opportunities out of the immediate area. Five of these factors (marital status, educational attainment, age, occupation and place-of-residence) were studied for this report and the results are shown in tables, charts and graphs on the following pages and in the appendix.

Mobility of all Applicants

Fifty-two percent of the applicants in Washburn County,or 333 persons, were willing to move out of the area for work. This large number of persons willing to leave the area permanently is an indication of the lack of local job opportunities. Ninety-five persons reported they would not move but would commute by the week outside the area for work and another one hundred persons said they would commute on a bi-weekly or bi-monthly basis.

Chart 8

Willingness to Move Permanently
Outside the Area

The number of persons willing to commute over 20 miles daily for work was comparatively small, however, a large number of them would commute at least 10 miles. This would indicate that a large percentage of the applicants would rather move out of the area than commute if it involves much travel. The generally low wages and lack of local jobs probably accounts for this unwillingness to travel any distance for work and the great interest in moving out of the area. If industrial development should occur in the county, most of the applicants have indicated they would be willing to travel at least 10 miles daily for work.

Chart 9

Miles Willing to Travel One-Way Daily for Work

Mobility by Occupational Group

Mobility of occupational groups is generally affected by the skill level and wages of the occupation. Graph E indicates that Professional and Managerial applicants show about one-third willing to move permanently for work and over 80 percent willing to travel 20 or more miles one-way daily for work. Clerical, Sales, Service and Agricultural workers show less than one-third willing to move permanently for work and also less than one-third willing to travel even 20 miles one-way daily for work. These occupations are usually relatively low pay and are filled by persons living in the immediate local area. Mobility is good for the skilled occupations and decreases with the lessening of skills and consequent lower wages. Even the unskilled workers indicated greater willingness to move and a much greater willingness to commute than did the Clerical, Sales, Services and Agricultural workers. The Entry group which consisted of many young high school students, because of their inexperience, showed a high degree of willingness to move permanently but a comparatively low desires to commute.

Graph E

Mobility by Occupational Group

Mobility by Marital Status

Marital status has a decided affect on mobility as indicated by the following graph. It should be noted that while only about 30 percent of the married applicants would move permanently for work over 30 percent would travel at least 20 miles one-way daily for work and 16 percent would travel over 30 miles one-way daily for work. Single applicants indicate a high percentage (84%) willing to move permanently for work and 26 percent willing to travel at least 20 miles one-way daily for work but only 11 percent were willing to travel over 30 miles one-way daily for work. Since less than 8 percent of the applicants were widows - divorcees etc., the sample is too small to be of significant value. The fact that over three-fourths of the single group were under 19 years of age greatly influences their willingness to move permanently.

Graph F

Mobility by Marital Status

Mobility by Educational Attainment

Educational attainment has a considerable affect on mobility as indicated in Graph G. The applicants with less than a high school education show less willingness to move than the high school graduates and the college graduates. The college drop-outs show low mobility probably because of their previous experience of having been out of the area to school. Because the high school graduate groups contained such a large number of young persons, they show a great willingness to move but usually lack transportation

(cont'd)

so are unwilling to commute any distance. The college graduate group consisted of only four persons which is too small a group to present a comparative sample.

Graph G

Mobility by Educational Attainment

Mobility by Age Group

Mobility for work tends to decrease as age levels increase. The young age group (14-19) shows almost 90 percent willing to move out of the area for work as well as a good percentage willing to travel at least 10 miles each way daily for work. The 20 to 44 age group indicated only 39 percent willing to move out of the area but a much higher percentage willing to travel over 30 miles and over 20 miles each way daily for work. The older age groups indicate about the same percentage willing to move as the 20-44 group but the distance willing to travel each way daily for work gradually declined with increasing age. The over 65 age group was too small to present a good comparison.

Graph H

Mobility by Age Group

Mobility by Place-of-Residence

The place-of-residence had very little affect on the mobility of the Washburn County applicants. Table 24 below indicates the willingness to move permanently and the distance the applicants will travel one-way daily for work by township, village and city of residence.

Table 24

Mobility by Place-of-Residence

Section D Job Potential of the Applicants

All applicants were classified by primary occupation or occupations for which they possess skills or had recent work experience. Applicants without skills or recent work history or "Entry applicants" were encouraged to take the United States Employment Service General Aptitude Test Battery (GATB) to assist counselors in their evaluation of each individual's occupational potential. The results of this test combined with a counseling interview determined the occupational potential assigned to each applicant. This section provides charts and tables to present the primary occupation and highest occupational potential of all applicants. In addition the scores of all tested applicants were compared with specific aptitude scores for various occupations to provide a job potential inventory table. A complete breakdown of the primary occupation and occupational potential of applicants can be found in Tables I and II of the appendix.

Primary Occupations of the Applicants

The 638 applicants were classified according to their primary occupations. One hundred and ninety-two persons were experienced and 446 were inexperienced or Entry workers. Table 25 below and Table 1 of the Appendix show the occupations of all the applicants. Many of the experienced applicants represent potential for immediate plant staffing while the Entry applicants represent potential trainees and workers at the entry or beginning level.

Table 25

Primary Occupations of the Applicants

Sex Age	Occupations							
	Prof'l Mgr'l	Clerical Sales	Service	Agri. Forestry	Skilled	Semi-Skilled	Un-Skilled	Entry
Total	11	45	31	8	34	38	25	446

55-64	2	4	4	1	0	0	1	12
65+	0	1	0	0	0	0	0	0

Occupational Potential of the Applicants

All the applicants were given an occupational code that reflected their present occupation, occupations for which they possessed some skill and/ or occupations for which they possessed potential and interest. As a result most applicants received more than one occupational potential code with the result that the 638 applicants were assigned 997 codes. Chart 10 below depicts the distribution of the applicants in the six occupational groups. Table II of the appendix presents a complete breakdown by occupation and sex of all the occupational codes assigned.

Chart 10

Occupational Potential of the Applicants

Job Potential Inventory

In addition to using the General Aptitude Test Battery (GATB) as an aid in counseling and to determine occupational potential it is also useful in determining specific job potential of the applicants. The GATB consists of twelve tests designed to measure nine aptitudes. The aptitudes are defined as follows:

G - (Intelligence) General learning ability.
V - (Verbal Aptitude) Ability to understand meanings of words and ideas associated with them and to use them effectively.
N - (Numerical Aptitude) Ability to perform arithmetic operations quickly and accurately.
S - (Spatial Aptitude) Ability to comprehend forms in space and understand relationships of plane and solid objects - often described as the ability to visualize.
P - (Form Perception) Ability to perceive pertinent detail in objects or in pictorial or graphic material - to make visual comparisons and discriminations, and to see slight differences in shapes and shadings of figures, etc.
Q - (Clerical Perception) Ability to perceive pertinent detail in verbal or tabular material.
K - (Motor Coordination) Ability to coordinate eyes and hands or fingers rapidly and accurately in making precise movements with speed.
F - (Finger Dexterity) - Ability to move the fingers, and manipulate small objects with the fingers, rapidly or accurately.
M - (Manual Dexterity) Ability to move the hands easily and skillfully - to work with the hands in placing and turning motions.

A total of 400 applicants were administered the GATB and their scores have been compared with the Specific Aptitude Test Battery (SATB) scores listed in the U.S. Department of Labor catalogue of test scores for various specific jobs. These SATB's are frequently used by the Employment Service as a tool to screen applicants for jobs or training. All applicants whose test scores were above the minimum SATB scores for selected jobs are tabulated in Table 26. This table, when combined with any known industry staffing pattern, can provide answers to the availability of potential manpower. A complete record of all applicant's scores is maintained in the State Administrative Office of the Wisconsin State Employment Service in Madison, Wisconsin. The names and addresses of all applicants who are tabulated in Table 26, will be supplied to the local district WSES office for use in screening, upon the request of any employer.

Table 26

Specific Job Potential of All Applicants Tested

Specific Jobs	Total	Male	Female
Automobile Mechanic	221	96	125

PART III

Employer Survey

Part III consists of tables, charts and graphs illustrating the results of the Employer Survey. The Employer Survey was carried out in Washburn County at the same time as the Applicant Survey. Two members of the team contacted all employers that employed four or more employees in Unemployment Compensation covered employment. Each employer contacted was asked to complete a survey form which asked that he list all his employees by occupation, sex, age and wages paid. He was also asked to project his employment for 1966 and 1969 by occupation. Each employer was also asked a series of questions as follows:

1. Have you had any hiring difficulty the past year and for what reason?
2. What type of training and for what occupations do you feel it is necessary?
3. Do you currently have any job openings?
4. Is your business seasonal and if so what is your peak employment season?
5. What are the reasons for the location of your business here?
6. How many persons do you hire from outside Washburn County? Where do they reside?
7. What industry would best aid your business?

Highlights of the Employer Survey

Fifty-nine employers, employing 1080 workers or 30 percent of the estimated work force of the county, were surveyed.

Nearly two-thirds of the surveyed work force were men and one-half of them were employed in Manufacturing.

An increase of 76 jobs were anticipated by 1966 with most of these being in the Service Industry. Manufacturing and Trades accounted for most of the remainder. Only 145 additional jobs were anticipated by 1970 also in the Service, Manufacturing and Trades.

The Professional and Managerial occupations accounted for one-fourth of the surveyed work force. No Agricultural or Forestry occupations were surveyed.

The Service occupations anticipated an increase of 26 persons or one-third of the total increase anticipated by 1966. The Service and Unskilled occupations accounted for one-half the additional jobs anticipated by 1970.

Only 17 of the 1080 workers surveyed were 65 years of age or older and most of them were Professional people, business owners, or part-time custodial workers, so they do not represent replacement potential.

Nearly one-half the surveyed employers reported that they had experienced some difficulty in hiring workers in the past year. Lack of experienced workers was the reason given in nearly all cases.

Twelve employers reported 54 job openings at the time of the survey, however, five openings were for Licensed Practical Nurses, six openings were for Teachers and 24 openings were for Nurse Aides.

Twenty-eight employers indicated that local training is needed. The training most often mentioned was Clerical, Cook, Auto Mechanics and Sales persons.

Wages currently paid are generally low except for a few skilled crafts.

Most employers surveyed wanted new industrial expansion with very little preference as to type except that it provided year round employment.

Current and Anticipated Employment by Industry

Since the employer survey covered only Unemployment Compensation Covered Employers of four or more employees and some governmental agencies the table below provides only a sample of total employment in the county. The 59 employers surveyed, employed 1080 employees or about 30 percent of the estimated labor force. In addition over 800 persons or 22 percent of the estimated labor force were employed in Agriculture which was not surveyed.

Almost one-fourth of the persons employed by the firms surveyed were in manufacturing, one-fourth in wholesale and retail trade and one-fourth in government with the balance employed in Service businesses, Utilities and Transportation, Construction and Finance and Insurance. Nearly two-thirds of the surveyed employees were men with nearly one-half of them employed in manufacturing.

Anticipated employment for 1966 by the firms surveyed indicated an increase of only 76 jobs with most of these being in the Service industries and Manufacturing. Anticipated employment for 1970 showed an increase of only 145 jobs with these also primarily in the Service industries and manufacturing. These slight anticipated increases over present employment for 1966 and 1970 by present employers means that there will be a large available work force for any new industry that might consider locating in Washburn County.

Table 27

Current and Anticipated Employment by Industry

Industrial Group	Current			Anticipated			
				1967		1970	
	Total	Male	Female	Total	Additional Openings Over 1965	Total	Additional Openings Over 1965

Fin.-Ins.-Real Est.	17	5	12	20	3	22	5
Government	257	147	110	257	--	257	--

Current and Anticipated Employment by Occupation

The 1080 employees of the surveyed firms are grouped by occupation in table 28. The Professional and Managerial group accounted for nearly one-fourth of the total with about an equal number of men and women. Nearly one-half of the Professional group were teachers or school officials. The Clerical and Sales and Service occupations represented about 16 percent each, mostly women. The Skilled occupational group accounted for 18 percent of the total and was predominantly men. Both the Semiskilled and Unskilled groups accounted for less than 14 percent each and were also mostly men.

The Service occupations accounted for one-third of the job openings anticipated by 1960 and by 1970. The Unskilled occupations anticipated a good increase by 1970 but only a few by 1966. The Professional and Managerial group anticipated increase was very small and consisted mostly of nurses and technicians for a proposed hospital expansion.

The anticipated increases in the Skilled and Semiskilled occupations were very small and again emphasizes the lack of job opportunity and the consequent good opportunity for new industry to find workers.

Table 28

Current and Anticipated Employment by Occupation

Occupational Group	Current			Anticipated			
				1966		1970	
	Total	Male	Female	Total	Additional Openings Over 1965	Total	Additional Openings Over 1965
Total	1080	646	434	1156	76	1225	145
Professional & Magr'l	267	153	114	274	7	282	15
Clerical and Sales	171	56	115	181	10	194	23
Service	173	31	142	199	26	222	49
Agri.-Forest.-Fish.	---	--	---	---	--	---	--
Skilled	198	190	8	203	5	208	10
Semiskilled	153	131	22	157	4	157	4
Unskilled	118	85	33	143	5	162	44

Age Distribution of Employed Workers

All of the 1080 employees surveyed were classified by age group. The results of this classification appear in table 29. Just under 53 percent of the employees were under 45 years of age and just under 46 percent were between 45 and 64. The remaining 1.5 percent or 17 persons were over 65 years of age. Most of the jobs filled by persons under 65 do not represent job potential because of retirement. The over 65 age group is discussed in the next paragraph.

Table 29

Age Distribution of Employed Workers by Sex

	Total	Under 45	45 - 64	65 & Over
Total	1080	570	493	17
Male	646	340	296	10
Percent of Total	59.8	31.5	27.4	.9
Female	434	230	197	7
Percent of Total	40.2	21.3	18.3	.6

Occupations of Employed Workers Over 65

Since only 17 of the 1,080 workers in the surveyed firms were over 65, their jobs do not represent much potential for replacement because of retirement. A breakdown by occupation of the 17 workers also shows that four were owners or other professional people whose retirement does not represent job potential for most local applicants and eight were in service occupations as custodial help or as part-time workers. This leaves only five openings in occupations which represents replacement potential to the new entrants in the labor market.

Table 30

Occupations of Employed Workers Over 65

Sex	Total	Professional Managerial	Service	Skilled	Semiskilled
Total	17	4	8	2	3
Male	10	3	3	2	2
Female	7	1	5	-	1

Employment Problems and Opportunities

Twenty-five of the 59 employers surveyed reported that they had encountered some difficulties in hiring during the past year. In most cases the difficulty stemmed from a lack of qualified and experienced workers in the area. In some occupations such as Registered Nurse or Teacher, you find a shortage in nearly all areas of the state, while others, such as cook, waitress and pulp cutter, do not offer a sufficient wage to attract qualified workers. However, only twelve of the employers reported any job vacancies at the time of the survey. These twelve employers reported 54 openings and of these 54 openings five were for licensed practical nurses and six were for teachers. An additional 24 were for nurse aides needed in a hospital expansion program. An MDTA training course has been proposed to train these 24 nurse aides. Table 31 lists all the job openings reported and the number of vacancies as well as the occupations in which the employers had hiring difficulty.

Table 31

Hiring Difficulties and
Job Openings of Surveyed Employers March 1965

Occupation	Hiring Difficulties	Number of Openings

Kitchen Help		1
Baker	X	--
Meat Cutter	X	--
Pulp Cutter	X	4

Employment of Out-of-County Residence

There were only 63 out-of-county residents employed by the 59 employers surveyed and one-third of these were employed by one employer, probably because this employer was located very near the county line. Many Washburn County residents are employed outside the county or have moved away to find work but would return with the opportunity for steady employment in the area.

Training Needs

Twenty-eight of the fifty-nine employers surveyed indicated that some type of local training is needed. These twnety-eight employers indicated twenty-one occupations in which they felt training programs were needed. Table 32 below shows the occupations for which they felt training was necessary and the number of times mentioned.

Table 32

Occupations In Which Training is Necessary

Occupation	Times Mentioned
Clerical	5
Cooks	4
Sales Person	4
Auto Mechanic	4
Machine Operator	3

Electrician	1
Plumbers	1
Checkout Clerk	1
Bookkeeper	1
Plant Maintenance Man	1
Licensed Practical,Nurse	1
Auto Body Repairman	1
Kitchen Help	1
Registered Nurse	1

Seasonal Employment

Twenty-one of the fifty-nine employers surveyed reported that their business was seasonal in nature. Fourteen of the twenty-one were in retail trade which is greatly affected by the tourist trade in the area. Several others were engaged in the harvest of forest products or manufacturing of products with a seasonal demand. These twenty-one seasonal employers employed 277 persons or nearly one-fourth the surveyed labor force. While most of these business firms do not close down during the off-season,they cut back considerably on the number of employees.

Current Wages in Surveyed Occupations

Since wages currently being paid in Washburn County are of interest to prospective employers the survey team asked each employer to list the hourly wages paid. A list of the more common occupations and the lowest and highest wages paid for each appears below. This table only lists lowest and highest wages and cannot be used to calculate the average. In general most wages paid in Washburn County are low and should not be a factor in discouraging new industry.

Table 33

Current Wages In Surveyed Occupations

Occupation	Hourly Wage	
	Low	High
Bookkeeper	1.25	1.75
Technician	1.79	3.30
Nurse Aide	1.10	1.48
Clerk-Typist	1.15	1.35
Office Clerk	1.15	1.75
Cashier	1.10	1.75
Sales Clerk	1.10	1.35
Checkout Clerk	1.15	1.60
Stock Clerk	1.10	1.45
Cook	1.10	1.80
Kitchen Help	.85	1.25
Waitress	.85	1.30
Mechanic	1.00	1.75
Electrician-Plumber-Carpenter	2.40	3.15
Skilled Factory Worker	1.25	2.50
Semiskilled Factory Worker	1.55	2.12
Truckdriver	1.41	1.84
Equipment Operators	1.84	2.12
Common Labor	1.57	2.45
Factory Labor	1.35	1.90

Industrial Expansion

Forty-nine of the employers surveyed wanted some new industrial expansion and most of them indicated that any new industry would help the county and their businesses. Some preferred industry to utilize forest and wood products while others wanted to increase the tourist business. Most employers preferred several small industries to a large one and steady employment over seasonal. This positive attitude towards new industry on the part of existing industry should be encouraging to anyone planning to locate in the area.

PART IV

APPENDIX

Part IV or the Appendix consists of a set of Tables providing detailed data on the primary occupations, total occupational potential, mobility and industrial experience of all applicants. These tables provided the background for the charts and graphs in Part 2.

APPENDIX

Following is an explanation which delineates the major occupational groups for entry classifications as used in Tables 1 and 2 of the appendix.

PROFESSIONAL, TECHNICAL AND MANAGERIAL WORK:

Persons having the qualifications necessary for entry into work requiring the capacity to acquire and apply special knowledges involved in artistic creation, entertainment, social service work, teaching, scientific study, research, engineering, law, business relations or management.

CLERICAL AND SALES WORK:

Persons having the qualifications necessary for entry into work involving recording, transcribing, composing, compiling, transmitting and systematizing written communications and records, computing or compiling mathematical or statistical data, or dealing with the public in business situations to affect sales, give information, or perform other commercial or administrative services.

SERVICE WORK:

Persons having the qualifications necessary for entry into work that involves ministering to the needs of others in preparing food, serving meals, caring for children and in other types of personal service activities.

AGRICULTURAL, MARINE AND FORESTRY WORK:

Persons having the qualifications necessary for entry into work involving the raising and harvesting of crops; the breeding, care, catching and hunting of fish and other animals; the handling of boats; the preservation of forest; the gathering of forest products and other related outdoor activities.

MECHANICAL WORK:

Persons having the qualifications necessary for entry into work in which the independent judgement of the worker determines the machine and manual operations to be performed in obtaining the proper form and quantity of material to be produced. Workers may be required to lay out work; to estimate quality, suitability, and needed quantities of materials; to make precise measurements; to read blueprints or other specifications; and to make necessary computations or mechanical adjustments to control or regulate processes.

MANUAL WORK:

Persons having the qualifications necessary for entry into work in which the form, quality and quantity of the work depend primarily on prescribed methods and on the performance of machines or equipment or on the use of hands or hand tools. Workers may be required to observe the operation of machines, feed machines and to perform other repetitive and physical tasks.

Conducting a Non-Farm Agricultural Work Experience Program in Vocational Agriculture; A Handbook.

Louisiana State Dept. of Education, Baton Rouge. Vocational Education Div.
Louisiana State Univ., Baton Rouge. School of Vocational Education

MF AVAILABLE IN VT-ERIC SET.
Pub Date - Sep66 119p.

GUIDELINES; *PROGRAM GUIDES; *VOCATIONAL AGRICULTURE; *OFF FARM AGRICULTURAL OCCUPATIONS; *COOPERATIVE EDUCATION; *PROGRAM DEVELOPMENT; EDUCATIONAL POLICY; HIGH SCHOOLS

This handbook is for teacher use in planning, initiating, supervising, and evaluating work experience programs for high school vocational agriculture students. The content includes material on: (1) surveying the community, agricultural businesses, and students, (2) familiarizing school personnel, (3) establishing policies, (4) state and federal laws, (5) student learner certificates, (6) suggested chronological procedures, (7) publicity, (8) advisory committee, (9) selecting students and orienting parents, (10) establishing a training station, (11) student scheduling, (12) courses of study and training plans, (13) work permits and certificates, (14) employer and teacher responsibility for supervision, and (15) program evaluation. The appendix contains forms for surveying businesses, recording student information, a student enrollment application, an application for a student learner certificate, information about selecting training centers, a training plan agreement, a course of study outline, a training center outline, and evaluation forms for use by all parties. Information sources regarding employment of students and 17 hazardous occupation orders are listed. (DM)

FOREWORD

Instruction in non-farm agriculture has become an integral part of educational programs of vocational agriculture conducted on the high school level. Policies and procedures are needed for implementing this new educational venture.

This handbook has been designed to give the teacher of vocational agriculture direction as programs of instruction in non-farm agriculture are added to the curriculum. It is not intended that suggestions given will be slavishly followed but rather that they will serve merely as guides with the teacher using initiative in implementation and adaptation of the material to fit the needs of the local school community.

Regardless of the local adaptations in the instructional program, it is felt that there are four basic steps in the development of non-farm vocational agricultural education. These steps are:

1. Planning the work experience program
2. Initiating the work experience program
3. Supervising the work experience program
4. Evaluating the work experience program

The basic principles presented in the handbook should be adaptable for use with instruction in each of the eight fields of non-farm agriculture.

Major responsibility for the preparation of this handbook was assumed by George Bruce McKinnon, a graduate student at Louisiana State University under a fellowship financed by the Louisiana State Department of Education.

No other human occupation opens so wide a field for profitable and agreeable combination of labor with cultivated thought as agriculture.

President Abraham Lincoln
An address delivered at the
State Fair of Wisconsin held
in Milwaukee in 1859.

INTRODUCTION

Education in agriculture at the high school level received initial federal support with the passage of the Smith-Hughes act in 1917. This act provided federal aid for the promotion of vocational education, namely, "that the controlling purpose for such education shall be to fit for useful employment; that such education shall be of less than college grade and be designed to meet the needs of persons over fourteen years of age who have entered upon or who are preparing to enter upon the work of the farm" and that the school giving such education "shall provide for directed or supervised practice in agriculture, either on a farm provided for by the school or other farm, for at least six months per year."[1]

The 1963 Federal Vocational Education Act recognized the need for instruction in agricultural occupations other than farming and stipulated that vocational agriculture funds may be used to train for any occupation involving knowledge and skills in agricultural subjects whether or not such occupations involve work of the farm or of the farm home. This legislation provides for directed or supervised practice, either on-farm or non-farm, and recommends that vocational agriculture

---

[1]Rufus M. Stimson, Vocational Agriculture Education By Home Projects (New York: The MacMillan Company, 1919), pp. 19-20.

be broadened to include non-farm agricultural occupations as well as the farming occupations. As a result vocational agriculture should grow in enrollment and in the scope of its offerings. Furthermore, it should serve urban as well as rural students, both boys and girls.

The Louisiana State Plan for Vocational Education 1964-1968 outlines the phase of vocational agriculture pertaining to non-farm agricultural work experience as follows, (Paragraphs 8.11-2, 8.12, 8.13-12).

"Programs of instruction shall be provided for youths and adults who have occupational objectives in agricultural jobs off-the-farm. Instruction will be based on the vocational objectives of the enrollees and supplemented with appropriate supervised work experience for each stated objective. Instruction shall be offered for those who are preparing to farm and for those with occupational objectives in vocations requiring competencies in plant and animal sciences, agri-business, or farm mechanics or any other occupation involving agricultural applications. The organization and content of the instructional program for those with occupational objectives in related fields shall be determined on the basis of individual needs, carried out by the enrollee to provide practical application of skills, knowledges, and techniques requisite to success and advancement in the enrollee's career objective. These work experiences shall be under the supervision of the agriculture teacher and carried out under the terms of a written agreement between the employer, the work experience trainee, and the school."[2]

---

[2]Louisiana State Department of Education, Division of Vocational Education, The Louisiana State Plan For Vocational Education For 1964-1968, pp.78-79.

For a number of years agriculture teachers and staff members have observed a marked increase in the number of non-farm occupations where education in agricultural subjects is essential. In 1965 a comprehensive study was conducted by the College of Agriculture at the Louisiana State University to determine the employment opportunities and needed competencies for workers in Louisiana.

One section of the study identified specific agricultural businesses in which the workers were required to have certain agricultural competencies as a prerequisite of their employment. Opportunities for non-farm agricultural employment were found in eight occupational families; these were determined to be:

Farm Machinery Sales and Service

Farm Supplies and Equipment

Livestock and Poultry

Crops, Forestry and Soil Conservation

Ornamental Horticulture

Wildlife and Recreation

Farm Services

Agricultural Service[3]

Numerous opportunities for training students are found within each of the eight families since each is composed of many specific occupations.

---

[3]Clifford L. Mondart, Sr. and Charlie M. Curtis, Occupational Opportunities And Training Needs For Non-Farm Agricultural Jobs In The Metropolitan Areas of Louisiana (Baton Rouge: Department of Vocational Education, College of Agriculture, Louisiana State University, February, 1965), pp. 15-18.

Little, if any, attempt has been made to train students in a realistic manner for job-opportunities in these areas of employment previously. Now, through enabling legislation, public awareness and teacher enthusiasm, instructors may proceed to develop programs whereby these gaps in the educational program can be closed and the student who graduates in vocational agriculture will be in a position to make job entry into these occupational areas with qualifications heretofore not possessed.

In implementing a program of instruction involving student placement in occupations for work experience, a teacher must become familiar with the laws and policies which affect such a program. He must also devise an organized system whereby he can co-ordinate the program between the student, the classroom and the training station. It is important that school administrators, principals and guidance counselors along with the advisory committeemen, employers and parents understand the total program thus insuring its success.

Broadly speaking, vocational agriculture in the high school will take on the appearance of a two-fold program of instruction. This will mean the offering of a choice of two options to the student, one of which is the supervised farming program for those who are interested and have the potential of becoming farmers. The second option will be cooperative non-farm work experience in an agriculturally related business for those students who plan a career other than farming. Either of these options will be preceded by two years of study in applied

animal science, applied plant science, leadership activities, farm mechanics and supervised experiences which should provide a basic knowledge for any person employed in agriculture.

The supervised farming program phase will remain a part of the program. However, at the end of the second year of study those students who desire training in the cooperative non-farm agricultural business work experience program will branch off from the conventional supervised farming program instruction and will apply for placement in related occupations of their choosing. Classroom instruction at this point will become more specialized to meet the needs of students on an individual study basis.

Having briefly described the direction in which the vocational agriculture program is moving, an expansion will be made upon a specific component of the course, the placement of students in private agricultural business for work experience training.

The work experience program is concerned with the following:

Essential Procedures

1. Planning the work experience program
   - A. Surveying the community to determine the businesses related to agriculture.
     - (1) Surveying these businesses to determine the agricultural occupations involved in them.
   - B. Surveying the students to determine what their occupational objectives are.
   - C. Familiarizing the principal and counselor with the program and securing their cooperation.

D. Becoming familiar with the laws and policies which will affect the program.

E. Establishing policies related to students.

F. Laying out the steps to be followed and scheduling them in a timetable sequence.

2. Initiating the work experience program

A. Publicizing the program

B. Organizing the advisory council

C. Selecting the students

D. Meeting with parents for orientation purposes

E. Establishing the training stations

F. Assisting students in scheduling classes

G. Setting up courses of study and training schedules to fit individual occupational objectives

H. Securing work permits and certificates for student-learners

3. Supervising the work experience program

A. Employer's responsibility for supervision of student

B. Teacher's responsibility for supervision of student

4. Evaluating the work experience program

A. Program evaluation by the teacher

B. Program evaluation by the student

C. Program evaluation by former students

D. Program evaluation by employers

E. Program evaluation by the advisory committee

Definition of Terms

Cooperative. Denotes that the program involves cooperation between the school and private businesses in the community.

Non-Farm Agricultural Business. A business which involves certain agricultural competencies but is not engaged in the actual production of food and fiber.

Work Experience. The opportunity to learn by actual participation in live activities involved in the performance of duties.

Student-Learner. The student enrolled in the cooperative work experience program.

Student-Learner Certificate. A certificate which will enable students enrolled for cooperative occupational experience to be exempt from certain provisions of the Fair Labor Standards Act.

Work Permit. A permit issued by the Parish School Superintendent permitting a student to do certain types of work.

Hazardous Occupations. An occupation considered dangerous and injurious to the health and well-being of minors up to 18 years of age as designated by the Secretary of Labor.

Trainee Supervisor. That person who is responsible for the student's training program in the business.

Training Station. The business where the student receives his training. Sometimes called training center.

Trainee. The student receiving training.

Co-ordinator. The teacher responsible for carrying on the program.

Advisory Council or Committee. A group of persons, representing the community, who assist the teacher in an advisory capacity in establishing policies, evaluating and publicizing the program.

Apprentice. Sometimes used in referring to student-learner or trainee.

STEP I

PLANNING THE WORK EXPERIENCE PROGRAM

Since the primary purpose of this study is to propose a systematic method of carrying out a non-farm work experience program for high school students studying vocational agriculture, the following pages will outline the necessary steps in developing the program and suggest activities which the teacher should employ in dealing with them. These steps or procedures are discussed in chronological order as related to their place in the total program.

Before the teacher should attempt to initiate a program involving the placement of students in private businesses for work experience training there is some essential "ground-work" which should be laid. This preparation is a must if he is to proceed intelligently in executing the program. Certain information is necessary and certain arrangements must preceed the actual launching of the work experience program. The following suggestions are offered as a means of securing this foundation upon which the program will be based.

Surveying the Community

The businesses related to agriculture which are found within the community will determine to a large extent the opportunities for carrying

on a work experience program in the local department of vocational agriculture. Since this is the determining factor for deciding whether or not such a program is practical, the teacher should discover just what agricultural businesses are available to his students. This may be done in several ways. The instructor may utilize the yellow pages in the local telephone directory, consult with the local chamber of commerce, the employment security office and, of course, he will doubtlessly have a knowledge of some agricultural businesses through his own familiarity with the community. At any rate a comprehensive list of these businesses which are located in his community should be developed.

Surveying the Agricultural Businesses

After determining the agricultural businesses found locally, the teacher should then proceed to determine just what agriculturally oriented occupations make up each of the establishments. It follows that he should also seek to identify the various competencies involving agriculture which these occupations require. The purpose of this survey is merely to identify the opportunities for employment found locally and determine the knowledge which is considered important in these various jobs. The teacher is not concerned at this point with establishing working agreements with these businesses. This will follow later after determining the occupational objectives of his students.

A cooperative study by several teacher training institutions has suggested instruments for obtaining this information. For those teachers who may not already be familiar with these forms they are included in the Appendix on pages 56 - 63.

Student Surveying

After the student has completed two years of study in vocational agriculture he chooses whether to follow one of two options, either production farming for those who intend to farm or else non-farm agriculture for those who would like to receive training in businesses which are related to agriculture. Those of the latter group will then make application for enrollment in the non-farm work experience program. This application along with other pertinent information will indicate the student's occupational objective he will have an opportunity to list his first and second choice. The teacher after carefully studying the information will decide whether or not to accept him in the program. This decision will also be based on other information the teacher and guidance counselor will possess such as that from the personal interview and opinions formed from teaching the student for two years previously. An instrument for use in determing the student's occupational objectives is provided in the Appendix on pages 66 and 67

Familiarizing School Personnel

Once the teacher has completed the surveys to determine the opportunities available in his community and the occupational objectives of his students, he should be prepared to discuss his program with the school personnel, especially the principal and the counselor. Whether or not the program will be a success is largely determined by how well the principal regards it since he is in charge of scheduling classes and permitting the student to possibly leave school early. The principal

is also the person who can see to it that the teacher's schedule allots him the necessary time for co-ordinating and supervising the program. The counselor can have a direct influence upon the program in a favorable way once he becomes convinced of its worthiness. Good counseling may assist significantly in routing desirable students into the program as well as guiding students away from the program if it is believed that such students would not fit well into an atmosphere where initiative for self-improvement is essential.

The teacher should be able to explain the program to those concerned and to give illustrations of opportunities for valid vocational instruction based upon the student's occupational objectives. He should be able to outline the types of cooperation he will need from these school personnel in developing a work experience program and secure their support.

Establishing Policies Related to Students

The teacher should establish certain policies regarding students based upon the nature of the program as well as certain state and federal regulations which he must comply with in dealing with a program in which minors are employed.

Eligibility of Students. A student participating in the cooperative non-farm work experience program should, due to the nature of the program, meet certain qualifications.

First, he should have completed two years of vocational agriculture in a four year program, thereby giving him some degree of proficiency and understanding of agricultural subjects.

Second, he should reach the age of 16 before the end of the first semester. If he is to be employed under a student-learner certificate he will have to be 16 before he is eligible for the certificate.

Although a student may be eligible for placement according to the above requirements, he must be interested in preparing for the occupation and have the ability and aptitude for it. Under no circumstances should the time of the instructor, the employer or the student be wasted in merely providing a "job" for students whereby they can receive pay. This is to be an instructional training program, not merely an employment program.

Hours of Training. The student may spend any number of hours at the training station provided that the total of these hours plus those spent in school does not exceed 40 hours per week. Sufficient time should be spent in training to permit adequate experience for the student and adequate opportunity for instruction and observation.

The normal situation would be for the student to spend 5 hours per day in school and 3 hours per day in training. When school is not in session the student may work additional hours provided they do not exceed 8 hours per day and a total of no more than 40 hours per week in training or in school plus training.

Pay for Students. Students must be paid for the time spent on the job in the training station at the same rate as other employees of the same age or experience. Employers may obtain a Student-Learner Certificate allowing them to pay 75% of the minimum wage for a portion of the training period.

Length of Employment. Students must be employed in an occupation at a training station for enough time to justify the program. This may vary according to the occupation and the amount of training at the center.

Travel. The student will be responsible for his own travel to and from the training center. Preferably, the training center approved should be within a reasonable travel distance from the school and home of the student in order to reduce the amount of travel required.

Individual Training Plan. An individual training plan will be worked out for each student. A course of study for his classroom instruction in vocational agriculture and a training outline for his occupational training at the training station are necessary.

Employment Authorization. No student may be employed without first obtaining a work permit from the parish superintendent of education. Student-learners may be employed in certain "hazardous" occupations provided that certain written agreements are executed. (See Appendix under Hazardous Occupations, Order No. 5 paragraph on exemptions).

Departmental Records. The teacher, after receiving the student's application for enrollment in the Non-Farm Work Experience Program, should prepare a personnel form concerning the student and keep this record in the departmental file for future reference. Essentially it should contain the information found on the student's application plus certain material which would be found in the student's cumulative records. A suggested form for this information is found in the Appendix on pages 64 and 65.

State Laws Pertaining to Employment of Minors

In order that a teacher may anticipate any complications of enacting a program which possibly may deal with many of several hundreds of occupations, the Louisiana laws pertaining to these situations are set forth. It is suggested that any teacher working with students in non-farm agricultural occupations become aware of these provisions and incorporate them into his program. The launching of any program of student employment with a disregard of these provisions would certainly lead to embarrassment of the teacher and possibly endanger the success of his program.

Louisiana Child Labor Law. No minor under the age of 18 shall be allowed to work in any gainful occupation until the employer has procured and has on file an employment certificate for such minor issued by this department.

No minor under the age of 18 shall be employed in any gainful occupation for more than 8 hours in any day or more than 44 hours or 6 consecutive days in any one week.

No boy between the ages of 16 and 18 may be employed before the hour of 6:00 A.M. or after the hour of 10:00 P.M.

No girl under the age of 18 and no boy between the ages of 14 and 16 may be employed before the hour of 6:00 A.M. or after the hour of 7:00 P.M.

No minor under the age of 18 (except those indentured as apprentices in accordance with Act 364 of 1938), shall be allowed to work:

1. In the oiling, cleaning or wiping of machinery or shafting or applying belts to pulleys
2. In or about any mine or quarry
3. In or about places where stone cutting or polishing is done
4. In or about plants manufacturing explosives or articles containing explosive components or in the use or transportation of same
5. In or about plants manufacturing iron or steel, ore reduction works, smelters, foundries, forging shops, hot rolling mills or in any other place in which the heating, melting, or heat treatment of metals is carried on
6. In the operation of machinery used in the cold rolling of heavy metal stock, or in the operation of power driven punching, shearing, stamping, metal plate bending, or metal planning machines
7. In or about sawmills or cooperage stock mills
8. In the operation of power-driven woodworking machines, or off-bearing from circular saws
9. In logging operations
10. As driver of any motor vehicle used for commercial or industrial purposes or as a helper thereon the term "helper" being defined as any person other than the driver whose work in connection with the transportation or delivery of goods or commodities in or on a motor vehicle

11. In the operation of passenger or freight elevators or hoisting machines
12. In spray painting or in occupations involving exposure to lead or its compounds or to the dangerous or poisonous dyes or chemicals
13. In any place or establishment in which intoxicating alcoholic liquors are sold for consumption on the premises or in which such liquors are manufactured or bottled
14. In any other place of employment or in any other occupation that the commissioner of labor shall, after a public hearing thereon, determine hazardous or injurious to the life, health, safety or welfare of such minors.

This law does not apply to minors employed in agriculture or domestic service.

Penalties for violations of this law range from fines of $50.00 to $250.00 and/or prison terms from 30 days to three months.

Employment Certificates and Street Trade Permits are obtained in all parishes (except Orleans) from the Parish Superintendent of Schools, located in the parish seat of each parish.

For further information regarding the employment of minors write for a pamphlet entitled, "Labor Laws Relating to Women and Children" in care of the Commissioner of Labor, Baton Rouge, Louisiana.

Laws pertaining to the employment of girls are not the same as those covering boys, therefore in the event that a teacher should have girls enrolled in a program of non-farm work experience he should

secure the above mentioned pamphlet and become familiar with those laws also.

The exceptions for minors employed in "agriculture" refer to farm employment, not farm related occupations in agricultural businesses.

Federal Laws Pertaining to the Employment of Students

In addition to the state laws which should be complied with, the teacher should also become familiar with the federal laws which apply to the practice of employing students in work experience programs. Some of the occupations which students will pursue will be those occupations that come under the U. S. Fair Labor Standards Act. It should be determined without doubt if any occupation chosen by the student is affected by this act. This should be done in order that no student, school or employer violates any of the provisions of the act, either willfully or unintentionally. The following information deals specifically with the provisions of this act as it relates to the employment of students in connection with the "Cooperative Non-Farm Agricultural Business Work Experience Program in Vocational Agriculture."

Hours. The number of hours at work and in school shall not exceed 40 hours per week. When school is not in session on any school day, the student-learner may work a number of hours in addition to the weekly hours of employment training, provided, however, that the total hours worked shall not exceed 8 hours on any such day. A notation should be made in the employer's records to the effect that school not being in session was the reason additional hours were worked on such a day.

During the school term when school is not in session for the entire week, the student-learner may work at his employment training a number of hours in the week in addition to those authorized, provided, however, that the total hours shall not exceed 40 hours in any such week. A notation should be made in the employer's records to the effect that school not being in session was the reason additional hours were worked in such week.

Wages. Students may be paid at a lower rate than the minimum set by law. This can be done only by making application for a student-learner certificate and receiving approval. This application shall be filed by the employer with the authorized representative of the Administrator at the appropriate Regional or Territorial Office of the Wage and Hour and Public Contracts Divisions, United States Department of Labor. (The Regional Office serving Louisiana is located at 1931 North Avenue South, Birmingham, Alabama,)

This certificate allows the employer to pay the student-learner at a wage rate of 75% of the minimum wage. It is suggested that a progressive wage schedule be proposed. If this is done the starting rate must not be less than 75% of the minimum wage.

If the occupation in which the student is employed is not covered by the minimum wage law, the appropriate wage shall be determined by the employer and the advisory committee. Several bulletins are available concerning the employment of minors, and a list of those pertinent will be found in the Appendix on page 72.

Student-Learner Certificates

As an essential part of the planning phase of the program, teachers should become well acquainted with the use of student-learner certificates.

Under regulations established pursuant to both the Fair Labor Standards Act and the Walsh-Healey Public Contracts Act student-learners may be employed at wages below the minimum wages established under those acts in accordance with certificates issued by the Wage and Hour and Public Contracts Divisions of the U. S. Department of Labor. The employment of student-learners at special minimum wages is subject to Regulations, part 520, issued under the authority of section 14 of the Fair Labor Standards Act. Section 50-201.1102 of the general regulations under the Walsh-Healey Public Contracts Act recognizes the standards and procedures of Regulations, part 520, as applicable to the issuance of certificates permitting employment of student-learners at special minimum wages in the performance of Government contracts.

Coverage. The Fair Labor Standards Act applies to employees (including student-learners) engaged in interstate commerce or in the production of goods for interstate commerce, including any closely related process or occupation directly essential to such production, unless specifically exempt by some provision of this act. The act also applies to employees (including student-learners) who are not themselves engaged in or producing goods for commerce but who are employed in certain large enterprises engaged in commerce or in the production of goods for commerce. Popularly known as the Federal Wage and Hour Law, this

act establishes minimum wage, child labor, and maximum hours and overtime standards for employment subject to its provisions.

The Walsh-Healey Public Contracts Act applies in general to all contracts entered into by the Government for the manufacture or furnishing of materials, supplies, articles or equipment in any amount in excess of $10,000. This act requires the payment to employees engaged in the performance of such contracts of not less than the minimum wage determined by the Secretary of Labor to be prevailing for the industry. In addition, the Public Contracts Act contains special provisions for safety and health standards, restrictions against the use of child labor and convict labor, and special provisions for the payment of overtime for work subject to the act.

Special situations which may arise under these two acts are explained under "certificates." The Wage and Hour and Public Contracts Divisions will make available upon request bulletins on the coverage of these acts. If in doubt as to whether either or both of these acts apply to a particular type of employment, a letter setting forth the facts of your situation should be sent to the regional office of these Divisions which serves your area.

Who is a Student-Learner? As defined in the regulation, a student-learner is a student who is receiving instruction in an accredited school, college or university, and who is employed on a part-time basis pursuant to a bona fide vocational training program administered by his school. A bona fide vocational training program is one authorized and approved by a State board of vocational education or other recognized educational

body. Such programs must provide for part-time employment training supplemented by and intergrated with a definitely organized plan of instruction designed to teach technical knowledge and related industrial information which is given as a regular part of the student-learner's course of study in the educational insitutiton he attends. Such programs may be in retail and service occupations as well as in trade and industrial skills.

Who May File. Whenever it is believed necessary in order to prevent curtailment of employment opportunities, application may be made for a certificate authorizing an employer to pay student-learners special minimum wages below the applicable statutory (or wage order) minimum wage under the Fair Labor Standards Act or below a minimum wage determination under the Walsh-Healey Public Contra ts Act. A separate application on official forms furnished for the purpose must be filed by the employer for each student-learner. Parts of this application are best completed by a school official, other parts by the employer. The appropriate school official, the employer, and the student-learner must sign the application. Before a certificate can be issued, the conditions specified in section 520.5 of the regulation must be met. (See Conditions Governing Issuance, page 30)

Where to File. Applications must be made on official forms supplied by the Divisions. The original of the completed application must be filed with the regional office of these Divisions serving your area. The regional office serving Louisiana is:

Regional Director

U. S. Department of Labor

Wage and Hour Division

1931 North Avenue South

Birmingham, Alabama

A copy must be retained in the employer's files. Additional copies may be made available to school officials and to the student-learner.

When to File. Applications should be filed 15 to 30 days in advance of the date the student-learner begins his employment so that the Divisions can take action on the application before employment begins.

Certificates Cannot be Issued Retroactively. Where the student's employment opportunity might be lost by delay in obtaining a certificate, section 520.6 (c) (2) of the regulation establishes a procedure for a temporary authorization. A description of this procedure appears at the top of the face of the application.

Age and Proof of Age. Minors under 16 years of age are not eligible for student-learner certificates. Furthermore, in occupations declared to be hazardous by the Secretary of Labor, the student-learner must be at least 18 years of age. (Hazardous Occupations Orders Nos. 5, 8, 10, 12, 14, 16, and 17, permit student-learner employment at 16 and 17 years of age under certain specified conditions.) For information concerning child-labor provisions of the Fair Labor Standards Act, see Child-Labor Bulletin No. 101. The Appendix contains the regulations pertaining to those occupations considered hazardous, see pages 93 - 109.

For employment subject to the Walsh-Healey Public Contracts Act, male employees must be at least 16 years old and female employees must be at least 18 years old.

In addition to entering the student-learner's birth date in item 3 of the application, the employer should obtain and keep on file an employment or age certificate showing the student-learner to be at least the minimum age for the occupation in which he is employed. In 45 States, the District of Columbia, and Puerto Rico, State employment and age certificates are accepted as proof of age under the child-labor provisions of the Fair Labor Standards Act. (Such certificates also provide assurance that the employment is in compliance with the requirements of the State child-labor law.) In four States, Idaho, Mississippi, South Carolina and Texas, where state age and employment certificates are not available, Federal certificates of age may be obtained within the State from the Wage and Hour and Public Contracts Divisions. Special arrangements have been made in Guam and Alaska. For information concerning proof of age in these areas consult the nearest office of the Wage and Hour and Public Contracts Division.

Period of Employment Training at Special Minimum Wages. A certificate may be issued only for that portion of the employment training period for which special minimum wages below and minimum wages under the Fair Labor Standards Act or the Walsh-Healey Public Contracts Act are necessary. This period may not exceed the length of one school year unless a longer period is found to be justified by

extraordinary circumstances which must be explained in detail at the time of application. No certificate shall authorize employment training beyond the date of graduation of the student-learner.

Employment training at special minimum wage rates during the summer vacation period will not generally be authorized. However, in exceptional cases summer employment training may be authorized when it is an integral part of the vocational training program. Requests for summer vacation employment must be accompanied by a statement explaining the extraordinary circumstances justifying this employment, including the number of hours per week for which special minimum wages are requested.

In item 16 of the application, show only the number of weeks of employment during which special minimum wages will be paid. The beginning and ending dates of employment shown in items 8 and 9 should coincide with this period.

Hours of Work and School Instruction. The term "hours of school instruction" applies to all hours spent by the student-learner in actual classes of school instruction and does not include school hours spent in study hall, home room, and activity periods for which no academic credit is given.

The combined hours of school instruction and employment training authorized under a certificate may not exceed 40 hours a week unless justified by extraordinary circumstances. Such extraordinary circumstances must be explained in detail in a statement submitted with the

application. Hours at special minimum wages in addition to those authorized on a certificate may be worked provided that the total hours worked do not exceed:

(a) 8 hours on any school day when school is not in session;

(b) 40 hours in any week during the school term when school is not in session for the entire week.

The employer shall note in his records the number of such additional hours and that they were worked because school was not in session.

A Student-Learner May Not be Employed in Any Week at Special Minimum Wage Rates for Hours in Addition to Those Authorized in the Paragraph Above. In item 17 of the application, show only those hours of employment during a week the employer intends to pay wages below the applicable minimum wage under the Fair Labor Standards Act or below the wage determination minimum applicable under the Public Contracts Act.

Wage Rates. The hourly wage rate shall be not less than 75 percent of the applicable statutory minimum wage under the Fair Labor Standards Act. It is suggested that consideration be given to the payment of a progressive wage schedule, particularly if a full school year of employment training at special minimum wages is requested. If a progressive wage schedule is proposed, the special minimum starting rate must be not less than 75 percent of the applicable statutory minimum. In item 18, show only those wages which are below the applicable minimum wage under the Fair Labor Standards Act. (This paragraph also applies to work subject to Public Contracts Act wage determinations.) (See special situations under Walsh Healey Act)

Certificates. The original of the student-learner certificate will be mailed directly to the employer. Two copies will be mailed to the appropriate school official, one to be retained for his records and the other to be presented to the student-learner. Applications Which Do Not Contain All Requested Information May Be Returned For Completion Before Action Is Taken. Student-learner certificates can be issued with a minimum of delay where the application provides the details requested. For additional information or application forms, communicate with the regional office of these Divisions which serve your area.

Special Situations Under The Walsh-Healey Public Contracts Act. The general provisions of this act are explained in the introduction to this guide. The general regulations under the Public Contracts Act permit the employment of student-learners at wages below prevailing minimum wage determinations made under this act in accordance with the same standards and procedures as are prescribed for their employment at wages below the minimum wage applicable under the Fair Labor Standards Act. The provisions of Regulations, part 520 and the instructions in this guide apply to student-learners employed in the performance of Government contracts subject to the Public Contracts Act. Special situations may arise where the employment is subject to differing rates of pay under the two acts or is subject only to the Public Contracts Act.

An employer who holds or who obtains a student-learner certificate issued in order to prevent curtailment of opportunities for

employment under the Fair Labor Standards Act may employ the named student-learner in the performance of a Government contract subject to the Public Contracts Act at the authorized special minimum wage and in accordance with the terms specified in that certificate.

An employer may not need a student-learner certificate in order to prevent the curtailment of employment opportunities under the Fair Labor Standards Act or his employees may not be subject to that act. In either case, an employer performing a Government contract subject to a minimum wage determination under the Public Contracts Act may, upon proper application, be issued a certificate authorizing a special minimum wage rate not less than 75 percent of the minimum wage determination applicable to the contract being performed. Employment under such certificates is subject to the standards and procedures of Regulations, part 520.

Compliance. Certificates may not be issued if there are serious outstanding violations of a student-learner certificate previously issued to the employer or if there are serious violations of other provisions of the Fair Labor Standards Act by the employer which provide reasonable grounds to conclude that the terms of the certificate would not be complied with, if issued. Moreover, no certificate permitting a wage lower than the statutory minimum under the Fair Labor Standards Act or a Public Contracts Act minimum wage determination will excuse non-compliance with the child-labor, overtime, or other provisions of these acts or the regulations issued thereunder.

A certificate may be withdrawn if it is no longer necessary to prevent curtailment of opportunities for employment or if the employer fails to comply with the limitations in the certificate or otherwise violates the act.

Conditions Governing Issuance of Special Student-Learner Certificates. The following conditions must be satisfied before a special certificate may be issued authorizing the employment of a student-learner at subminimum wages:

(a) Any training program under which the student-learner will be employed must be a bona fide vocational training program;

(b) The employment of the student-learner at subminimum wages authorized by the special certificate must be necessary to prevent curtailment of opportunities for employment;

(c) The student-learner must be at least 16 years of age (or older as may be required pursuant to paragraph (d) of this sub-section);

(d) The student-learner must be at least 18 years of age if he is to be employed in any activity prohibited by virtue of a hazardous occupation order of the Secretary of Labor; (See Hazardous Occupations in the Appendix).

(e) The occupation for which the student-learner is receiving preparatory training must require a sufficient degree of skill to necessitate a substantial learning period;

(f) The training must not be for the purpose of acquiring manual dexterity and high production speed in repetitive operations;

(g) The employment of a student-learner must not have the effect of displacing a worker employed in the establishment;

(h) The employment of the student-learners at subminimum wages must not tend to impair or depress the wage rates or working standards established for experienced workers for work of a like or comparable character;

(i) The occupational needs of the community or industry warrant the training of student-learners;

(j) There are no serious outstanding violations of the provisions of a student-learner certificate previously issued to the employer, or serious violations of any other provisions of the Fair Labor Standards Act of 1938, as amended, by the employer which provide reasonable grounds to conclude that the terms of the certificate would not be complied with, if issued;

(k) The issuance of such a certificate would not tend to prevent the development of apprenticeship in accordance with the regulations applicable thereto or would not impair establishment apprenticeship standards in the occupation or industry involved;

(l) The number of student learners to be employed in one establishment must not be more than a small proportion of its working force;

(m) The special minimum wage rate shall not be less than 75 percent of the applicable minimum under section 6 of the Act; and

(n) No special student-learner certificate may be issued retroactively.

Employment Records to be Kept. In addition to any other records required under the record-keeping regulations, the employer shall keep the following records specifically relating to student-learners employed at subminimum wage rates.

(a) Any worker employed as a student-worker shall be identified as such on the payroll records, with each student-learner's occupation and rate of pay being shown;

(b) The employer's copy of the application, which is serving as a temporary authorization must be available at all times for inspection for a period of three years from the last date of employment of the student-learner; and

(c) Notations should be made in the employer's records when additional hours are worked by reason of school not being in session.

Duration of Certificates. A special student-learner certificate may be issued for a period not to exceed the length of one school year unless a longer period is found to be justified by extraordinary

circumstances. No certificate shall authorize employment training beyond the date of graduation.

Application for Student-Learner Certificate Form. The Appendix contains a sample of the application for a certificate to employ a student-learner. It has been filled in with the required information (a hypothetical case). This should serve as a guide in the completion of the application under actual conditions, Appendix pages 68 - 70.

Suggested Chronological Procedures For Setting Up and Carrying Out the Training Program.

January

1. Familiarize school personnel with the proposed program and secure their approval and support.
2. Survey the community to locate agricultural businesses, determine existing job titles, and the agricultural competencies needed.

February

1. Publicize the program to create student interest.
2. Organize the advisory committee, establish policies regarding students and training centers, and publicize the program.
3. Survey the students to determine their occupational objectives.
4. Interview the students and their parents to determine their cooperation and sincerity of purpose -- select desirable students.

March

1. Secure cooperation of businesses that afford training in the desired occupations for the following year.
2. Secure the advisory committee's approval of the training station to be used.
3. Assist the students in scheduling classes for the following year.

April

1. Draw up training plans and courses of study for individual students.

May

1. Carry out an evaluation of the previous year's program by all concerned.

June-July-August

1. Place students in their training stations and begin their actual training.
2. Provide close supervision until student and employer become adjusted, visiting each student approximately once each week.

September through May

1. Provide instruction in the classroom pertaining to the student's training program.
2. Provide supervision of the work experience program at monthly intervals and more often in cases where problems may occur.

STEP II

INITIATING THE WORK EXPERIENCE PROGRAM

Assuming that the necessary groundwork has been laid through a thorough job of planning, the next procedure is that of initiating or actually getting the program underway. Several activities are involved in actually beginning the work experience program, although there may be some overlapping in actual practice, an attempt has been made to present the procedures in chronological order.

Publicity

Students should be made aware of the work experience program and the opportunities it presents. To a large extent this may be accomplished in the classroom, however, school assemblies as well as the school newspaper will also serve effectively in informing those who may not already be studying vocational agriculture.

The general public should also be informed as to the expanded purpose of vocational agriculture as they will be instrumental in the program later on, this of course may be accomplished through frequent use of the newspapers, radio and television. Teachers should find greater success in launching their programs if some effort has previously been made to acquaint the community with the proposed modifications. Community support is essential and through a good publicity program much interest and support can be aroused.

Organizing the Advisory Committee

An advisory committee is a requirement of a successful work experience placement program in vocational agriculture. Any teacher

will find the backgrounds of those representing the various agricultural occupational families a source of valuable assistance. It would be wise when possible to select no less than one representative from each of the major occupational areas previously mentioned in the introduction.

Method of Appointing the Committee. To lend weight to the selection, it would be good when possible to have the committee members appointed by the superintendent. They should, however, be recommended by the vocational agriculture teacher. Members should be appointed for one year and reappointed only after they have demonstrated desirable participation.

Qualities of Members. Some of the desirable qualities of the members are that they should:

1. Be familiar with certain agriculturally related businesses.
2. Be influential persons who have the respect of the community.
3. Understand the program of vocational agriculture.
4. Understand the non-farm work experience program.
5. Be a cooperative person who works well with others.
6. Be willing to perform the work of the committee.

Representation on the Committee. Certain representation is desirable, the committee will most likely be effective if it is not too large. Some guidelines are as follows:

1. Composed of representatives from each agricultural occupational family.
2. Approximate size, around 12 members.

3. School should be represented by the teacher of vocational agriculture and possibly one administrator.

4. Training centers should be represented by one or two members (employers or student trainee supervisors).

Duties and Functions of Committee. No committee functions properly unless it has some clearly defined responsibilities and definite assignments of duty. Some of these are:

1. To advise upon approval or rejection of centers
2. To aid in planning a sound course of study for students.
3. To assist in informing the public.
4. To relay public opinion to the instructor.
5. To assist in locating new centers.
6. To assist in securing teaching aids, reference material, equipment, etc.
7. To review criteria for selecting training centers.
8. To render counsel and assistance on special problems and new undertakings.
9. To assist in adapting the program to changing conditions.
10. To review wages and make recommendations.
11. To evaluate program periodically and suggest adjustments.

Meetings of the Committee. The number of meetings held is not as important as the effectiveness of the meetings which are held. Each meeting should have a definite purpose, unless a definite reason exists no meeting of the committee should be called. Probably most meetings will be "called meetings" and it is questionable whether,

after the program is underway, there would be any need for "regular" meetings.

First Meeting.

(a) The vocational agriculture teacher should arrange for the initial meeting, plan the agenda and serve as the temporary chairman.

(b) Though some of the members will be familiar with the proposed program, he should review it for all.

(c) He should be certain that each member fully understands and agrees to carry out his duties and responsibilities.

(d) He should impress the committee with the nature of the advisory committee, that of advisory capacity.

(e) The committee should then elect a permanent chairman.

(f) Usually, in order to relieve members of necessary record keeping and paper work, the vocational agriculture teacher serves as secretary.

(g) Some of the later meetings should involve reports on:

(1) Enrollment

(2) Prospective training centers

(3) Progress of students

(4) General problems, etc.

(h) To insure good attendance, convenient dates should be selected for meetings, written notices of the meetings should be mailed shortly before meeting is to be held.

Selecting the Students

In choosing those students who are to be accepted for training in the work experience program, there are certain factors the teacher should consider.

First of all, the participants should possess the qualifications stipulated previously in discussing policies related to students. Once it has been ascertained that there are no short-comings in this area, the teacher should review the student's information sheet to determine the applicant's interests, dislikes, occupational objectives and records pertaining to his individual analysis.

Other factors should also be given careful attention in the selection of students for participation in the training program. It should be kept in mind that these students are actual representatives of the vocational agriculture department and the school. With that in mind care should be taken to select trainees who will be a credit to the program. This is not to say that the scholarship of the enrollee is of utmost importance, rather the character and sincerity of purpose are possibly even more important than is his academic prowess.

Certain employment situations require varying degrees of academic ability, the student should possess the necessary mental ability for understanding and performing the tasks involved in his particular training program. Often educators may mistake this type of program for one which is primarily intended for those who have little academic ability. This is not the case although it may

certainly provide opportunity for students of this calibre as well as the brighter group.

Some other points should be used as factors in accepting the student for placement in the work experience program. The parents' support should be secured. They should understand the purposes of the program and approve of the objectives which are to be attempted.

The student should not be handicapped physically in any way which would prevent him from being able to carry out his duties.

His school attendance and punctuality may be reviewed by the teacher as a basis for predicting how responsible the student will be in his training situation.

Of necessity the students selected will also be determined by the opportunities offered which are accessible. No student should be received into the placement program if there is no training station available to give him training in his occupational objective, however, there may exist other opportunities which the student might benefit from almost as satisfactorily and he should be given the opportunity of deciding on an alternative training situation.

Selecting the students should involve the following:

1. Informing the students. Approximately six weeks before registration those students who have completed two years of vocational agriculture should be assembled for an orientation and have the program explained to them.

2. Filing of applications. After the student has received explanation of the purposes and objectives of the work experience

program, those who are interested should be given applications to complete requesting enrollment in the program, Appendix pages 66 - 67.

3. Screening of applicants. During the period of time following application for enrollment the teacher should personally interview each student and his parents giving particular consideration to the above points in an attempt to determine the acceptability of the student.

4. Informing the applicants. The students who have applied for enrollment in the program should be informed before pre-registration as to their acceptance. Those who are deemed well suited will then be able to register for the course. Those who for any reason cannot be placed should be counselled with and be made aware that they will not be placed in training stations and given the opportunity of electing another subject. If, however, they still desire to remain in the program, they should be required to have some other type of supervised activity and will receive such instruction as would be most fitting in light of their occupational objective.

Orientating the Parents

After familiarizing the students with the opportunities of the work experience program, the teacher should arrange for a meeting with the parents to determine their willingness to cooperate. Their approval and understanding is essential before the teacher attempts to establish a training station for a student.

One of the points which should be understood by parents first of all is that the purpose of the program is to train students for a particular occupation. The earning potential of the program is a secondary consideration. Parents should also be familiar with the restrictions imposed upon the student-learners by state and federal authority regarding placement and working hours.

Parents must accept the responsibility for assuring that the student meets his obligations to both the school and his employer. In addition, the necessary transportation arrangements for the students must be provided by the parents.

Establishing the Training Station

So that the training may be effective and worthwhile, the teacher should have some definite guidelines to follow in selecting training stations. Poor situations should be avoided if the program involving job placement is to succeed.

One of the important functions of the advisory committee is in assisting in the selection of the training centers. In order for the committee to serve effectively, the teacher should prepare a list of the types of training the students desire. The committee should then be able to select centers appropriate for the training. The following points should be kept in mind when deciding upon the desirability of the training station.

The center:

1. Must provide an approved occupation.
2. Should provide training, not merely employment.

3. Should involve training in all phases of the occupation.
4. Should provide supervision by qualified personnel.
5. Should provide satisfactory working conditions.
6. Should be a reputable company in the community.
7. Must have a good moral climate.
8. Should be interested in the student's training.
9. Employees should understand and appreciate the program.
10. Should be willing to provide adequate number of training hours.
11. Should lay off no regular employee to provide opportunity for student trainee.
12. Should offer opportunity in developing the student's ability to the point that he would be occupationally competent in another establishment.

In selecting the training station, or center, the committee should complete evaluation sheets for each center. These forms should be reviewed each year and brought up to date. In the event of any unusual situations, explanation should be given under "Remarks." If any center agrees to cooperate and then is not approved, the committee should advise the employer of the reason so that he may correct the condition. This should be done so that the prospective center could be used at a future time. This form is in the Appendix on page 71.

Employers should be recognized when they agree to and are approved for student-training. This may be done by the presentation of a certificate or plaque suitable for display in their establishment.

Assisting Students in Scheduling Classes

In initiating the work experience program another arrangement which the teacher should attempt to coordinate is the scheduling of the student's classes. It should be understood that the student's participation in the work experience program will be governed primarily by his academic schedule. In other words, his working hours must be adapted to fit his school program. By wise scheduling assistance, however, the teacher can usually adjust the student's classes so as to afford the maximum utilization of his opportunities.

Setting up Courses of Study and Training Plans

The courses of study should be set up at the beginning of the work experience program. This is an individually prepared outline containing such technical units of instruction as are deemed necessary in the occupation which the student has selected. This course is tentatively drawn up and will likely be revised and supplemented over the months during which the student is receiving training. It should, however, present a systematic proposal of the courses to be followed and studied so that the student may be able to identify his problem areas and thus strengthen his abilities for job performance.

The training schedule is an outline of the training program which the student is to be engaged in and the provisions by which he will be governed. It should be approved by all concerned. This schedule proposes the training the student is to receive during the year, stating the jobs to be learned and the approximate amount of time to

be spent in each. These jobs will involve the manipulative skills, knowledge and abilities which make up the occupation.

As the student completes the planned courses of study and the planned training plan, a notation should be made in the two outlines so that a current record of his progress may be maintained. This record should also be transferred to his Supevised Work Experience Record Book. Instruments for use in developing the courses of study and outlining the training plan as well as keeping a record of the hours planned and completed in each are provided in the Appendix on pages 75 - 76.

Securing Work Permits and Certificates for Student-Learners

Before actually placing the student in the training station, the teacher should have him secure a work permit. The local school superintendent is responsible for issuing the permit. In cases where a student-learner certificate is needed, the procedures have been outlined in pages 20 through 32. Failure to secure these authorizations will immediately jeopardize the program. It is therefore of utmost importance that the teacher not neglect this step in initiating the program.

STEP III

SUPERVISING THE WORK EXPERIENCE PROGRAM

Once the student has been placed in a training station the need for supervision becomes immediate. The most critical supervision is that of the employer or trainee supervisor. He should begin showing and explaining to the student those skills and procedures necessary in the performance of his duties.

The early stages of the training situation also demand more supervisory attention from the teacher. He should stay abreast of what the student is experiencing in the training center and thus be able to give intelligent assistance in the classroom phase of the instructional program.

One of the reasons for recommending that the work experience program enroll only approximately ten students per class is to permit the teacher thirty minutes each week for consultation with each student regarding his specific training program. This form of supervision can be quite beneficial in validating the student's training program. The student will have an opportunity to present his individual problems. This will afford the teacher the necessary insight into these areas which otherwise might escape his attention. Timely suggestions and meaningful assistance on the part of the teacher are important in a dynamic program of this nature. The lack of opportunity for constructive supervision at the time it is needed can lead to a steadily worsening situation which could most likely be avoided if anticipated in time.

Employer's Responsibility for Supervision

The importance of the contribution toward the student's learning made by the training supervisor cannot be overemphasized. He is the key man in the training program in assuring the making of the student a well prepared individual, capable of entering the work world with a valuable understanding of his selected occupation.

The employer, after having assisted in setting up the training outline, should provide instruction in such a manner that it will be understood by the student. He should see that no step, job operation, or procedure is omitted. It is to be expected that a certain amount of overlapping will occur as the students are trained in the various jobs. Therefore it is not intended that the student receive only specific instruction in one job at a time as they are listed in the training plan.

The underlying purpose of all supervision is to improve performance. This being the case then it is natural to expect that the supervision provided by the employer should be of such nature that this purpose will be acheived. The amount and type of supervision will doubtlessly have an effect upon how well the student performs his responsibilities. Certain basic characteristics of the student lend themselves well to a system of measurement by the employer. This evaluation can be understood by the teacher and it will pinpoint some areas in which he may help the student to improve. Thus it is suggested that a rating technique be devised whereby the teacher may determine just how well the student is developing on the job. This instrument

may also prove helpful in the actual grading of the student by the teacher as the marks which he receives in the course should reflect not only his classwork, but also that work which he performs in the training center. An instrument for this purpose is provided in the Appendix on pages 77 - 79.

Teacher's Responsibility for Supervision

The agriculture teacher should not depend wholly upon the employer for the supervision of the student in the training situation. The instructor should make training station visitations frequently. The exact number of visits cannot be predicted because of variations in the number of problems that arise in any given situation, variations in the calibre of the student, variations in the adequacy of training supervision provided by the firm, and the like. Largely, the supervision of the teacher will consist of observation and require frequent consultation with the employer in an attempt to determine whether satisfactory progress is being made by the student-learner.

Some visitations are routine and others result from problems reported by the student or employer. In the event dissatisfaction occurs on the part of the student-learner or the job supervisor during the program to the extent that the educational objectives of the student, the reputation of the program, or the successful operation of the business is in jeopardy, a three-way conference should be held among the teacher, the job supervisor, and the student. A positive solution is desirable. If that is impossible, then the student should be removed from the training station at the most opportune time.

There may be a tendency on the part of the agriculture teacher to assume that the training station personnel know their responsibilities for on-the-job instruction and will carry them out efficiently. Unfortunately, employers and employees often may tend to neglect their responsibilities for instruction of the student. Improving instruction at training stations is a continuous task for the coordinator, particularly as personnel are changed and as individual student-learners grow and develop.

The teacher should, when making his routine supervisory visits, take note of any points of any situations which call his attention to needs of the student and be able to make suggestions for improvement. The instructor will also find that students will respond usually by even greater effort when the teacher recognizes any strong points and compliments them accordingly. It is just as important that these notations also be made for future use. Possibly a check-list could be developed for use in the student visitation practice, however, probably simply a diary of observations would serve as well to record impressions of the visit. As a rule of thumb the effective teacher-coordinator should attempt to make no less than one visit per month and devote at least a half hour per week per student for conferences pertaining to his individual work experience in the training station.

In connection with supervision, the teacher should see to it that the student keeps a current record of his hours and earnings while participating in the program. To some degree, his progress and the employers satisfaction are reflected by this record. A form to serve this purpose will be found in the Appendix on page 80.

STEP IV

EVALUATING THE WORK EXPERIENCE PROGRAM

Evaluation is a logical procedure for improving any educational program. By evaluation teachers are able to identify the strengths and weaknesses of what they are doing and attempting to do in the occupational training of the students. Sound evaluation must be based upon a clear understanding of the objectives of the program and their relationship to the school and community.

The objectives of the local program must fit in with the objectives of the state and national programs to be acceptable. Thus the teacher should understand just what these objectives are if he is to be able to evaluate the program effectively. The total vocational agriculture program for high school students has been expanded to include some objectives which it formerly did not consider. Those now recognized are:

1. To train for proficiency in farming.
2. To train for entry into agricultural occupations other than farming.
3. To provide education and supervised experiences for students who are preparing for professional agricultural occupations requiring college training.

In this work, however, the primary interest is in the evaluation of only the work experience program in non-farm agricultural occupations. The objectives of this part of the total program include

only the second and third of the above objectives. In evaluating the work experience program several points should be considered, not only from the teacher's stand-point but also from others involved.

Before instruments of evaluation are reviewed, it may be wise to recognize that there are some significant questions which need to be answered. Some of these are:

1. What number of students have acquired salable skills?
2. What number of students are placed successfully in related jobs?
3. Is occupational guidance provided for students during the four year vocational agriculture program?
4. Is there an instructional program with co-ordinated work experience training?
5. Is there favorable reaction to the program from school personnel, students, parents and people in agri-business?
6. Is training provided at all levels of employment -- professional, technical, agricultural service, managerial, supervisory sales, clerical, skilled semi-skilled?
7. Is there a reasonable number of students being served to justify the cost of the program?
8. Is the program being provided that will fit into the educational system of the school?
9. Is there an effective follow-up of the former students?
10. What has been done to keep the public informed of the progress of the program?

11. Is the program being evaluated frequently?

Evaluation in non-farm work experience programs should consist of program evaluation by the teacher, the student, former student, the employer and the advisory council.

Program Evaluation by the Teacher

Teachers should find a thorough evaluation of the work experience program beneficial in many respects. It should prove quite helpful in program planning in that it would point out areas of weakness and those which have strengths thus permitting the teacher to improve the program from year to year. By evaluating the program from year to year the teacher will be better able to discuss the shortcomings and accomplishments with school administrators and others who may be interested. Valid judgment can only be based upon actual true evaluation, without which conclusions are apt to be erroneous and misleading. Since the work experience program involves several groups of people it is essential that each of these groups participate in the evaluation, thus giving an insight into how well the program is developing from the various vantage points. An instrument for the teacher's evaluation of the program will be found in the Appendix on page 81 - 82.

Program Evaluation by the Student

Since the primary purpose of the non-farm work experience program is to serve the student in preparing him for an occupational objective it is important that teachers secure his opinion of how well his needs are being met. No one of the other groups will better be

able to determine this on an individual basis than those students which are involved. Of course, their opinions will be limited in scope in that they will evaluate the program only as to how well it is meeting their individual needs, this judgment is of no less importance, however, since the purpose of the program is to provide worthwhile learning experience to all involved. This evaluation will also be of benefit in indicating to the teacher problems of which otherwise he would not be aware. The Appendix contains a suggested instrument for obtaining this information on pages 83 - 85.

Program Evaluation by Former Students

Follow-up evaluation is of importance in that the purpose of the work experience is to prepare the student for work in later life. How well the program is accomplishing this objective can best be determined through the opinions of those students who have completed the program and graduated from high school. The teacher should remain in contact with those students following their high school graudation and in a reasonable length of time after they have been employed secure their evaluation of the work experience program. An instrument for such an evaluation is contained in the Appendix, see pages 86 - 87.

Program Evaluation by Employers

The employer is involved in the rating of students each six weeks to determine how well the student is progressing and again at the end of the year to evaluate the total progress made by the student during the year. This evaluation or rating, however, does not involve

the evaluation of the total program. The light in which the employer sees the total program is significant in that he is in a position to offer constructive suggestions for improving the program in such a way to contribute to the effectiveness of the classroom instruction in meeting the specific needs of the student. The employer evaluation consists primarily in his judgment of the instructional areas. He should rate the areas as to their importance in contributing to the successful training for a person engaged in the various occupations involved in his business. This evaluation should be determined at the time of placing the student in the business to thereby enable the teacher to effectively draw up a course of study for the student to follow. The next type of evaluation to be made by the employer is one for appraising the work experience program in general. By conscientiously explaining the importance of these evaluations, the teacher will be able to convince the employer of their value in making the entire program more meaningful both to the student and to the others concerned. As has been emphasized previously good rapport is essential between the teacher and the employer. Without favorable communication, valid evaluation by the employer will be difficult to obtain and thus handicap the effectiveness of the work experience program. Instruments for conducting the above evaluations are also offered in the Appendix on pages 88 -- 90.

Program Evaluation by the Advisory Committee

The non-farm work experience program will be evaluated to some extent by the general public. Probably the persons most nearly representing this group will be the advisory committee. Since they are instrumental in developing good public relations their judgment and opinions are highly desired. This committee is also important in the development of policy regarding the program so it becomes even more essential that they are involved in the evaluation. The make-up of this group will largely determine their ability to make this appraisal, therefore it becomes essential, for the most part at any rate, the committee be composed of people who are involved in the program and are interested in its success. To a large extent their evaluation will be based upon a study of evaluations of the others concerned with the program, therefore it should only be undertaken after the other studies have been completed. An instrument for the committee's evaluation of the total program is included in the Appendix on page 91 - 92.

APPLICATION FOR A CERTIFICATE TO EMPLOY A STUDENT-LEARNER

The certification of the appropriate school official on the reverse side of this application shall constitute a temporary authorization for the employment of the named student-learner at less than the statutory minimum wage applicable under Section 6 of the Fair Labor Standards Act of 1938 as amended, or at wages below the applicable Walsh-Healey Public Contracts Act minimum wage determination effective from the date this application is forwarded to the Divisions until a Student-Learner Certificate is issued or denied by the Administrator or his authorized representative, provided the conditions specified in Section 520.6(c)(2) of the Student-Learner Regulation (29 CFR 520) are satisfied.

PLEASE READ CAREFULLY THE INSTRUCTIONS FOR COMPLETING THIS FORM.
PRINT OR TYPE ALL ANSWERS

1. Name and address of establishment making application: Jones' Nursery Anytown, Louisiana	3. Name and address of student learner: John Doe Route 1 Anytown, Louisiana
2. Type of business and products manufactured, sold or services rendered: Nursery, Production and Sale of nursery stock; landscaping	4. Name and address of school in which student-learner is enrolled: Anytown High School Anytown, Louisiana

INFORMATION ON SCHOOL INSTRUCTION

5. Number of weeks in school year	36	11. Are Smith-Hughes Act or George-Barden Act funds used for this program?(Yes or No)	
6. Total hrs of school instruction per week	25	12. Was this program authorized by the State Board for Vocational Education? (Yes or No)	
7. Number of hrs of directly related employment training	5		
8. Proposed beginning date of employment	7/9/66	13. If the answer to item 12 is No, give the name of the recognized local educational body which has approved this vocational training program:	
9. Proposed ending date of employment	7/1/67		
10. Proposed graduation date of Student-learner	May 1967		

(continued)

APPLICATION FOR A CERTIFICATE TO EMPLOY A STUDENT-LEARNER (cont'd)

14. Outline the school instruction directly related to the employment training. (List courses, etc.)
    1. Plant identification
    2. Soils and Fertilizers for Nursery stock
    3. Propogation
    4. Pruning, grafting & budding
    5. Heat, light, water & humidity requirements
    6. Insect & disease control
    7. Nursery equipment
    8. Landscape design

Information on employment training at special minimum wages:

15. How is employment training scheduled? (weekly, alternate weeks, etc.) weekly	19. Title of student-learner occupation: Nursery man	
	20. Number of employees in this establishment.	7
16. Number of weeks of employment training at special minimum wage. 36	21. Number of experienced employees in student-learner's occupation shown in 19	2
	22. Minimum hourly wage rate of experienced workers in 21	1.75
17. Number of hours of employment training a week. 15	23. Is an age or employment certificate on file in this establishment for this student-learner? (If no, see instructions)	yes
18. Special minimum wage (s) to be paid student-learner (if a progressive wage scale is proposed, enter each rate & specify the periods during which it will be paid): $ .95 per hr.-1st 12 weeks; 1.05 per hr.-2nd 12 weeks; 1.15 per hr.-3rd 12 weeks	24. Is it anticipated that the student-learner will be employed in the performance of a Government contract subject to the Welsh-Healey contract?	no

25. Outline training on-the-job (describe briefly the work process in which the student-learner will be trained and list the types of machine used).
    1. Propagating trees, shrubs vines or flowering plants.
    2. Pruning
    3. Controlling Insects & Diseases
    4. Regulating heat, water, light, humidity
    5. Soil & fertilizer requirements
    6. Planting seeds & cuttings
    7. Grafting and budding
    8. Purchasing stock & equipment
    9. Preparing for shipment & sale
    10. Repairing & maintaining equipment
    11. Merchandizing & bookkeeping
    12. Landscape design

EMPLOYER EVALUATION OF STUDENT-LEARNER IN VOCATIONAL AGRICULTURE

Name_____

Business_____

Date_____

Please check the appropriate blanks.

APPEARANCE

_____Appearance is an asset to business
_____Usually neat in appearance
_____Appearance needs improvement
_____Appearance is a detriment to business

PUNCTUALITY

_____Always on time
_____Usually on time
_____Occasionally late
_____Frequently late

ATTENDANCE

_____Usually regular in attendance
_____Seldom absent
_____Occasionally absent
_____Frequently absent

DEPENDABILITY

_____Reliable in following instructions
_____Usually follows instructions
_____Sometimes careless in following instructions
_____Cannot be relied upon to follow instructions

INTEREST IN WORK

_____Usually enthusiastic about work
_____Shows interest in work most of time
_____Interested in certain phases
_____Lacks interest in work

SUGGESTIONS FOR IMPROVEMENT

JUDGMENT

_____Wise in actions and in making decisions
_____Usually shows sound judgment
_____Sometimes shows lack of judgment
_____Demonstrates poor judgment

CUSTOMER RELATIONS

_____Is remembered favorably by customers
_____Customer reaction is pleasant
_____Customer reaction is indifferent
_____Customer relations need improvement

PERFORMANCE

_____Exceeds employee expectation
_____Meets employee expectations
_____Sometimes meets expectations
_____Fails to meet employee expectations

INITIATIVE

_____Recognizes work to be done and does it without being told
_____Sometimes goes ahead in work not assigned
_____Seldom seeks work beyond regular routine duties
_____Sometimes shirks duties

COOPERATION

_____Works unusually well with others
_____Cooperates well, shows willingness
_____Helps when asked
_____Pulls against others
_____Solicits and receives constructive cooperation of others
_____Tends to lead others in right direction
_____Occasionally uncooperative
_____Makes no effort to work with others

OVERALL RATING OF EMPLOYMENT SUITABILITY
(Based on assumption that you needed an employee)

_____I would be eager to hire him.
_____I would be pleased to hire him.
_____I would hire him.
_____I would hire him temporarily.
_____I would not hire him.

EMPLOYER'S PERIODIC RATING FOR TRAINEES IN AGRICULTURAL OCCUPATIONS

Trainee_____ Date_____

Training Center_____ Rated by_____

DIRECTIONS: Please circle one of the numbers (from 1 through 10) opposite each of the five factors in the lefthand column which you think most mearly indicates the trainee's rating for the past six weeks school period.

	UNSATISFACTORY	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	EXCELLENT
PROGRESS	1 2	3 4	5 6	7 8	9 10
Has he advanced in skill and knowledge during the past 6 weeks?	Has made almost no progress	Has progressed in only a few phases of his training	Has made average progress in his training	Has advanced beyond expectations	Exceptional progress in skills and knowledge
INITIATIVE	1 2	3 4	5 6	7 8	9 10
Can he originate and carry through on ideas?	Has to be told everything to do	Seldom goes ahead on his own	Goes ahead on routine matters	Frequently looks for additional work to do	Always finding jobs that need to be done
RELIABILITY	1 2	3 4	5 6	7 8	9 10
Can the student be depended upon in his work?	Can seldom be relied upon	Frequently fails to come through	Can be relied upon in most cases	Only occasionally fails to come through	Can be relied upon implicitly in all matters
WORK ATTITUDE	1 2	3 4	5 6	7 8	9 10
Does he have a good attitude toward his work?	Bored: shows little enthusiasm	Rationalizes his shortcomings and mistakes	Normally enthusiastic about his work	Tries to improve his work in most cases	Is always alert to finding ways to improve work
COOPERATION	1 2	3 4	5 6	7 8	9 10
Does he work well with others?	Always wants his own way; is hardheaded	Hard for others to work with	Usually congenial and easy to work with	Works well with his associates	Cooperates fully in all matters

Note: A similiar form should be attached to the student's copy of training plan and filled out at the end of each week.

TEACHER EVALUATION OF TOTAL NON-FARM

WORK EXPERIENCE PROGRAM IN

VOCATIONAL AGRICULTURE

CURRENT INFORMATION: ON HIGH SCHOOL PUPILS:

1. Each class has an up to date course of study . . . . _____
2. Percent of class time used for supervised study. . . _____
3. Percent of teaching directly related to student's supervised non-farm agricultural occupation training programs . . . . . _____
4. Percent of teaching directly related to student's job problems . . . . . _____
5. Percent of teaching directly related to F.F.A. activities and leadership training . . . . . _____
6. Number of students enrolled in vocational agriculture non-farm work experience program:

   Juniors _____

   Seniors _____

   Total _____

   This total is what percent of the total enrollment in vocational agriculture? _____%
7. Number of different occupations in which students are being trained . . . . . _____

List of training centers	Number placed in each
a._____	_____

FORMER STUDENT EVALUATION OF

NON-FARM WORK EXPERIENCE PROGRAM

IN VOCATIONAL AGRICULTURE

Name_____Date _____

Training Center_____

Dates of Training_____

1. What is your exact position? How long have you held this position? State your job duties and responsibilities.

2. Are you satisfied in your present position? _____. If your answer is "No", what position would you like to have, either in your present place of employment or in another business?

3. What is the next position to which you could be promoted in your present place of employment? What are the traits that your employer is looking for in the next possible position?

4. What requirements will you have to meet to be advanced to the next position?

5. Of what value was your high school training in vocational agriculture as it relates to your present work? How did it help you?

(continued)

FORMER STUDENT EVALUATION (cont'd)

6. What are some things that you are now encountering in your work for which you were not adequately trained in high school?

7. What should be added to or removed from the present vocational agriculture program?

EMPLOYER EVALUATION OF

COURSES OF STUDY IN

VOCATIONAL AGRICULTURE

What should your employee know in these agricultural areas to perform best in his present job? Rate each subject matter area to indicate:

VI - Very Important:	Worker regularly uses content of subject matter area.
I - Important:	Worker often uses content of subject matter area.
SI - Of Some Importance:	Worker sometimes uses content of subject matter area.
U - Unimportant:	Worker does not use content of subject matter area.

_____VI_____I_____SI_____U	1. Basic agricultural mechanics - use of common hand and power tools
_____VI_____I_____SI_____U	2. Welding and soldering - electric arc and oxy-acetylene gas welding, heating, brazing, cutting and soldering
_____VI_____I_____SI_____U	3. Safety - agricultural accidents associated with engineering and mechanics
_____VI_____I_____SI_____U	4. Agricultural engineering including farm power, machinery, drainage, irrigation, and buildings
_____VI_____I_____SI_____U	5. Animal Science - including feeds and feeding, breeding and management
_____VI_____I_____SI_____U	6. Insects, diseases, pests, and controls
_____VI_____I_____SI_____U	7. Crop production including plant propagation, management and weed control.

(continued)

EMPLOYER EVALUATION OF COURSES OF STUDY (cont'd)

_____VI_____I_____SI_____U 8. Food processing including dairy products, meats, cereals, fruits and vegetables

_____VI_____I_____SI_____U 9. Soil Science - including bacteriology, classification and erosion control of soil and fertilization

_____VI_____I_____SI_____U 10. Forestry including propagation, management and timber marketing

_____VI_____I_____SI_____U 11. Horticulture - including fruits, vegetables, landscaping, nursery production, maintaining parks and recreational areas

_____VI_____I_____SI_____U 12. Agricultural Economics - including farm management, credit, marketing, and agricultural policy

_____VI_____I_____SI_____U 13. Occupational experience - placement in occupation for job training experience

_____VI_____I_____SI_____U 14. Others - (please list)

If there are any subject matter areas which the teacher should offer instruction in please note them. Please offer any suggestions which you feel would improve the Non-Farm Work Experience Program.

ADVISORY COMMITTEE EVALUATION OF NON-FARM WORK EXPERIENCE PROGRAM IN VOCATIONAL AGRICULTURE

Point system: 5 = Excellent; 4 = Good; 3 = Average; 2 = Fair; 1 = Poor

1. The non-farm agricultural occupation placement programs of the students provided a satisfactory basis for teaching the related subjects important to the area.	5	4	3	2	1
2. The non-farm placement programs are resulting in sound student-business relationships with the parents, school officials and employers.	5	4	3	2	1
3. Meaningful non-farm training programs are provided for those students who enroll and are placed on the job.	5	4	3	2	1
4. Upon graduation the students completing the program possess salable skills.	5	4	3	2	1
5. The educational objectives of vocational agriculture and of non-farm agricultural occupational training have been met in the program.	5	4	3	2	1
6. There is evidence of cooperation of the vocational agriculture department in promoting the welfare of the school.	5	4	3	2	1
7. School and community representatives are helping in evaluating and developing the program.	5	4	3	2	1
8. The vocational agriculture program is adjusting satisfactorily to changing conditions.	5	4	3	2	1
9. Substantial earnings and savings are made by students through their supervised experience programs.	5	4	3	2	1

(continued)

ADVISORY COMMITTEE EVALUATION (cont'd)

10. The classroom arrangement, condition, and appearance provides a desirable learning environment.	5	4	3	2	1
11. The reference library materials for students' use are adequate and up-to-date.	5	4	3	2	1
12. Summary evaluation: To what extent does the supervised agriculture occupational training programs for students in vocational agriculture provide purposeful training and experiences in the non-farm agriculture related businesses leading to employment in a non-farm agricultural occupation?	5	4	3	2	1

Suggestions for improvement of the non-farm work experience program.

HAZARDOUS OCCUPATIONS

(NOTE) (This section is taken from portions of Child Labor Bulletin No. 101 "A Guide to Child Labor provision of the Fair Labor Standards Act")

The Fair Labor Standards Act Provided a minimum age of 18 years for any occupation which the Secretary of Labor "shall find and by order declare" to be detrimental to the health or well-being of young workers or particularly hazardous for them.

The 17 hazardous occupations orders now in effect apply in some cases on an industry basis, specifying the occupations in the industry that are not covered, and in some cases on an occupational basis irrespective of the industry in which found. Seven of the hazardous occupations orders that have been issued (Orders Nos. 5, 8, 10, 12, 14, 16, and 17) contain exemptions for apprentices and student-learners when employed under the conditions set forth in the exemptions contained in the orders. The orders in effect do not apply to employment in agriculture.

HAZARDOUS OCCUPATIONS ORDERS

Those occupations declared to be particularly hazardous for minors between 16 and 18 years of age are included in the seventeen Hazardous Occupations Orders listed below:

ORDER NO. 1

MANUFACTURING OR STORAGE OCCUPATIONS INVOLVING EXPLOSIVES

The following occupations in or about plants or establishments manufacturing or storing explosives or articles containing explosive components:

(1) All occupations in or about any plant or extablishment (other than retail establishments or plants or establishments of the type described in sub paragraph 2) manufacturing or storing explosives or articles containing explosive components except where the occupation is performed in a "non-explosives area" as defined in sub paragraph 3.

(2) The following occupations in or about any plant or establishment manufacturing or storing small-arms ammunition not exceeding .60 caliber in size, shotgun shells, or blasting caps when manufactured or stored in conjunction with the manufacture of small-arms ammunition:

(a) All occupations involved in the manufacturing, mixing, transporting, or handling of explosive compounds in the manufacture of small-arms ammunition and all other

occupations requiring the performance of any duties in the explosives area in which explosives compounds are manufactured or mixed.

(b) All occupations involved in the manufacturing, transporting, or handling of primers and all other occupations requiring the performance of any duties in the same building in which primers are manufactured.

(c) All occupations involved in the priming of cartridges and all other occupations requiring the performance of any duties in the same workroom in which rimfire cartridges are primed.

(d) All occupations involved in the plate loading of cartridges and in the operation of automatic loading machines.

(e) All occupations involved in the loading, inspecting, packing, shipping and storing of blasting caps.

Definitions

The term "plant or establishment manufacturing or storing explosives or articles containing explosive components" means the land with all the buildings and other structures thereon used in connection with the manufacturing or processing or storing of explosives or articles containing explosive components.

The terms "explosives" and "articles containing explosive components" mean and include ammunition, black powder, blasting caps, fireworks, high explosives, primers, smokeless powder, and all goods classified and defined as explosives by the Interstate Commerce Commission in regulations for the transportation of explosives and other dangerous substances by common carrier.

(3) An area meeting all of the following criteria shall be deemed a "nonexplosives area".

(a) None of the work performed in the area involves the handling or use of explosives;

(b) The area is separated from the explosives area by a distance not less than that prescribed in the American Table of Distances for the protection of inhabited buildings;

(c) The area is separated from the explosives area by a fence or is otherwise located so that it constitutes a definite designated area; and

(d) Satisfactory controls have been established to prevent employees under 18 years of age within the area from entering any area in or about the plant which does not meet criteria in (a) through (c).

ORDER NO. 2

MOTOR-VEHICLE OCCUPATIONS

The occupations of motor-vehicle driver and helper.

Definitions

The term "motor vehicle" shall mean any automobile, truck, truck-tractor, trailer, semitrailer, motorcycle, or similar vehicle propelled or drawn by mechanical power and designed for use as a means of transportation but shall not include any vehicle operated exclusively on rails.

The term "driver" shall mean any individual who, in the course of his employment, drives a motor vehicle at any time.

The term "helper" shall mean any individual, other than a driver, whose work includes riding on a motor vehicle for the purpose of assisting in transporting or delivering goods, but shall not apply to an individual riding in a passenger-type motor vehicle.

ORDER NO. 3

COAL-MINE OCCUPATIONS

All occupations in or about any coal mine, except the occupation of slate or other refuse picking at a picking table or picking chute in a tipple or breaker and occupations requiring the performance of duties solely in offices or in repair or maintenance shops located in the surface part of any coal mining plant.

Definitions

The term "coal" shall mean any rank of coal, including lignite, bituminous, and anthracite coals.

The term "all occupations in or about any coal mine" shall mean all types of work performed in any underground working, openpit, or surface part of any coal-mining plant that contributes to the extraction, grading, cleaning, or other handling of coal.

ORDER NO. 4

LOGGING AND SAWMILLING OCCUPATIONS

All occupations in logging and all occupations in the operation of any sawmill, lath mill, shingle mill, or cooperage-stock mill except the following:

(1) Exceptions applying to logging:
   (a) Work in offices or in repair or maintenance shops.
   (b) Work in the construction, operation, repair, or maintenance of living and administrative quarters of logging camps.
   (c) Work in timber cruising, surveying, or logging-engineering parties; work in the repair or maintenance of roads, railroads, or flumes; work in forest protection, such as clearing fire trails or roads, piling and burning slash, maintaining fire-fighting equipment, constructing and maintaining telephone lines, or acting as fire lookout or fire patrolman away from the actual logging operations: Provided, that the provisions of this paragraph shall not apply to the felling or bucking of timber, the collecting or transporting of logs, the operation of power-driven machinery, the handling or use of explosives and work on trestles.
   (d) Peeling of fence posts, pulpwood, chemical wood, excelsior wood, cordwood, or similar products, when not done in conjunction with and at the same time and place as other logging occupations declared hazardous by this section.
   (e) Work in the feeding or care of animals.

(2) Exceptions applying to the operation of any permanent sawmill or the operation of any lath mill, shingle mill, or cooperage-stock mill; Provided, that these exceptions do not apply to a portable sawmill the lumber yard of which is used only for the temporary storage of green lumber and in connection with which no office or repair or maintenance shop is ordinarily maintained; and further Provided, that these exceptions do not apply to work which entails entering the sawmill building:
   (a) Work in offices or in repair of maintenance shops.
   (b) Straigntening, marking, or tallying lumber on the dry chain or the dry drop sorter.
   (c) Pulling lumber from the dry chain.
   (d) Clean-up in the lumberyard.
   (e) Piling, handling, or shipping of cooperage stock in yards or storage sheds, other than operating or assisting in the operation of power-driven equipment.
   (f) Clerical work in yards or shipping sheds, such as done by ordermen, tallymen, and shipping clerks.

Definitions

The term "all occupations in logging" shall mean all work performed in connection with the felling of timber; the bucking or converting of timber into logs, poles, piles, ties, bolts, pulpwood, chemical wood, excelsior wood, cordwood, fence posts, or similar products; the collecting, skidding, yarding, loading, transporting, and unloading of such products in connection with logging; the constructing, repairing, and maintaining of roads, railroads, flumes, or camps

used in connection with logging; the moving, installing, rigging, and maintenance of machinery or equipment used in logging; and other work performed in connection with logging. The term shall not apply to work performed in timber culture, timber-stand improvement, or in emergency fire-fighting.

The term "all occupations in the operation of any sawmill, lath mill, shingle mill, or cooperage-stock mill" shall mean all work performed in or about any such mill in connection with storing of logs and bolts; converting logs or bolts into sawn lumber, laths, shingles, or cooperage-stock; storing, drying and shipping lumber, laths, shingles, cooperage-stock, or other products of such mills; and other work performed in connection with the operation of any sawmill, lath mill shingle mill, or cooperage-stock mill. The term shall not include work performed in the planing-mill department or other remanufacturing departments of any sawmill, or in any planing mill or remanufacturing plant not a part of a sawmill.

ORDER NO. 5

POWER-DRIVEN WOODWORKING MACHINE OCCUPATIONS

The following occupations involved in the operation of power-driven woodworking machines:

(1) The occupation of operating power-driven woodworking machines including supervising or controlling the operation of such machines, feeding material into such machines, and helping the operator to feed material into such machines, but not including the placing of material on a moving chain or in a hopper or slide for automatic feeding.
(2) The occupations of setting up, adjusting, repairing, oiling, or cleaning power-driven woodworking machines.
(3) The operations of off-earing from circular saws and from guillotine-action veneer clippers.

Definitions

(1) The term "power-driven woodworking machines" shall mean all fixed or portable machines or tools driven by power and used or designed for cutting, shaping, forming, surfacing, nailing, stappling, wire stitching, fastening, or otherwise assembling, pressing, or printing wood or veneer.
(2) The term "off-bearing" shall mean the removal of material or refuse directly from a saw table or from the point of operation. Operations not considered as off-bearing within the intent of this section include:

(a) The removal of material or refuse from a circular saw or guillotine-action veneer clipper where the material or refuse has been conveyed away from the saw table or point of operation by a gravity chute or by some mechanical means such as a moving belt or expulsion roller, and

(b) The following operations when they do not involve the removal of material or refuse directly from a saw table or from the point of operation: the carrying, moving, or transporting of materials from one machine to another or from one part of a plant to another; the piling, stacking, or arranging of materials for feeding into a machine by another person; and the sorting, tying, bundling, or loading of materials.

Exemptions

Apprentices--This order shall not apply to the employment of apprentices in the occupations herein declared particularly hazardous: Provided, that

(1) The apprentice is employed in a craft recognized as an apprenticeable trade,

(2) The work of the apprentice training, is intermittent and for short periods of time, and is under the direct and close supervision of a journeyman as a necessary part of such apprentice training, and

(3) The apprentice is registered by the Bureau of Apprenticeship and Training of the United States Department of Labor as employed in accordance with the standards established by that Bureau, or is registered by a State agency as employed in accordance with the standards of the State apprenticeship agency recognized by the Bureau of Apprenticeship and Training, or is employed under a written apprenticeship agreement under conditions which substantially conform to such Federal or State standards as determined by the Secretary of Labor.

Student-Learners--This order shall not apply to the employment of a student-learner in occupations herein declared particularly hazardous: Provided, however, that such a student-learner is enrolled in a course of study and training in a cooperative vocational training program under a recognized State or local educational authority or in a course of study in a substantially similar program conducted by a private school: Provided, further, that such student-learner be employed under a written agreement which shall provide:

(1) That the work of the student-learner in the occupations herein declared hazardous shall be incidental to his training, shall be under the direct and close supervision of a qualified and experienced person;

(2) That safety instruction shall be given by the school and correlated by the employer with on-the-job training; and
(3) That a schedule of organized and progressive work processes to be performed on the job shall have been prepared. Such a written agreement shall carry the name of the student-learner, and shall be signed by the employer and the school coordinator or principal. Copies of the agreement shall be kept on file by both the school and the employer. This exemption for the employment of student-learners may be revoked in any individual situation wherein it is found that reasonable precautions have not been observed for the safety of minors employed thereunder.

ORDER NO. 6

OCCUPATIONS INVOLVING EXPOSURE TO RADIOACTIVE SUBSTANCES AND TO IONIZING RADIATIONS

Any work in any workroom in which (a) radium is stored or used in the manufacture of self-luminus compound; (b) self-luminus compound is made, processed, or packaged; (c) self-luminus compound is stored, used, or worked upon; (d) incandescent mantles are made from fabric and solutions containing thorium salts, or are processed or packaged, (e) other radioactive substances are present in the air in average concentrations exceeding 10 percent of the maximum permissible concentrations in the air recommended for occupational exposure by the National Committee on Radiation Protection, as set forth in the 40-hour week columnof table one of the National Bureau of Standards Handbook No. 69 entitled "Maximum Permissible Body Burdens and Maximum Permissible Concentrations of Radionuclides in Air and in Water for Occupational Exposure," issued June 5, 1959.

Definitions

As used in this section: the term "self-luminous compound" shall mean any mixture of phosphorescent material and radium, mesothorium, or other radioactive element; the term "workroom" shall include the entire area bounded by walls of solid material and extending from floor to ceiling; the term "ionizing radiations" shall mean alpha and beta particles, electrons, protons, neutrons, gamma, and X-ray and all other radiations which produce ionization directly or indirectly, but does not include electromagnetic radiations other than gamma and X-ray.

ORDER NO. 7

POWER-DRIVEN HOISTING APPARATUS OCCUPATIONS

The following occupations involved in the operations of power-driven hoisting apparatus:

(1) Work of operating an elevator, crane, derrick, hoist, or high-lift truck, except operating an unattended automatic operation passenger elevator or an electric or air-operated hoist not exceeding 1-ton capacity.

(2) Work which involves riding on a manlift or on a freight elevator, except a freight elevator operated by an assigned operator.

(3) Work of assisting in the operation of a crane, derrick, or hoist performed by crane hookers, crane chasers, hookers-on, riggers, rigger helpers, and like occupations.

Definitions

The term "elevator" shall mean any power-driven hoisting or lowering mechanism equipped with a car or platform which moves in guides in a substantially vertical direction. The term shall include both passenger and freight elevators (including portable elevators or tiering machines), but shall not include dumb-waiters.

The term "crane" shall mean a power-driven machine for lifting and lowering a load and moving it horizontally, in which the hoisting mechanism is an integral part of the machine. The term shall include all types of cranes, such as cantilever gantry, crawler, gantry, hammerhead, ingot-pouring, jib, locomotive, motor truck, overhead traveling, pillar jib, pintle, portal, semigantry, semiportal, storage bridge, tower, walking jib, and wall cranes.

The term "derrick" shall mean a power-driven apparatus consisting of a mast or equivalent members held at the top by guys or braces, with or without a boom, for use with a hoisting mechanism and operating ropes. The term shall include all types of derricks, such as a frame, breast, Chicago boom, gin-pole, guy, and stiff-leg derricks.

The term "hoist" shall mean a power-driven apparatus for raising or lowering a load by the application of a pulling force that does not include a car or platform running in guides. The term shall include all types of hoists, such as base-mounted electric, clevis suspension, hook suspension, monorail, overhead electric, simple drum, and trolley suspension hoists.

The term "high-lift truck" shall mean a power-driven industrial type of truck used for lateral transportation that is equipped with a power-operated lifting device usually in the form of a fork or platform

capable of tiering loaded pallets or skids one above the other. Instead of a fork, or platform, the lifting device may consist of a ram, scoop, shovel, crane, revolving fork, or other attachments for handling specific loads. The term shall mean and include high-lift trucks known under such names as fork lifts, fork trucks, fork-lift trucks, tiering trucks, or stacking trucks, but shall not mean low-lift trucks or low-lift platform trucks that are designed for the transportation of, and the tiering of, material.

The term "manlift" shall mean a device intended for the conveyance of persons which consists of platforms or brackets mounted on, or attached to, an endless belt, cable, chain or similar method of suspension; such belt, cable, or chain operating in a substantially vertical direction and being supported by and driven through pulleys, sheaves or sprockets at the top or bottom.

ORDER NO. 8

POWER-DRIVEN METAL FORMING, PUNCHING, AND SHEARING MACHINE OCCUPATIONS

The occupations of operator of or helper on the following power-driven metal forming, punching, and shearing machines:

(1) All rolling machines, such as beading, straightening, corrugating, flanging, or bending rolls; and hot or cold rolling mills.
(2) All pressing or punching machines, such as punch presses except those provided with full automatic feed and ejection and with a fixed barrier guard to prevent the hands or fingers of the operator from entering the area between the dies; power presses; and plate punches.
(3) All bending machines, such as apron brakes and press brakes.
(4) All hammering machines, such as drop hammers and power hammers.
(5) All shearing machines, such as guillotine or squaring shears: alligator shears; and rotary shears.

The occupations of setting up, adjusting, repairing, oiling, or cleaning these machines including those with automatic feed and ejection.

Definitions

The term "operator" shall mean a person who operates a machine covered by this Order by performing such functions as starting or stopping the machine, placing materials into or removing them from the machine, or any other functions directly involved in operation of the machine.

The term "helper shall mean a person who assists in the operation of a machine covered by this Order by helping place materials into or remove them from the machine.

The term "forming, punching, and shearing machines," shall mean power-driven metal-working machines, other than machine tools, which change the shape of or cut metal by means of tools, such as dies, rolls, or knives which are mounted on rams, plungers, or other moving parts. Types of forming, punching, and shearing machines enumerated in this section are the machines to which the designation is by custom applied.

Exemptions

Exemptions for apprentices and student-learners in Hazardous Occupations Order No. 5 apply also under this Order.

ORDER NO. 9

OCCUPATIONS IN CONNECTION WITH MINING, OTHER THAN COAL

All occupations in connection with mining, other than coal, except the following:

(1) Work in offices, in the warehouse or supply house, in the change house, in the laboratory, and in repair or maintenance shops not located underground.
(2) Work in the operation and maintenance of living quarters.
(3) Work outside the mine in surveying, in the repair and maintenance of roads, and in general clean-up about the mine property such as clearing brush and digging drainage ditches.
(4) Work of track crews in the building and maintaining of sections of railroad track located in those areas of open-cut metal mines where mining and haulage activities are not being conducted at the time and place that such building and maintenance work is being done.
(5) Work in or about surface placer mining operations other than placer mining operations.
(6) The following work in metal mills other than in mercury-recovery mills or mills using the cyanide process:
    (a) Work involving the operation of Jigs, sludge tables, flotation cells, or drier-filters.
    (b) Work of hand sorting at picking table or picking belt.
    (c) General clean-up work:

Provided, however, that nothing in this section shall be construed as permitting employment of minors in any occupation prohibited by any other hazardous occupations order issued by the Secretary of Labor.

Definitions

As used in this section: The term "all occupations is connection with mining, other than coal" shall mean all work performed underground

in mines and quarries; on the surface at underground mines and quarries; in or about open-cut mines, open quarries, clay pits, and sand and gravel operations; at or about placer mining operations; at or about dredging operations for clay, sand or gravel; at or about bore-hole mining operations; in or about all metal mills, washer plants, or grinding mills reducing the bulk of the extracted minerals; and at or about any other crushing, grinding, screening, sizing, washing or cleaning operations are performed as a part of a manufacturing process. The term shall not include work performed in subsequent manufacturing or processing operations, such as work performed in smelters, electro-metallurgical plants, refineries, reduction plants, cement mills, plants where quarried stone is cut, sanded and further processed, or plants manufacturing clay, glass, or ceramic products. Neither shall the term include work performed in connection with coal mining, in petroleum production, in natural-gas production, nor in dredging operations which are not a part of mining operations, such as dredging for construction or navigation purposes.

ORDER NO. 10

OCCUPATIONS INVOLVING SLAUGHTERING, MEAT PACKING OR PROCESSING, OR RENDERING

The following occupations in or about slaughtering and meat packing establishments, rendering plants, or wholesale, retail or service establishments are particularly hazardous for the employment of minors between 16 and 18 years of age or detrimental to their health or well-being:

(1) All occupations on the killing floor, in curing cellars, and in hide cellars, except the work of messengers, runners, hand-truckers, and similar occupations which require entering such workrooms or workplaces infrequently and for short periods of time.

(2) All occupations involved in the recovery of lard and oils, except packaging and shipping of such products and the operation of hard-roll machines.

(3) All occupations involved in tankage or rendering of dead animals, animal offal, animal fats, scrap meats, blood, and bones into stock feeds, tallow, inedible greases, fertilizer ingredients, and similar products.

(4) All occupations involved in the operation or feeding of the following power-driven meat-processing machines, including setting-up, adjusting, repairing, oiling, or cleaning such machines; meat and bone cutting saws, knives (except bacon slicing machines), head-splitters, and guillotine cutters; snout-pullers and jaw-pullers; skinning machines; horizontal rotary washing machines; casing-cleaning machines such as crushing, stripping, and finishing machines; grinding, mixing chopping, and hashing machines; and presses (except belly-rolling machines).

(5) All boning occupations.
(6) All occupations that involve the pushing or dropping of any suspended carcass, half carcass, or quarter carcass.
(7) All occupations involving hand-lifting or hand-carrying any carcass or half carcass of beef, or horse, or any quarter carcass of beef or horse.

Definitions

The term "slaughtering and meat packing establishments" shall mean places in or about which cattle, calves, hogs, sheep, lambs, goats, or horses are killed, butchered, or processed. The term shall also include establishments which manufacture or process meat products or sausage casings from such animals.

The term "rendering Plants" shall mean establishments engaged in the conversion of dead animals, animal offal, animal fats, scrap meats, blood, and bones into stock feeds, tallow, inedible greases, fertilizer ingredients, and similar products.

The term "killing floor" shall include that workroom or workplace where cattle, calves, hogs, sheep, lamb, goats, or dressed prior to chilling.

The term "curing cellar" shall include that workroom or workplace which is primarily devoted to the preservation and flavoring of meat by curing materials. It does not include that workroom or workplace where meats are smoked.

The term "hide cellar" shall include that workroom or workplace where hides are graded, trimmed, salted, and otherwise cured.

The term "boning occupations" shall mean the removal of bones from meat cuts. It shall not include work that involves cutting, scraping , or trimming meat from cuts containing bones.

Exemptions

The killing and processing of poultry, rabbits, or small game in areas phusically separated from the killing floor.

Exemptions for apprentices and student-learners in Hazardous Occupations Order No. 5 apply also under this Order.

ORDER NO. 11

POWER-DRIVEN BAKERY MACHINE OCCUPATIONS

The following occupations involved in the operation of power-driven bakery machines:

(1) The occupations of operating, assisting to operate, or setting up, adjusting, repairing, oiling, or cleaning any horizontal or vertical dough mixer; batter mixer; bread dividing, round, or molding machine; dough brake; dough sheeter; combination bread slicing and wrapping machine; or cake cutting band saw.

(2) The occupation of setting up or adjusting a cooky or cracker machine.

ORDER NO. 12

POWER-DRIVEN PAPER-PRODUCTS MACHINE OCCUPATIONS

The occupations of operating or assisting to operate any of the following power-driven paper-products machines:

(1) Arm-type wire stitcher or stapler, circular or bandsaw, corner cutter or mitering machine, corrugating and single- or double-facing machine, envelope die-cutting press, guillotine paper cutter or shear, horizontal bar scorer, laminating or combining machine, sheeting machine, scrap-paper baler, or vertical slotter.

(2) Platen die-cutting press, platen printing press, or punch press which involves hand feeding of the machine.

The occupations of wetting up, adjusting, repairing, oiling or cleaning these machines including those which do not involve hand feeding.

Definitions

The term "operating or assisting to operate" shall mean all work which involves starting or stopping a machine covered by this Order, placing materials into or removing them from the machine, or any other work directly involved in operating the machine.

The term "paper-products machine" shall mean power-driven machines used in the remanufacture or conversion of paper or pulp into a finished product. The term is understood to apply to such machines whether they are used in establishments that manufacture converted paper or pulp products, or in any other type of manufacturing or non-manufacturing establishment.

Exemptions

Exemptions for apprentices and student-learners in Hazardous Occupations Order No. 5 apply also under this order.

ORDER NO. 13

OCCUPATIONS INVOLVED IN THE MANUFACTURE OF BRICK, TILE AND KINDRED PRODUCTS

The following occupations involved in the manufacture of clay construction products and of silica refractory products:

(1) All work in or about establishments in which clay construction products are manufactured, except
   (a) work in storage and shipping;
   (b) work in offices, laboratories, and storerooms; and
   (c) work in the drying departments of plants manufacturing sewer pipe.
(2) All work in or about establishments in which silica brick or other silica refractories are manufactured, except work in offices.
(3) Nothing in this section shall be construed as permitting employment of minors in any occupation prohibited by any other hazardous occupations order issued by the Secretary of Labor.

Definitions

The term "clay construction products" shall mean the following clay products: Brick, hollow structural tile, sewer pipe and kindred products, refractories, and other clay products such as architectural terra cotta, glazed structural tile, roofing tile, stove lining, chimney pipes and tops, wall coping, and drain tile. The term shall not include the following non-structural-bearing clay products: ceramic floor and wall tile, mosaic tile, glazed and enameled tile, faience, and similar tile, nor shall the term include nonclay construction products such as sand-lime brick, glass brick, or nonclay refractories.

The term "silica brick or other silica refractories" shall mean refractory products produced from raw materials containing free silica as their main constituent.

ORDER NO. 14

OCCUPATIONS INVOLVED IN THE OPERATION OF POWER-DRIVEN CIRCULAR SAWS, BAND SAWS, AND GUILLOTINE SHEARS

The occupations of operator of or helper on the following power-driven fixed or portable machines except machines equipped with full automatic feed and ejection:

(1) Circular saws.
(2) Band saws.
(3) Guillotine shears.

The occupations of setting up, adjusting, repairing, oiling, or cleaning circular saws, band saws, and guillotine shears.

Definitions

The term "operator" shall mean a person who operates a machine covered by this Order by performing such functions as starting or stopping the machine, placing materials into or removing them from the machine, or any other functions directly involved in operation of the machine.

The term "helper" shall mean a person who assists in the operation of a machine covered by this order by helping place materials into or remove them from the machine.

The term "machines equipped with full automatic feed and ejection" shall mean machines covered by this order which are equipped with devices for full automatic feeding and ejection and with a fixed barrier guard to prevent completely the operator or helper from placing any part of his body in the point-of-operation area.

The term "circular saw" shall mean a machine equipped with a thin steel disc having a continuous series of notches or teeth on the periphery, mounted on shafting, and used for sawing materials.

The term "band saw" shall mean a machine equipped with and endless steel band having a continuous series of notches or teeth, running over wheels or pulleys, and used for sawing materials.

The term "guillotine shear" shall mean a machine equipped with a movable blade operated vertically and used to shear materials. The term shall not include other types of shearing machines, using a different form of shearing action, such as alligator shears or circular shears.

Exemptions

Exemptions for apprentices and student-learners in Hazardous Occupations Order No. 5 apply also under this Order.

ORDER NO. 15

OCCUPATIONS INVOLVED IN WRECKING, DEMOLITION, AND SHIPBREAKING OPERATIONS

All occupations in wrecking, demolition, and shipbreaking operations.

Definitions

The term "wrecking, demolition, and shipbreaking operations" shall mean all work, including cleanup and salvage work, performed at the site of the total or partial razing, demolishing, or dismantling of a building, bridge, steeple, tower, chimney, other structure, ship or other vessel.

ORDER NO. 16

OCCUPATIONS IN ROOFING OPERATIONS

All occupations in roofing operations.

Definitions

The term "roofing operations" shall mean all work performed in connection with the application of weatherproofing materials and substances (such as tar or pitch, asphalt prepared paper, tile, slate, metal, translucent materials, and shingles of asbestos, asphalt or wood) to roofs of buildings or other structures. The term shall also include all work performed in connection with :

(1) The installation of roofs, including related matal work such as flashing and

(2) alterations, additions, maintenance, and repair, including painting and coating, of existing roofs. The term shall not include gutter and downspout work; the construction of the sheathing or base of roofs; or the installation of television antennas, air conditioners, exhaust and ventilating equipment, or similar appliances attached to roofs.

Exemptions

Exemptions for apprentices and student-learners contained in Hazardous Occupations Order No. 5 apply also under this Order.

ORDER NO. 17

OCCUPATIONS IN EXCAVATION OPERATIONS

The following occupations in excavation operations are particularly hazardous for the employment of persons between 16 and 18 years of age:

(1) Excavating, working in, or backfilling (refilling) trenches, except
   (a) manually excavating or manually backfilling trenches that do not exceed four feet in depth at any point, or
   (b) working in trenches that do not exceed four feet in depth at any point.

(2) Excavating for buildings or other structures or working in such excavations, except
   (a) manually excavating to a depth not exceeding four feet below any ground surface adjoining the excavation, or
   (b) working in an excavation not exceeding such depth, or
   (c) working in an excavation where the side walls are shored or sloped to the angle of repose.

(3) Working within tunnels prior to the completion of all driving and shoring operations.

(4) Working within shafts prior to the completion of all sinking and shoring operations.

Exemptions

The exemptions for apprentices and student-learners discussed in Hazardous Occupations Order No. 5 apply also under this Order.

Ryley, Frederick, Comp.
Report on the Manpower Development and Training Program, Mattoon, Illinois.

Illinois State Board of Vocational Education and Rehabilitation, Springfield
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 17Mar66 17p.

*VOCATIONAL FOLLOWUP; *GRADUATES; *ADULT VOCATIONAL EDUCATION; *FEDERAL PROGRAMS; INCOME; PARTICIPANT SATISFACTION; EMPLOYMENT EXPERIENCE
MATTOON MANPOWER TRAINING CENTER; ILLINOIS; MDTA PROGRAMS; *MANPOWER DEVELOPMENT AND TRAINING ACT PROGRAMS

A questionnaire was mailed to 214 graduates of the arc welding and turret lathe operator programs conducted at the Mattoon Manpower Training Center. Usable returns were received from 145 graduates. Response of 138 graduates to an educational background question indicated that 68.1 percent had completed the 12th grade while only 9.4 percent had completed the 8th grade or less. The majority of the graduates were extremely satisfied with the training they had received and 87.5 percent were employed full time with 39.8 percent employed in occupations for which they were trained, 21.1 percent in related occupations, and 39.1 percent in unrelated occupations. The trainee's average yearly salary before training was $2,620.00 and after training $4,979.00. The average annual income tax paid before training was $44.00 and after training $398.00, indicating that in 2 years and 10 months, additional federal income tax paid by manpower program graduates will repay the total cost of training. R&S 3-17-66

Introduction

This survey was conducted by the use of a written instrument which was developed and mailed to the 214 graduates of the Mattoon Manpower Program. The survey form was developed as a result of a visit with the personnel involved in the administration of the Mattoon Manpower Training Center, a visit to the Illinois State Employment Service, Mattoon, as well as a solicitation of ideas and criticisms from other individuals familiar with the Manpower Program.

At the date of compilation of the report, 145 usuable returns had been received or 67.8% of the total population. Whenever possible any questionable answers particularly on the graduate's employment and salary record were verified by telephone.

I INTRODUCTION TO MANPOWER STUDY

The 1961 Area Redevelopment Act (ARA) was a forerunner to the Manpower Development and Training Act of 1962. The ARA authorized assistance to areas with substantial and persistent unemployment in two ways: (1) the planning and financing of economic redevelopment, (2) training the area unemployed and underemployed workers. The MDTA is much broader and farsighted in nature. The law is directed toward the unemployed, unskilled and others whose skills need to be updated to meet changing requirements resulting from automation, technological changes, relocation of industry, shifts in market demands and other economic factors. Programs aimed at retraining the hard-core unemployed are emphasized.

Responsibility for training is placed with the Federal Department of Health, Education and Welfare, which in turn contracts with each State Vocational Education Department to organize and conduct the training needed. The responsibility for determination of training needs and locating persons available for such training is placed with the Department of Labor through their local Employment Service Offices.

Under MDTA, one hundred percent of the training costs are presently financed through Federal funds. Illinois has been a leader in the establishment of MDTA classes. In Illinois, more occupational training classes have already been established, or are in the planning stages, than in any other state. As of November 30, 1965, a total of 354 differenent programs for 31,375 trainees had been approved throughout the state since the conception of the MDTA program.[1]

This past Fall, the Illinois State Board of Vocational Education and Rehabilitation expressed a desire to obtain some first hand information on our state Manpower Program. The State Vocational Education Office of Research and Statistics undertook the responsibility of conducting a survey of graduates from Manpower Training Programs to obtain some "grass roots" data for the State Board and other interested parties.

The graduates of the Manpower Training Program conducted by the Mattoon Community Unit School District Number Two was chosen for the survey. Some of the deciding factors in this choice were, first and probably most important, the relatively rural composition of the Mattoon area. It was thought this climate would facilitate the job of tracing down or locating more graduates than larger urban areas. Second, was the interest and progressive attitude prevalent in the Mattoon Manpower Program Administrators, both in the local school district and in their local state employment office. These administrators and program instructors, because of their interest, have maintained contact with many trainees long after graduation. Mattoon has conducted training classes under MDTA almost from the beginning of the Illinois program. These classes have graduated trainees over a longer span of time than many of the other training centers, therefore giving a more varied universe to attempt to secure data from.

1. Source: Illinois Labor Bulletin Fourth Quarter 1965, Vol. 20 No. 4, p. 5

The survey was conducted by the use of a written instrument which was developed and mailed on September 23, 1965 to the 214 graduates of the Mattoon Manpower Program. By October 15th a total of 73 or 34.1 per cent of the graduates had completed the survey forms and the information secured from this group was tabulated. Another group of 72 or 33.6 percent of the total had returned the survey form by January 10, 1966. The securing of such a large second group of returns was aided by the use of a second follow-up letter and survey form mailed to all non-respondents on October 27, 1965.

The original tabulation of data in two groups was used as a means for determining the amount or variance in answers from Group 1 as compared to Group 2. We were interested in the possibility that the returns received after the first surge would gradually deteriorate in quality on factors such as employment, working in a field for which trained, etc. This was based upon the assumption that those graduates who were presently employed and those who were most successful, would be less reluctant to fill out a questionnaire on their background and present status. This assumption was shown to be invalid when Group 1 was compared to Group 2. No further attempt was made to secure a return from the class of non-respondents primarily because of the close correlation between the answers of Group 1 and Group 2.

II GENERAL SUMMARY OF MANPOWER STUDY

A. General Information on Number of Respondents in the Survey

Total number who have completed training as of 9/15/65: 214

Number of completed survey forms from program graduates:

Group I (survey forms completed and mailed back to research department by October 15, 1965) 73 or 34.0% of total

Group II (survey forms received by research department from October 15, 1965 to January 10, 1966) 72 or 33.6% of total

Total Group (comprised of group I plus group II) 145 or 67.8% of all graduates

B. General Background Data on Manpower Graduates

	Group I	Group II	Total (Groups I & II)
Per Cent of respondents who were married at the time of the survey:	73.6%	70.8%	72.2%
Average number of dependents (not including trainee):	2.0	2.0	2.0
Per Cent of trainees who were unemployed heads of a household when they enrolled in the training program:	53.5%	54.4%	54.0%
Per Cent of trainees who were unemployed for 5 or more weeks prior to training:	54.9%	70.1%	63.2%
Median age of the trainees when enrolled:	23	23	23
Mean age of the trainees when enrolled:	25.0	25.7	25.3
Average number of 'solid' job offers received upon completion of the Manpower Program:	2.2	2.2	2.2
Average number of hours worked per week by employed at time of study:	43.4	44.3	43.9

C. Education

	Group I	Group II	Total (Groups I & II)
Total number who completed question asking for the highest grade of education completed:	71	67	138
Percent of total who completed the following grades:			
8th grade or less	9.9	9.0	9.4
9th grade	4.2	7.5	5.8
10th grade	5.6	16.4	10.9
11th grade	7.0	4.5	5.8
12th grade	73.2	62.7	68.1
	100 %	100 %	100 %

Education Attainment of the MDTA Trainees

D. Employment of Graduates at the Time of Survey

	Group I	Group II	Total (Groups I & II)
Total number of respondents who answered question on their present employment status:	73	71	144
Employment status by percent:			
Employed full time	91.8	83.1	87.5
Employed part time	1.4	2.8	2.1
In Military Service	4.1	9.9	6.9
Unemployed	2.7	4.2	3.5
	100 %	100 %	100 %

Employment Status of the MDTA Graduates

Graduate's Rating of Manpower Training

	Group I	Group II	Total (Groups I & II)
Total number of respondents who answered question on rating their attitude about the MDTA training they received:	71	66	137
Graduate's rating of program by percent:			
Extremely satisfied	66.2	72.7	69.3
Somewhat satisfied	23.9	9.1	16.8
Neutral	4.2	4.5	4.4
Somewhat dissatisfied	5.7	13.6	9.5
Extremely dissatisfied	0.0	0.0	0.0
	100 %	100 %	100 %

Rating of Manpower Training by Graduates

F. Relationship of Present Job to Manpower Training

	Group I	Group II	Total (Groups I & II)
Total number of respondents who answered question:	67	61	128
Graduates classification of present job by percent:			
Employed in occupation for which trained	44.8	34.4	39.8
Employed in related occupation	14.9	27.9	21.1
Employed in unrelated occupation	40.3	37.7	39.1
	100 %	100 %	100 %

Employment Status of MDTA Graduates

G. Rating of Preparation for Present Job by those Trainees Presently Employed in a Manpower Trained or Related Job

	Group I	Group II	Total (Groups I & II)
Total number of respondents who answered question:	40	38	78
Graduates rating of preparation for their present job by percent:			
Very well	50.0	57.9	53.8
Moderately well	50.0	36.8	43.6
Not very well	0.0	5.3	2.6
Not well at all	0.0	0.0	0.0
	100 %	100 %	100 %

Graduates Rating of Preparation for their Present Job*

* Rating is by these MDTA graduates who at the time of the survey were employed in a manpower trained or related job.

H. Cost of the Mattoon MDTA Projects (Based on the 3 completed Arc Welding Projects and the 1 completed Turret Lathe Project - total of 127 graduates)

Transportation allowance	$ 4,809	or	$ 38	per trainee
Training allowance	53,565	or	422	per trainee
Instruction & equipment cost	67,581	or	532	per trainee
Total cost	$125,955	or	$922	per trainee

Cost per training hour - Arc Welders (12 weeks @ 30 hours per week = 360 hours)	$2.36
Cost per training hour - Turret Lathe Operators (18 weeks @ 30 hours per week = 540 hours)	$2.27
Average training cost per hour	$2.31

Cost of the Mattoon MDTA Projects Per Trainee*

* Based on 3 completed Arc Welding Projects and 1 completed Turret Lathe Project - Total of 127 graduates.

I. Unemployment, Income and Federal Tax Data on MDTA Graduates*

	Group I	Group II	Total (Groups I & II
Average number of weeks unemployed per year:			
In the year prior to the manpower course**	15.8	15.8	15.8
In the year after the manpower course	4.3	2.8	3.4
** Questionnaire completed by MDTA graduates was not designed to get a valid answer to this question. The 15.8 weeks was derived from a special census of 62 MDTA trainees who were currently enrolled in a Mattoon program in the fall of 1965.			
Trainee's average yearly salary before manpower training (based on an average of 36.2 weeks worked per year)	$2479.00	$2745.00	$2620.00
Average income tax paid (1965 tax rate assuming 2 dependents)	26.00	61.00	44.00
Trainee's average yearly salary after manpower training (based on 47.7, 49.2 and 48.6 weeks worked per year for Group I, Group II, and Total, respectively)	$5022.00	$4915.00	$4979.00
Average income tax paid (1965 tax rate assuming 2 dependents)	$ 405.00	$ 390.00	$ 398.00
Time it would take each trainee to repay through his additional income tax, his total cost of training	2 yrs.,6 mos.	3 yrs.,0 mos.	2 yrs.,10 mos.

* All income data is based on respondents who graduated from either an arc welding or a turret lathe project and who furnished useable income information.
Note: Useable income data was received from 64 or 50.3% of the 127 arc welding and turret lathe graduates.

MATTCON MANPOWER PROGRAM *

Projects	No. Started	No. Now Attending	No. Dropped	No. Completed
Arc Welding	143	13	9	121
Automobile Mechanic	33	14	9	10
Electronics Mechanic	36	33	3	0
Machine Operator, General	30	12	3	15
Turret Lathe Operator	93	11	14	68
Totals	335	83	38	214
Per Cent	100.0	24.8	11.3	63.9

* This is a 'to date' (as of 9/15/65) summary of the Mattoon program since its inception in 1963.

Location of Employment for Manpower Graduates *

No. of Graduates	
175	Employed in 28 different cities in Illinois
8	Employed in 4 other states
6	In military service
7	Unemployed
2	College
16	Unknown
214	

Cities Which Employ Five or More Mattoon Graduates

No. Employed	City
6	Charleston
6	Danville
11	Decatur
56	Mattoon
11	Paris
33	Peoria
5	Rockford
7	Shelbyville
8	Springfield
6	Sullivan
149	

* Source - Mattoon State Employment Service

Income of MDTA Trainees

Federal Income Tax Paid by MDTA Trainees

Cost of MDTA Training

In 2 yrs. 10 mos. additional federal income tax paid by MDTA graduates will repay total cost of training

Cass County Study of Vocational-Technical Education. A Report to the Citizens.

Lewis-Cass Intermediate School District, Cassopolis, Mich.
Michigan State Dept. of Public Instruction, Lansing. Div. of Vocational Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jul66 119p.

*VOCATIONAL EDUCATION; HIGH SCHOOL STUDENTS; HIGH SCHOOL GRADUATES; OCCUPATIONAL SURVEYS; *EDUCATIONAL NEEDS; TECHNICAL EDUCATION; SURVEYS; POPULATION TRENDS; EMPLOYMENT TRENDS; *PROGRAM ATTITUDES; EDUCATIONAL INTEREST; GRADUATE SURVEYS; EMPLOYER ATTITUDES
CASS COUNTY; MICHIGAN

A study was conducted by a citizen's advisory committee to show the specific needs for training the youth of Cass County for occupational competency. The 1960 population of Cass County was 36,932, and the 1966 school organization included 12 primary school districts and 4 high school districts. County, state, and national statistical data were studied to show characteristics and projections for the population, education, labor, industry, commerce, and agriculture. Surveys were conducted, and questionnaires were received from 434 high school seniors, 144 business and industrial firms, and 223 high school graduates. Curricular offerings in agriculture, business, home economics, and industrial arts were studied in the county's six high school buildings. Recommendations included: (1) the 4 high school districts should cooperatively employ a director of vocational education, (2) introductory programs should be provided in all high schools for the development of basic skills, attitudes, and habits needed for entrance into the world of work, (3) advanced courses in specific vocational areas should be offered in cooperative exchange programs on a county-wide basis, and (4) each high school should be encouraged to develop and/or expand a cooperative occupational program as approved by the Vocational Division of the Michigan Department of Education. DIRECTOR: Samuel A. Scarnato

School Board Members, Educators and
Other Interested Citizens of Cass County

This report of the findings and recommendations of the Cass County Study for Vocational-Technical Education is presented for your thoughtful consideration.

The purpose of this report is to provide you with a sound basis for future direction and action in developing a meaningful program of vocational-technical education that will meet the needs of today's youth and adults.

It represents the efforts and cooperation of many. Any errors of omission or commission are the responsibility of the writer.

Letter of Transmittal
Re: Vocational-Technical
Education Proposal

Dear Mr. Winger:

This is to inform you that in 1965 a study was initiated under the sponsorship of the Lewis Cass Intermediate Board of Education to make a comprehensive survey of the vocational and technical conditions and needs in Cass County, with the specific objective of making a determination as to the needs and possibilities for vocational and technical education in Cass County.

In order to implement the study, the sponsoring organization employed a director and organized a citizen's advisory committee composed of a wide cross section of representative lay and professional people of Cass County, including representatives of most of the constituent school districts. This committee was also assisted by Mr. Robert Pangman of the Department of Education.

After an extensive study, extending over a period of ten months, the Advisory Committee compiled a comprehensive printed report and recommendations.

With this letter, I am submitting to you five copies of said Study Report, which definitely establishes the need for vocational and technical education to best serve the educational needs of high school and post high school youths and adults in Cass County.

Upon the basis of this letter and copies of the Study Report, and according to a wide cross section of responsible citizens in Cass County, which definitely establish the need for vocational and technical education in said county, I trust that you and other members of the Department of Education, will grant approval for the various programs of vocational and technical education in the constituent high schools and Southwestern Michigan College.

Sincerely yours,

John O. Ames

CHAPTER I

INTRODUCTION

Dynamics For Change

If today one were asked to characterize, in one word, education in the United States, that word would likely be "change." Never has education been of such national concern, with tremendous pressures at all levels to improve the product of our educational processes. Yet while we read on the one hand of the various federal acts which provide assistance for education, there appears to be a continuing problem with our youth leaving our high school prior to graduation. Perhaps of even greater concern, large numbers of our high school graduates enter the labor market with little or no employable skill for today's industrial technology. By some estimates as much as 75 per cent of our secondary school student population will not go on to college; an alarming portion of these non-college bound youngsters will follow a general curriculum in high school which fits them for no specific employment without further formal training.

Paradoxically, industry at this time has large numbers of unfilled jobs at low and upper middle levels, and automation, while eliminating some jobs, is also creating jobs at low and upper middle levels. It does not seem too much to ask education to prepare more of our youth for gainful application of their

high school studies. It becomes clearly evident that a new conception and a greater imagination and inventiveness must take place in high schools and community colleges in providing guidance, occupational information, and some form of occupational education for the overwhelming three-fourths of the students.

Since the early days of this century, vocational educators and others have joined with the Congress and with business, agricultural, and industrial people to search out suitable means of providing broad programs of vocational education for those destined to go directly from high school to work. Much legislation has been enacted by both the national and the state governments, but the meagerness of funds and supplies has always limited the broad occupational training opportunities for youth and adults.

With the passage of the Vocational Education Act of 1963, schools are presented a challenge and a mandate on scale and magnitude which demands immediate attention and creative approaches. The act makes appropriations available for meeting the needs of:

1. High skill and technical ability.
2. Youth and unemployment.
3. The high school dropout.
4. The disadvantaged individual.
5. The displaced worker.

It represents a new kind of thinking and provides an unprecedented flexibility. It opens up a whole array of new targets for what could become vocational education. Programs no longer need to be restricted to the traditional, specific

and highly specified services of vocational education. However, guide-lines which denote vocational education as a highly specialized kind of education will still be carefully considered, but programs may involve more than one of the traditional major vocational services, so that crossing of service lines could become characteristic of programs in the future.

On the local level the Study for Vocational-Technical Education in the Lewis Cass Intermediate School District is a beginning step in the direction of re-tooling the educational enterprise for occupational competency. This report will attempt to show the specific needs for training the youth of Cass County for tomorrow.

Early Industrial Development

Cass County, Michigan, was first settled in the 1820's and the first industries were little more than one-man shops for the manufacture of articles too complicated for the settlers of the area to fashion for themselves. These early necessary industries included the typical blacksmith shops and mills for grinding grain of nearly a century and half ago.

The ready power which the Dowagiac Creek supplied for industry was one of the reasons for the development of Dowagiac as the industrial center of the county.

The many small and individual-type industries, which are described in an early Cass County history, passed from the scene "as soon as railroad transportation became general and the centralization of manufacturing began it would be necessary either that the tannery should enlarge to more than a local

concern or go out of business entirely. The latter was more often the case."[1]

The industries of Cass County developed within this framework of growing transportation facilities and increasing specialization. A summary of a factory inspection made in Cass County in April, 1905, as reported in the Twenty-third Annual Report of the Michigan Bureau of Labor indicated the following:

> Cass County had 37 industries which reported employing 994 people or 5 per cent of the county population. (Undoubtly this figure would have been twice as large had all data from the period been available). The City of Dowagiac with a population of slightly less than 5,000, had 16 factories or workshops which produced or handled 11 different kinds of goods. Eighty-seven per cent of the county's industrial employees worked in Dowagiac. The Round Oak Stove Works with 590 employees and the Dowagiac Manufacturing Company with 165 employees were the county's leading industries.

The growth of financial institutions is closely related to the growth of industry in Cass County. In 1855 the first bank in the county was founded by Asa and Charles Kingsbury in Cassopolis. In 1905 this bank reported capital assets of $50,000 and surplus and profits of $50,000. This bank is still in existence today with estimated assets increased a hundredfold since 1905.

The first banker in Dowagiac was H. B. Denman who founded his bank in 1856. In 1865 his bank became the First National Bank of Dowagiac. This bank was later to be sold, experience a merger, a charter expiration and renewal, and numerous other changes. In 1906 this bank reported deposits and surplus

---

[1] L.H. Glover, A Twentieth Century History of Cass County (Chicago: The Lewis Publishing Co., 1906), p. 187.

27

totaling $350,000.

The principal industrial firm of the county during the earlier part of this century was the Round Oak Stove Works. Founded in 1854 by P. S. Beckwith for the manufacture of plows, the company in 1870 patented the Round Oak Stove, a product which went on to enjoy great popularity. In 1905 it was estimated that "half the population of Dowagiac depended on the Round Oak Works for livelihood and that 65 per cent of the employees owned their own homes."[1] In 1942 this company drastically curtailed its operation in light of war-time demand with the Kaiser Motor Corporation taking over and finally being forced to close because of severe competition.

Cass County's Industrial Giants of Today

Although many of Cass County's largest industries at the turn of the century are no longer in existence there are many companies whose histories extend almost to that time. It is instructive to examine the histories of the few of Cass County's larger present-day companies because they reveal the forces which have shaped the county in recent years.

The Rudy Manufacturing Company was founded in 1915 by Mr. Arthur E. Rudolphi, who had worked at the Round Oak Furnace Company. At that time the company was known as the Rudy Furnace Company. The company has always been located at its present site on East Praire Ronde Street, Dowagiac, near the railroad lines, but it has undergone much expansion. Today it manufactures

---

[1] *Ibid.*, p. 191.

component parts for air-conditioning apparatus, evaporators, and condensers in a plant with 500,000 square feet of floor space and it employs approximately 1,200 persons. Its annual payroll is about $8,000,000 and it is the largest company in the county.

The Jessup Door Company was started after World War II when Mr. Robert R. Jessup returned to his hometown of Dowagiac and began making mouldings and cabinets. In 1954, the company began making louvred doors. The production of louvred doors has grown from 500 to 600 per day to 5,000 to 7,000 per day which also includes the production of paneled doors and blinds. In 1960, Mr. Jessup sold the company to A. J. Industries which owns diversified companies throughout the United States. Today the company occupies a factory with 200,000 square feet of floor space and employs about 300 persons in Dowagiac. Company officials indicate that the company undoubtedly will continue to grow.

Greater Dowagiac Association

One of the most interesting and stimulating developments in the modern history of industry in Cass County was the formation of a citizens' group in 1954 called the Greater Dowagiac Association (GDA). This group was suggested by the local Lions Club when the Kaiser Motor Corporation suspended production in Dowagiac. The group, under the early leadership of Mr. Fred Horner, former mayor of Dowagiac, and Mr. Eugene Jenison, worked out a program to attract new industry to Dowagiac. The GDA formed a number of non-profit organizations, each of which built a building

and then leased or sold it to a new company. The GDA has since become the Greater Dowagiac Chamber of Commerce.

The Cupples Door and Frame Corporation began operations in Dowagiac in 1954 because of the presence of a building which had been built by one of the GDA sponsored organizations. In 1960 the company was sold to the Cupples Products Corporation of St. Louis, Missouri. It is now a wholly owned subsidiary of Alcoa. The company has grown from 12,000 square feet of floor space to 116,000 square feet and now employs over 100 persons in producing commercial doors, frames, and store fronts.

CHAPTER II

POPULATION OF CASS COUNTY

Selected Characteristics and Changes

The rapid rate of change, previously mentioned, is often most visible in material things; however, populations also undergo radical changes in their distributions and characteristics. This section will attempt to provide data taken from the 1960 United States Census of Population of Michigan which describe the population in a number of important ways.

Tables 1, 2, and 3 present the following data: the population of the municipalities of the county and the balance of the county, the county and the state for the years 1940, 1950, and 1960; the number and percentage of increase for 1940-50 and 1950-60; and the components of population change between April 1, 1950 to April 1, 1960.

TABLE 1

POPULATION, CASS COUNTY 1940, 1950, and 1960

Villages, County & State	1940	1950	1960
Dowagiac	5,007	6,542	7,208
Cassopolis	1,488	1,527	2,027
Marcellus	992	1,014	1,073
Edwardsburg	482	616	902
Vandalia	360	360	357
Balance of County	13,581	18,126	25,365
CASS COUNTY	21,910	28,185	36,932
MICHIGAN	5,256,106	6,371,766	7,823,194

TABLE 2

INCREASE IN NUMBER AND PERCENTAGE OF POPULATION, CASS COUNTY 1940-50 AND 1950-60

Villages, County & State	Increase 1940-50		Increase 1950-60	
	Number	Per Cent	Number	Per Cent
Dowagiac	1,435	28.7%	666	10.2%
Cassopolis	39	2.6	500	32.7
Marcellus	22	2.2	59	5.8
Edwardsburg	134	29.9	286	46.4
Vandalia	0	0.0	- 3	loss
Balance of County	4,545	28.0	7,239	37.3
CASS COUNTY	6,275	28.6	8,747	31.0
MICHIGAN	1,115,660	21.2	1,451,428	22.8

TABLE 3

COMPONENTS OF POPULATION CHANGE CASS COUNTY, APRIL 1, 1950 TO APRIL 1, 1960

Components	City of Dowagiac	Balance of County	Cass County	Michigan
Births*	1,877	4,471	6,348	1,917,903
Deaths	905	2,724	3,629	628,707
Natural Increase	972	1,747	2,719	1,289,196
Per cent of Natural Increase	145.9%	21.6%	31.1%	88.8%
Net Migration	-306	6,334	6,028	162,232
Per cent of Migration	-45.9%	78.4%	68.9%	11.2%

*figure corrected for underregistration

Source: John F. Thaden, Population of Michigan Counties, Projections to 1970, Institute for Community Development, (Michigan State University, March, 1962) and A. Beegle, et.al., Michigan Population 1960 Special Bulletin 438, (Michigan State University, 1962).

The following conclusions may be drawn from the foregoing population data.

1. The percentages are indicative of a better than average population growth for the county. Caution needs to be noted in making future projections on the percentage-increases of the past two decades. Projections based solely on percentage-increase without consideration to size, composition, and many other factors of the population could over simplify the future growth picture.

2. While the population growth in Michigan has been due to natural increase, seemingly the reverse was true in Cass County. Approximately 89 per cent of the state's growth was to the excess of births over death in the last decade, while less than one-third of the county growth can be attributed to similar reasons.

3. The population of the state of Michigan accounted for 4.4 per cent of the total United States population and Cass County accounted for only .47 per cent of the total Michigan population. The later percentage showed no change from the previous decade.

4. The growth pattern of the city of Dowagiac is atypical in comparison to the balance of the county.

5. The most rapid rate of growth is in the southern portions of the county as noted in the increased growth rate of the village of Edwardsburg.

Rural and Urban Residence

Among the most dramatic changes in our population and particularly in Michigan is its growing centralization. This trend is shown only in part by the increases occurring in the urban residence category. Expansions in the areas near certain cities, but outside incorporated urban areas, are shown as "rural" growth in census reports but should be considered as a part of the process of centralization. Here again Cass County presents a residence pattern different from the state, as evidenced from the data shown in Table 4.

TABLE 4

COMPARISON OF MICHIGAN AND CASS COUNTY POPULATION DISTRIBUTION BY RURAL AND URBAN RESIDENCE, 1960

Population Distribution	Michigan		Cass County	
	Number	Per Cent	Number	Per Cent
Urban Population	5,739,132	73.4%	7,208	19.5%
Rural Population	2,084,062	26.6	29,724	80.5
Rural Population in Places 1000-2500	240,753	3.1	3,100	8.4
Rural Population Outside Places of 1000-2500	1,843,309	23.5	26,624	72.1
Urban Population Increase, 1950-60	1,236,048	27.4		10.2
Rural Population Increase, 1950-60	215,380	11.5		37.3

According to residence, 73.4 per cent of Michigan's population in 1960 was classified as urban, while 80.5 per cent of Cass County's population was classified as rural. The rural population increase was more than three times greater than the urban population in the decade of 1950-1960 in Cass County. During the same period the state experienced an increase rate in the urban population that was more than double the rural population.

TABLE 5

CASS COUNTY POPULATION BY AGE GROUP: APRIL 1, 1960

Age Group	Number	Per Cent	Per Cent for Michigan
Under 5	4,257	11.5	12.3
5-14	8,164	22.1	20.7
15-24	4,601	12.4	12.9
25-39	6,774	18.3	20.0
40-54	6,205	16.8	17.4
55-64	3,030	8.2	8.2
65-74	2,463	6.6	5.5
75 & Over	1,438	3.8	2.5

Population Projection For Cass County

Population growth or decline is a result of a combination of the balance in births and deaths and of selective migration. Differences in rates of change between county units in a state (as has been cited) are evidently due to the effects of migration rather than to effects of natural increase. It must be pointed out at this point that an abrupt change in Michigan's migration pattern began about 1956. Demographers are indicating that the 1950's marked the end of a distinct phase in the state's population growth a period during which Michigan was able to attract large numbers of migrants because of the current growth of industries.[1]

The University of Michigan's Population Studies Center recently completed a study showing a three and one-half per cent increase in 1964 from the state's census count of 1960. The same study indicated a total of 38,100 population in 1964 for Cass County. The most often quoted projections for the state are the ones

[1] See: "A Demographic Analysis of Michigan 1960-80" by David Goldberg in William Haber, et.al. Michigan in the 1970's. (Ann Arbor, Michigan: The University of Michigan)

prepared by the Bureau of the Census in 1957, which estimate the 1970 state population at 9.4 to 10.4 million.[1] Today such figures seem to be out of date in light of the most recent data.

Using and adjusting the projections from studies of the state and national trends in light of the foregoing analysis of Cass County's population characteristics, it appears that there will be changes in the rate of increase through the decade of the 1970's for Cass County. Utilizing data compiled by the Population Studies Center, University of Michigan, projections by age groups for Cass County are shown in Table 6. Population projections cannot be forecast with precision and it can be expected that Table 6 will produce a level of average error to be no more than three per cent in 1965, ten to twelve per cent in 1970, but considerably greater in 1980.

TABLE 6

CASS COUNTY POPULATION PROJECTION BY YEARS AND AGE GROUPS

Age Group	Years				
	1960	1965	1970	1975	1980
0-4	4,257	3,534	4,607	4,904	5,202
5-9	4,192	4,370	3,533	4,648	4,956
10-14	3,972	4,213	4,320	3,525	4,640
15-19	2,809	3,787	3,973	4,118	3,384
20-24	1,792	2,444	3,296	3,529	3,693
25-29	1,943	1,969	2,602	3,537	3,783
30-34	2,346	2,028	1,980	2,647	3,594
35-39	2,485	2,347	1,966	1,949	2,607
40-44	2,217	2,472	2,293	1,941	1,930
45-49	2,124	2,116	2,352	2,200	1,871
50-54	1,864	1,999	1,974	2,210	2,074
55-59	1,655	1,782	1,885	1,871	2,097
60-64	1,375	1,547	1,648	1,748	1,737
65 & Over	3,901	3,929	4,029	4,196	4,417
Total	36,932	38,537	40,458	43,023	45,985

[1]See: U.S. Bureau of the Census: "Illustrative Projections of the Population by States, 1960, 1965 & 1970," Current Population Reports, Series P-25, No. 160.

It is important to note that the projections given in Table 6 do reflect different rates of growth among age groups. Briefly, the following conclusions may be drawn from the data.

1. The number of pre-school children (up to age 4) is not expected to change dramatically in the early 1970's. This is substantiated by the number of natural births as reported by the Vital Statistics Division of the State Health Department.

2. The population segments reaching their teens and twenties will exhibit the largest change. This increase is not speculative, since the people have been born already.

3. The number of pre-school children should rise substantially in later years of 1970's and particularly during the 1980's. The latter increase will result from the rise in the number of births to new parents. This can be noted from the fact that the increased age groups are people reaching their child-bearing years.

4. The latter two points have implications affecting the labor market opportunities in the immediate future and a dramatic need for educational facilities in the long range future.

5. The growth projections will vary in the individual high school districts and is much more difficult to predict. A later section will deal with the secondary school projections for the near future.

CHAPTER III

CASS COUNTY LABOR, INDUSTRY AND COMMERCE

Cass County Labor Force

According to the 1960 census, Cass County had a working force of 12,871 persons. Of this number 71 percent were men, while three out of every ten workers in the county were women. On basis of population increase (described in an earlier section) and with due consideration for the prosperity of the times, it is estimated that the mid 1960's working forces number between 13,400 to 13,500. As shown in Table 7, four of every ten employed persons are engaged in manufacturing. In only two other types of industries are one-tenth or more persons employed, the wholesale and retail trade employing 16 percent and 10.2 percent are engaged in agriculture. Present trends indicate that the percent of Cass County persons in agricultural employment will continue to decline, while the service categories will rise. White collar occupations, the professional, managerial (except farm), clerical and sales occupations comprise 29.3 percent of the total work force.

The 1960 census revealed that 42.3 percent of the county's residents worked outside of Cass County. The industrial complex of South Bend-Mishawaka-Elkhart, Indiana, south of the county, attract a large portion of the work force. Other noteable areas of employment for local residents are the Niles-Buchanan area, the Twin-Cities of Benton Harbor-St. Joseph, and the Three Rivers area. It is estimated that the percentage of residents working outside Cass County is slightly higher at the present time with

the actual number being estimated at 6,000 or more.

A break-down of the types of employment within Cass County as recent as March, 1964, are shown in Table 8. It should be noted that Table 8 represents two-thirds of the actual total; missing are 21 percent of the wage and salary workers and 13 percent of the self-employed in Cass County. The wage and salary workers include agricultural workers, domestic services, governmental employees (large group within this category, 14 percent), and others.

TABLE 8

NUMBER AND PERCENT OF PERSONS EMPLOYED IN CASS COUNTY BY MAJOR INDUSTRY GROUPS*

Industry	Number of Industries	Employees	
		Number	Percent

Source: U.S. Department of Commerce, Bureau of the Census, Michigan, County Business Patterns, 1964

In the final analysis it can be seen that the largest share of Cass County residents seek their livelihood in the manufacturing industry and retail trade. These two employment classifications within Cass County include the following:

MANUFACTURING
- Lumber and Wood Products
  - Millwork and Related Products
- Furniture and Fixtures
  - Household Furniture
  - Wood Furniture (not upholstered)
- Fabricated Metal Products
  - (Metal Doors, Sash and Trim)
- Machinery, except Electrical
  - Metalworking Machinery
    - Special Dies and Tools
  - Service Industry Machines
    - (Commercial Refrigeration)
- Transportation Equipment
  - (Trailer Coaches, Mobile Homes)
- Miscellaneous Manufacturing
  - (Toys and Sporting Goods)

RETAIL TRADE
- Building Materials
- Farm Equipment
- Food Stores
- Automotive Dealers
- Service Stations
- Eating and Drinking Trade
- Miscellaneous Retail, from Apparel to Accessories

Manufacturing

When comparisons are made between the manufacturing establishments in Michigan and Cass County for the years 1954 and 1958, as shown in Table 9, the following facts are evidenced:

1. The number of manufacturing establishments increased considerably faster in Cass County than in the state.

2. The increase in the number of manufacturing establishments was virtually concentrated among establishments with 100 or less employees. The number of establishments employing more than 100 did not change between 1949 and 1958.

3. While the state of Michigan experienced a recession or a drop in the number of workers, wages, etc., the county experienced a favorable climate for manufacturing.

4. The total number of persons employed by manufacturing did not increase between 1949 and 1954 (see Table 10) and since 1954 to the present there has been an approximate increase of 100 employees per year.

TABLE 9

Retail and Wholesale Trade

When one compares retail and wholesale trade statistics in Michigan and Cass County for the years 1954 and 1958, the following facts are gathered from Tables 11 and 12.

1. A comparison of the figures shows that Cass County and the city of Dowagiac have had a much greater rate of growth in the volume of retail and wholesale trade than the entire state.

2. Over 40 percent of the retail business in the county is transacted in the city of Dowagiac and three-fourths of the wholesale business is carried on in Dowagiac.

3. The figures for retail trade indicate that Dowagiac has enjoyed a higher rate of growth than Cass County in general. Such a concentration of the county's economic resources are indicative of the larger population and industrial centers of the county being found in Dowagiac.

CHAPTER IV

AGRICULTURE AND CASS COUNTY

Introduction

Agriculture is a dynamic industry which has branched out in scope and every phase but one, the number of people on farms. Farm population, once four out of five people in the United States, is becoming a smaller proportion of the total population. This change was brought about by the mechanical revolution, great strides in improved crops and livestock, agricultural chemicals, and disease control resulting from science and research applied to agriculture. The farmer now produces food for himself and 28 others.[1] This releases these "others" to produce the items and conditions making-up our high standards of living.

Comparing the four out of five who once lived on farms to the seven and one-half percent who now live on farms may mislead one to think that there has been a serious decline in farm population. The actual decline in farm population has been slight, as shown in the following graph.

[1]See: Changes in Farm Production and Efficiency, United States Department of Agriculture, Statistical Bulletin 233, September, 1963.

The graph shows that in 1870, sixteen million farm people made up 40 percent of our nation's population. It is estimated that in 1963, fourteen million farm people constituted only seven and one-half percent of the nation's population.

Facts About Agriculture in Michigan

Besides being an industrial state, Michigan also conducts a big agricultural business -- nearly two billion dollars big. The following facts are taken from the Michigan Department of Agriculture publication, Michigan Agricultural Statistics (July, 1963) and from the Michigan Department of Education Publication No. 506, A Look at Agriculture in Michigan (Revised, 1964).

1. Michigan ranks seventeenth in our nations total cash farm income.

2. Michigan ranks among the top 10 states in the production of 28 major crops.

3. Michigan ranks first in the production of field beans, sour cherries, late celery, carrots, market tomatoes and cataloupes.

4. Michigan ranks 7th among the states in total milk production.

5. The total output of agriculture in the United States is 47 percent greater than 20 years ago. In the lake states (Minnesota, Wisconsin, Michigan) the increase has been 49 percent.

6. Agriculture is big business:

   (1) The sale of products from Michigan farms totaled $744,838,000 in 1962.
   (2) The volume of business directly connected with the processing, storing, distribution and transportation of farm products amounted to about $1,200,000,000 in 1961.
   (3) Sale of farm products and the resulting business totaled 1.9+ billions of dollars.

7. Twenty-seven percent of Michigan's labor force is employed in agri-business.
   (1) Seven percent of the total labor force in Michigan is employed on farms.
   (2) Twenty percent of the total labor force in Michigan is employed in one way or another in agricultural occupations other than farming.

8. Over 817,000 people in Michigan are agriculturally employed.
   (1) Approximately 217,000 people work on farms in Michigan.
   (2) About 600,000 people work in non-farm agricultural occupations in Michigan.

Agriculture in Cass County

In 1940, approximately 40 percent of Cass County's labor force was engaged in agriculture, 10 years later this percentage was reduced in half to 20.6, and the past decade has once again cut the percentage in half to 10.2 in 1960. In twenty years the number of farms has been reduced over 1/3 -- 2466 in 1944 to approximately 1500 in 1964.

Such changes are shown statistically in Tables 13 and 14. In the decade of the 1950's substantial reductions are noted in the number of agricultural workers, number of farms and population residing on rural farms (see Table 13). However an equally substantial gain is shown in the value of farm products sold; a productivity amounting to $6,181,000 in 1949 was increased by 30.6 percent in a decade.

Table 14 also shows similar changes in the county's agricultural picture. The tremendous productive efficiency of farmers is clearly illustrated. While the number of farmers and farms has been steadily declining during the five year period between 1959 to 1954, Table 14, shows an increase in the number of large farms, 250 acres or more.

Because Cass County today is still largely rural and agriculturally oriented, most of the changes shown below can be expected to continue at their present rates. The number of farms and farmers will decrease, farm efficiency and productivity, and farm related businesses will increase. The challenge of local agricultural programs includes the ability to prepare young men and women for such occupations as may be found in businesses supplying farm needs, rural banking, communication, agricultural research, and agricultural service organizations as well as farming.

CHAPTER V

FACTS ABOUT THE LEWIS CASS INTERMEDIATE SCHOOL DISTRICT

Geographic Area Served

The Lewis Cass Intermediate School District is for the most part located within Cass County, although its boundaries do not coincide with those of the county. The district is a separate governmental body operated by the Lewis Cass Intermediate School District Board of Education.

Cass County, located in southwestern Michigan, second county east of Lake Michigan, bordered on the south by Indiana, lies 75 miles across the lower end of Lake Michigan from Chicago, and 15 miles from the Lake Michigan ports of Benton Harbor and St. Joseph. Beyond its southern border lies Indiana's industrial and city-centers of South Bend, Mishawaka, and Elkhart.

In size Cass County is 24 miles east and west by 21 1/2 miles north and south and is comprised of 15 townships, one city: Dowagiac, and four incorporated villages: Cassopolis, Edwardsburg, Marcellus, and Vandalia.

Historical Background

The first school west of Detroit and Monroe was taught in Pokagon Township in 1828 by Mrs. Gamaliel Townsend, and the first tax-supported school was established in April, 1840, at what is now Dowagiac.[1]

---

[1]Cass County Historical Society

In 1956-57, ten years ago, there were 7,842 pupils being educated in the county's 57 school districts and five years later, in 1961-62, the number of pupils grew to 9161 and the number of school districts was reduced to 27. The 1965-66 School Directory indicated a total school membership of 9261 and 18 school districts. The changes that have taken place in school district reorganization in Cass County have been numerous over the past decade; however, the problem is far from any final solution at this writing. During the passionate-winter meetings on School District Reorganization, two non-high school districts (one the fourth largest-pupil district, Howard Township) voted to annex to neighboring Niles School District.

Cass County School Reorganization

There remains at this date four high school districts and 12 primary school districts, one of which is a Closed School District, see map. The remaining 11 primary schools have membership enrollments totaling 281 pupils or 3.3 percent of all pupils in the present Lewis Cass Intermediate School District and only two of the schools, Cullinane and Daly in Silver Creek Township, have more than twenty-eight students. Eight are one-teacher rural schools and only one of fifteen teachers in all the primary schools possesses a Bachelor's degree. These 11 primary schools have 88 different sections of kindergarten to the eighth grade, which means that the fifteen primary teachers must provide instructions to meet an average of six varying grade levels daily, not to mention the varying degrees of differences within individual pupils.

Cass County Border in Dark Broken Lines
White Areas In Districts Outside County

Primary School Districts Numbered as Follows:

1. Cullinane (Silver Creek Twp.)
2. Daly (Silver Creek Twp.)
3. North Wayne (Wayne Twp.)
4. Cushing (Silver Creek Twp.)
5. Hinchman (Silver Creek Twp.)
6. Indian Lake (Silver Creek Twp.)
7. Mayflower (Pokagon Twp.)
8. Peavine (Pokagon Twp.)
9. Champlain (Pokagon Twp.)
10. Geneva (Penn Twp.)
11. Penn No. 7 (Penn Twp.)
12. Shavehead: Closed School (Porter Twp.)

Despite what glowing commentaries local advocates claim for the little red school house, the fact remains that the case is extremely well documented both in lay and professional pronouncements concerning the rural primary school being able to provide little more than the basic 3 R's and certainly unable to adequately meet the educational demands of the present local community, the state, and the nation.

On the basis of personal contacts and findings of personal research,[1] the writer is aware of the element of strong feeling in Cass County that considers school district organization as dominion of the local power structure and as a sacred entity that should not be changed. Quite to the contrary, local school districts are a creation of the state and legally operate as a subdivision of the state. The national picture clearly shows that when it has not been able to do the job for which it was created, school districts have been modified. It is an intergral part of the on-going, developing, ever-changing process of American life.

The local school district is the most common and best-known form of local government. It is close to the people and it has exemplified again and again America's finest experience with democratic government. Taking the necessary steps to have it dissolved or absorbed into a larger administrative unit is never easy. Pleasant memories of childhood experiences in the country school and deep satisfactions gained from transacting the district business affairs at the local board meetings are translated into resistance to reorganization. Such resistance

---

[1]Samuel A. Scarnato, Study of School District Reorganization for Education in Southwestern Michigan. Unpublished Doctoral Dissertation.

is often expressed in form of fear that local control will be destroyed; that the school house will be done away with and the children transported too far away from home; that vested interests, personal and financial, will come to an end; that school taxes will increase; that parental influence on children will be weakened seriously; that schools will become so big that children will be treated as an automated digit; or that the rural community itself will be seriously weakened or destroyed.

Whether the above fears are well grounded or purely imaginary makes little difference when the opportunity comes to finally count the yeas and nays in Cass County. The crux of the matter is that if sound school district reorganization is to be effected through the expression of the free will of the people, then Cass County's electorate themselves must be so firmly convinced of its advantages to provide the educational services needed for today and tomorrow that they will be willing to give it priority over their personal interest, concerns, prejudices, and fears.

Secondary School Populations

School populations projections are important factors in the planning of programs of school curriculum as well as school buildings. Projections cannot be made with precision and are always more likely to be accurate for short periods than for long ones. The grade survival method of predicting future school populations was used in this study. This method assumes the proportion of seriously handicapped children, death rates, migration, drop-out or retention rates, and school promotion policies will change at the average annual rate which has been

true for the previous ten years. The method takes into account the combined effect of these variables. Projections have also been made to correlate with assumptions of economic and social conditions and future population growth previously cited.

Several factors considered in the projections presented unique difficulties. One was parochial school enrollments and possible future changes in their growth. Discussions with religious educational leaders of the area and Rev. William Meyers, Superintendent of the Lansing Diocese Catholic Schools, indicated that very little change might be expected in their pupil enrollments and scope of program interest within the next year. Changes may well occur in future parochial school policy that would create slight impact on the Dowagiac Public Schools. However, no official changes have been mentioned at this time.

Another factor considered was the high school services received by the students of the county's primary schools. The nine primary schools surrounding the northwestern borders of the Dowagiac Union Schools for the most part send their high school students to Eau Claire High School in Berrien County, a marginal high school by present day standards. It has an approximate enrollment of 350 students in the upper 4 grades (over 20 percent from Cass County and provides 58 different course offerings in grades 9-12; compared to 89 course offerings in grades 10-12 provided by Dowagiac High School).

Another handful of high school students from this area attend Niles and Brandywine High School in Berrien County and Lawrence High School in Van Buren County. A study of the social and economic activity of these primary districts by the

writer revealed a positive identity with the city of Dowagiac.[1] In this study separate projections were made for the Dowagiac Schools and the total Dowagiac Service Area. A similar approach was taken with regard to the two remaining operating primary schools of Geneva and Penn No. 7 of Penn Township. The latter two primary schools are virtually surrounded by the Cassopolis School District and their socio-economic ties are more closely identified with the village of Cassopolis. Presently Geneva and Penn No. 7 send their high school students to Penn-Harris-Madison High School in Mishawaka, Indiana.

Conclusions

The projections in Tables 15 and 16 reveal a steady increase in the total number of secondary school pupils in Cass County. In grades 7, 8, 9, with the exception of a one year loss, the increase will be at the rate of approximately two classrooms over the next seven years. In the upper three grades the increase will vary from one to two classrooms per year for the next decade.

The next seven years will show an 11 percent increase in the total secondary enrollment. The upper three grades will show a 16.7 percent increase in a decade, with the largest increase being experienced by Edwardsburg High School. A number of other individual factors may be derived from the tables.

1. The yearly increases in the Cassopolis and Marcellus

School Districts will be steady and manageable for the next decade. Only a social or economic phenomenon in these districts would cause a different growth rate for the next decade, and after five years of optimistic observation, the writer has found no visible evidence for a change of pattern for the next decade.

2. The 1975-76 projection of 488 students in the upper three grades for Edwardsburg High School might well be termed "conservative." The in-migration pattern of that school district might easily find that grade size of 200 pupils five years earlier than forecast.

3. The population center, industrial center, and a majority of the commerce activity in the county are found in the city of Dowagiac; all factors which can contribute a booming school enrollment. While an increase may be expected in the next decade, they are relatively stable. Only a reorganization with the surrounding primary school districts would produce a 20 percent increase. Such a reorganization which obviously would have many ramifications for school buildings, staff, etc., could at the same time produce a wider pupil enrollment that makes the expansion and improvement of programs more feasible and efficient both economically and educationally.

Finally, two observations are presented. First, the projected secondary pupil enrollment, grades 7-12, for the next ten years would need to be <u>three times as large</u> to warrant the recommendation that a separate area vocational center (i.e., separate from one of the four existing high schools or the community college) be established to serve the Lewis Cass Intermediate School District. Second, through first hand visitations, the writer recognizes that one or all of the following conditions existing in each of the four high school districts' physical facilities:

1. Out-dated, obsolete facilities that need to be replaced.

2. Temporary or make-shift arrangements of facilities that need to be replaced or refurbished.

3. Usable facilities in need of rejuvenation and modernization.

4. Newer facilities that require expansion.

The period of time that elapses from the recognization of one of the above needs until it is corrected is measured in years. Therefore if these deficiencies are not provided for within the decade of the early 70's, when projected increases are manageable, it will be discovered that the late 70's will present growth increases and program changes that will burden the local schools beyond their capacities.

CHAPTER VI

EMPLOYMENT AND EDUCATION

Introduction

The need for a greater emphasis on the preparation of people for today's world of work is a national concern. Much is said and written about the importance of general education, which provides for the development of the individual and the preservation of our culture and way of life, as not being enough for the great majority of people who must operate machines, shops, and offices. On the national scene more and more occupations require skills and specialized knowledge for which there must be prior training. In the last 60 years, dramatic shifts have occurred; these have become more pronounced and accelerated in the last 2 decades, 1940-60. As shown in Table 17, the proportion of white-collar workers in the labor force rose from 31.1 percent in 1940 to 42 percent in 1960, more than a one-third increase. During the same period, the proportion of professional and technical workers increased 44 percent, and managers and officials gained 40 percent. Clerical workers increased over 50 percent, while sales workers declined slightly.

Manual workers have been declining in relative importance, from 39.8 percent in 1940 to 37.5 percent in 1960. The largest decline occurred in the unskilled laborers with a drop of over 36 percent.

Service workers, as a whole, increased during this period from 11.7 percent to 12.6 percent. Within this group, however, domestic workers have been declining, which leaves the other service workers with a gain of 30 percent.

TABLE 17

DISTRIBUTION OF MAJOR OCCUPATION GROUPS, BY PERCENTAGES 1900-1960

Major Occupation Group	1900	1910	1920	1930	1940	1950	1960
White-collar workers	17.6	21.3	24.9	29.4	31.1	36.6	42.0
Professional, technical, and kindred workers	4.3	4.7	5.4	6.8	7.5	8.6	10.8
Managers, officials, and proprietors, excluding farm owners	5.8	6.6	6.6	7.4	7.3	8.7	10.2
Clerical and kindred workers	3.0	5.3	8.0	8.9	9.6	12.3	14.5
Sales workers	4.5	4.7	4.9	6.3	6.7	7.0	6.5
Manual workers	35.8	38.2	40.2	39.6	39.8	41.1	37.5
Craftsmen, foremen, and kindred workers	10.5	11.6	13.0	12.8	12.0	14.1	12.9
Operatives and kindred workers	12.8	14.6	15.6	15.8	18.4	20.4	18.6
Laborers, excluding farm and mine workers	12.5	12.0	11.6	11.0	9.4	6.6	6.0
Service workers	9.0	9.6	7.8	9.8	11.7	10.5	12.6
Private household workers	5.4	5.0	3.3	4.1	4.7	2.6	3.3
Other	3.6	4.6	4.5	5.7	7.1	7.9	9.3
Farm workers	37.6	30.9	27.0	21.2	17.4	11.8	7.9
Farmers and farm managers	19.9	16.5	15.3	12.4	10.4	7.4	4.0
Farm laborers and foremen	17.7	14.4	11.7	8.8	7.0	4.4	3.9

Note: Groups do not always add to 100 percent because of rounding.

Source: U.S. Department of Commerce, 1900-1950; U.S. Department of Labor, 1960.

The most dramatic decline has occurred in farm workers. This has been going on since the turn of the century. Between 1940 and 1960, the proportion of farm workers decreased 55 percent.

The pace of technological change has been accelerated through the impressive increase in expenditures for research and develop-

ment by the federal government, private industry, and others. In the period 1950-61, these expenditures increased from $2.9 billion to $14 billion, 380 percent.

In addition to adjusting to these technological innovations, the labor market is feeling the impact of large numbers of workers in search of employment. The supply of workers willing, able, and actively seeking to work is being affected by three major forces.

First, there are those workers whose jobs have been and are being affected by economic and technological change. Of particular importance was the movement of nearly two million workers out of agricultural and rural areas which took place in the decade 1950-60. Agricultural employment dropped 24 percent, from 7.5 million to 5.7 million, yet total output increased substantially. Another dramatic example of workers affected by technology occurred in bituminous coal mining. Here production workers declined from 351,000 in 1950 to 149,000 in 1960, a decrease of about 60 percent, while productivity, defined as average tons per man, more than doubled. In manufacturing, the number of production workers in 1960 was about the same as in 1950, approximately 12.5 million. During this same period the Federal Reserve Manufacturing Index, adjusted for seasonal variation, rose from 75.8 to 109.7 percent.

Technology, as reflected in increases in productivity, that is, output per man-hour, affects many workers each year. The Bureau of Labor Statistics has estimated that if annual productivity increases 2.5 percent the labor displacement will be 1.5 million workers. If there is a three percent increase, the

displacement will be nearly two million.[1] It must be noted, however, that displacement is not the equivalent of unemployment, nor can productivity rates be translated directly into unemployment figures. If the real product of the economy increases as much as productivity, the displaced workers (or an equivalent number of others) will be reabsorbed.

A displaced worker may not necessarily be involved in a labor market transaction; he may be transferred to another job with the same employer and may never experience any unemployment at all. Others may experience varying periods of unemployment before finding other jobs; still others may have become occupationally obsolete and experience extreme difficulties in finding suitable jobs. Here, we are concerned with those workers who are not absorbed by their employers and who are in search of a job.

Second, a major force affecting the supply of labor is the proportion of women working. Between 1950 and 1960, the number of women in the labor force increased from 19.8 million to 23.6 million, a gain of over 25 percent. Currently, about one-third of the labor force are women. Although we cannot go into the many factors responsible for this trend, it is important to note that women have developed a two-phase working cycle. Once out of school, they seek jobs. After marriage, they tend to leave their jobs to rear their children. Once the children no longer tie them to the home, many re-enter the labor market.

---

[1]Evan Clague, Social and Economic Aspects of Automation, report before the Joint Automatic Control Conference (Boulder, Colorado: University of Colorado, 1961.)

Between 1950 and 1960, the number of women in the labor force, ages 14 to 44, increased only 12 percent, while the number over 44 years of age increased 57 percent.

Third, the most impressive factor affecting the labor supply and of principal concern to this study is the large number of young people entering the labor force. The nation is beginning to feel the effects of the high birth rate after World War II. In 1950 there were 13.3 million workers 14-24 years of age in the labor market; in 1960 there were 13.9 million; and in 1961 there were 14.4 million. In one year (1960-61), over 500,000 young workers entered the labor force.

The labor market requires time to adjust to the impact of technology and the forces affecting labor supply. Over a long period of time, it does adjust; however, the long period may take a lifetime. Therefore educational programs designed to prepare people for employment must be concerned with the immediate need of employment as well as the long period needs.

Description of the Unemployed

Changing technology is having an effect on the kind of workers employers are seeking. United States Department of Labor data on the characteristics of the unemployed suggest that employers are seeking workers with higher levels of education, training, and skill. During 1962 about two-fifths of the unemployed were in the semi-skilled and unskilled occupational classifications. If those with no previous work experience were included, they would account for about half of all the unemployed.

TABLE 18

UNEMPLOYMENT RATES IN 1950 AND 1959 FOR MALES 18 YEARS OF AGE AND OLDER, BY YEARS OF EDUCATION COMPLETED

Years of Education	Percent of Civilian Labor Force		Change as Percent of 1950 Rate
	1950[a]	1959	
0-4	8.5%	9.9%	+16%
5-7	8.3	9.7	+17
8	6.7	7.3	+ 9
9-11	7.1	8.1	+14
12	4.7	4.9	+ 4
13-15	4.3	3.3	-23
16 plus	2.3	1.4	-39
Unemployed males 18 years of age and older	6.3	6.3	0

[a]All unemployment rates in 1950 are adjusted upward for: (1) census under-count labor force and unemployment compared with the Current Population Survey; and (2) persons with jobs but on temporary layoff or waiting to be called to new jobs, excluded from the unemployment classification in 1950 but included in 1959.

Source: U.S. Congress, Joint Economic Committee, Employment and Unemployment, Hearings, 87th Cong., 1st sess., subcommittee on Economic Statistics, December 18, 19, 20, 1961 (Washington: Government Printing Office, 1962), table by Clarence Long, p. 378.

Table 18 shows how the less educated workers are feeling the impact of employers' changing manpower requirements. The unemployment rates for males 18 years old and over are presented for 1950 and 1959, by years of education completed. These 2 years were selected because the unemployment rates for the group as a whole were identical, 6.3 percent. In 1950 the unemployment rate for those workers with 0 to 4 years of schooling was about 3.5 times that for those with 16 years or more. In 1959 the rate for the former was seven times that of the latter -- viewed another way, 16 percent between 1950 and 1959. The rate for those with 13-15 years of education declined 23 percent; and for those with

16 years or more of schooling, the rate declined 39 percent.

Those with less formal education are not able to compete realistically for the available jobs. Among this group are nonwhites whose unemployment rate during the last five years has been more than double that for whites. Although nonwhites compose less than 10 percent of the labor force, they have accounted for about one-fifth of all unemployment in each of the last five years. According to 1960 census figures, 10.4 percent of Cass County's 36,932 people were classified as nonwhite.

Also in the group whose educational preparation handicaps them in meeting employers' current hiring requirements are the school dropouts. It has been estimated that about one-third of the nation's young people drop out of school before completing high school. Unprepared for the world of work, the school dropouts experience difficulty in finding employment. In many instances, they have had little help in vocational guidance. Too many of them have no clear understanding of their abilities, talents, shortcomings, or how to go about getting jobs. In addition, some have not developed work habits.

According to United States Department of Labor data, 18 percent of the 214,000 school dropouts in 1960 were unemployed in October 1960. In October 1959, about one out of every four of the school dropouts in the labor force were unemployed.[1] If the current dropout rate continues, 7.5 million of the estimated 26 million youths entering the labor market during the 1960's

---

[1]Sophia Cooper, "Employment of June 1960 High School Graduates," Monthly Labor Review, LXXXIV, No. 5 (May, 1961) p. 465.

will be school dropouts. Of this number, 2.5 million will not have gone beyond elementary school.

TABLE 19

NUMBER UNEMPLOYED IN SELECTED AGE GROUPS AS PERCENT OF ALL UNEMPLOYED, AND ALL UNEMPLOYED AS PERCENT OF CIVILIAN LABOR FORCE IN THE UNITED STATES 1957-61

Age Group	1957	1958	1959	1960	1961
14-19 years of age (000)	574	757	727	792	921
Percent of all unemployed	19.6	16.2	19.1	20.1	19.2
45 years of age and over (000)	861	1,357	1,144	1,130	1,424
Percent of all unemployed	29.3	29.0	30.0	28.7	29.6
All Ages (000)	2,936	4,681	3,813	3,931	4,806
Percent of civilian labor force	4.3	6.8	5.5	5.6	6.7

Source: Employment and Earnings, Annual Supplement, Vol. 8, No. 12 (June 1962).

The employment problems of school dropouts are interrelated with those of young workers in general. The unemployment data reflect the difficulties of the nation's youth in finding jobs. Table 19 shows the rate of unemployment between 1957 and 1961 for the age group 14-19 years. With the exception of 1958, this group of workers accounted for about one-fifth of all unemployment in each of the years. In this five-year period, the unemployment rate among young workers has been between two and three times the rate for the nation as a whole.

Both inexperienced young workers and older workers (45 years old and over) have difficulty in finding jobs because of their inability to measure up to employers' hiring requirements. As indicated in Table 19, this older age group has accounted for about three-tenths of all unemployed in each of the five years.

While their age may be a handicap in their bid for employment, they may also be lacking in other qualifications, such as education. These can be termed the dropouts of a generation age.

Job Opportunities and Education in Cass County

Recognizing what the national picture clearly reveals, an attempt was made to focus on this problem on the local level. This section presents the findings of a study of 1096 job opportunities in Cass County and views expressed in personal interviews transpiring between 23 employers and the writer while conducting the survey of business and industry.

This particular study was done with the cooperation of the local office of the Michigan Employment Security Commission and the assistance of Mr. Martin Smith, Jr., manager of that office. It undertook to analyze all the announced job openings in the Cass County area from January 1, 1965 to November 1, 1965. The analysis attempted to determine what kind of work was available locally, whether formal education was required for the work and what beginning financial remuneration could be expected. Of the 1096 job announcements investigated, 193 called for part time or seasonal help and were eliminated from any analysis. The analysis of the remaining 80 percent or 903 job opportunities for permanent employment revealed the following educational requirement to gain job entry:

	Number	Percent
Less than high school diploma	707	78.3%
A high school diploma	177	19.6
More than a high school diploma	19	2.1

It can be seen that three of every four jobs workers sought in this study were not required to have a formal high

school education. It should also be noted at this point that the time period of this study happened to be during the crest of national prosperity.[1] The 78.3 percent appears to be a large portion and could possibly be somewhat smaller in the actual practice for job entry opportunities for the individual without a high school diploma. However the portion of jobs available in Cass County is still large enough to indicate that the non-high school graduate could find employment readily in 1965. While job opportunities exist in the local area for non-high school educated or high school dropouts, the latter in many cases is competing with the marginal high school graduate for the job entry. It would be in periods of economic stress, recession, labor abundance, etc., that the lack of a high school diploma would be a handicap. There is also the danger of the local labor market being filled with many individuals who possess a high school diploma but not saleable skills.

The second conclusion and relating to the last statement was what one personnel director aptly put as the "quality of a different brand" of education that prepares "the youth to work in my shop." Here the employer was not concerned with the attainment of a high school diploma or a community college degree, nor was criticism of the local school intended in his remarks. The emphasis of this and other statements was placed upon the previous training the applicant had which qualified him for entry

---

[1]In a number of interviews with employers and personnel directors in the County, the writer was repeatedly informed of the increased demand for "workers" during 1965. See also findings of Survey of Business and Industry, Chapter VIII.

into a job and all its implications. When parents speak of the quality of education they are generally talking about improving or upgrading the present curriculum either through new teaching methods, new approaches to subject matter, etc. But in this study employers were not talking about the quality of the 3 R's needed for advanced educational degrees but "quality of a different brand" which would prepare young people not only with a possible shop skill but also with some understanding or knowledge about the world of work "beyond the money earned and the training required for a job."

The permanent job openings available fell into the following categories:

1. Unskilled - strictly common labor work, generally known as the strong back and weak mind type of work.
2. Domestic - all types of household help from babysitters, yardmen, etc.
3. Semi-skilled - common machine operators, who were not required to read blueprints, truck-drivers, punch press operators, etc.
4. Foods & Related Services - waitresses, cooks, bartenders, etc.
5. Clerical - secretary - all office type work, from filing, typing, bookkeeping, etc.
6. Skilled - machine trade, tool-die makers, electricians, mechanics, etc.

An analysis of the permanent job openings available to individuals with less than a formal high school education (707 openings) indicated the following break-downs:

I. Type of work	Number	Percent
1. Unskilled	185	26.1%
2. Domestic	19	2.7
3. Semi-skilled	424	59.9
4. Foods & Related Services	33	4.7
5. Clerical-Secretary	13	1.9
6. Skilled	33	4.7

II. Beginning Pay	Number	Percent
Salaries	19	2.7
$2.03 per hour & up	23	3.3
$1.61 to $2.02 per hour	168	23.7
$1.26 to $1.60 per hour	344	48.7
Up to $1.25 per hour	153	21.6
III. Was Previous Experience Required		
Yes	387	54.7
No	320	45.3

The majority of the work available to non-high school graduates in this study was classified as semi-skilled and unskilled, which accounted for 86 percent of all the opportunities, while 94 percent of the jobs had a starting wage of $2.02 per hour or less. Nearly half or 48.7 percent of the jobs were in the wage price range of $1.26 to $1.60 per hour. Both the type of the work and the wage paid reflect a direct relationship to the level of formal education required for job entry in Cass County.

Over half the job opportunities available to non-high school graduates did require previous work experience. It is interesting to note the vast difference in percentages of the types of work available to the non-high school graduate with previous work experience and the one without:

	Previous Work Experience Required: Percentages	
	No	Yes
Semi-skilled	47.6	70.3
Unskilled	42.9	12.4
Domestic	4.5	1.3
Food & Related Services	3.0	5.9
Skilled	1.2	7.5
Clerical-Secretarial	0.8	2.6

In summary, employment opportunity for the non-high school graduate exists in the Cass County area, however, it is limited

in nature of the work available and in the pay scale. There is also the constant threat of this individual being second choice to the high school graduate in job entry. While individual differences exist, a very comparable picture exists in the educational level and employment opportunities on the national and county level.

The educational implications which might be derived from the foregoing are:

1. The importance of providing training for economic competence at an early age;

2. Emphasis upon attitudinal outcomes which will prepare individuals for our changing world of work;

3. Need for vocational guidance and counseling services; and

4. The desirability of establishing on the job training programs with business and industry for both youth and adults.

CHAPTER VII

WHAT OUR STUDENTS TELL US

Introduction

One important part of assessing the vocational interests and needs of youth of an area, is a study of the plans, aspirations, interests, and attitudes of youth. Previous studies have indicated that plans of high school seniors are predictors of post-school actions with a validity sufficient to warrant careful attention. Many of the same influences and forces which effect the formulation of plans, tend to be those which operate to influence their implementation and determine the extent to which a senior is likely to follow them. Assuming the characteristics of Cass County seniors in 1965-66 are similar to those who will be succeeding them during the several consecutive years ahead, perhaps even the next decade, certain conclusions based upon a study of them can serve as a basis upon which to offer some insight for the future.

During the fall of 1965, in cooperation with the principals, counselors, and various faculty members of the county's four high schools, a survey questionnaire was administered to all seniors of Cassopolis, Dowagiac, Edwardsburg, and Marcellus High Schools. Questionnaire responses were obtained from 434 seniors from a possible total of 491, representing 88 percent participation. Absenteeism and un-usable data accounted for the other 12 percent.

Mobility and Nature of Student Population

For further educational planning in Cass County, it is important to determine whether the prospective student body is composed of persons who have lived in the community for some lengths of time or whether it changes rapidly due to constant migration. Some idea may be obtained by examining the length of time the present seniors have resided in the area served by the respective high schools. These data appear in Table 20.

TABLE 20

LENGTH OF RESIDENCY IN PERCENTAGE IN AREA SERVED BY HIGH SCHOOL

Time of Residence	Percentages		
	Boys	Girls	Total
Less than a year	4.5	2.3	3.4
1-2 years	4.5	6.6	5.5
3-5 years	9.9	9.0	9.5
6-10 years	16.6	15.3	16.0
Over 10 years	64.4	66.5	65.4

Findings show that 91 percent of the seniors have lived in the area at least three years, and eight of every ten have been there at least six years, or since junior high school. More than six of every ten have lived in the area over ten years, while only one in every ten has lived there less than three years. While the data do not show out-migration of youth from the area, they indicate that of those currently in school, most of them have been there a considerable period of time. These findings evince a relatively high degree of population stability, which corroborates the findings in the previous chapter on population regarding the changing pattern of migration.

Less than 5 percent were found to be living with someone other than both parents while attending school. This fact shows that the incidence of family instability in terms of living with both parents is far less than in most communities.

Plans After Graduation

Students were asked, "What do you plan to do on a full-time basis the first year after high school graduation?" Two-thirds indicated they plan to seek further education or training and one-third indicated their intention to enter the world of work. Ninety-eight, or 22 percent, planned to continue their education by attending a business college, a trade or technical school. When asked, "Do you plan to attend college or university?", 38.7 percent indicated yes definitely and 25 percent indicated probably so.[1]

Occupational aspirations of youth give clues to types of education and training required if they are to achieve their occupational goals. All seniors were also asked to list their first preference for the kind of job which they would like to be doing ten years from now. An attempt was then made to determine the extent to which occupational goals of youth were compatible with their plans for further educational training. These data are contained in Table 21 which are categorized into types of fields and a comparison is made of the percentage of the youths' occupational goals and their plans for further educational training.

---

[1]In a similar type question two years ago on the Cass County Community College Survey with juniors (graduating class of June, 1965) the writer found 33 percent indicating definitely planning to go and 26 percent indicating probably will go.

TABLE 21

OCCUPATIONAL ASPIRATIONS AND FURTHER TRAINING AND EDUCATIONAL PLANS OF YOUTH

Type of Field	Aspiration In 10 Years		Plans for Training	
	Number	*Percent	Number	*Percent
Professional: Education	44	10.1	40	9.2
Professional: All Others	85	19.5	119	27.4
Semi-skill Trades (Boys: mechanics, TV & radio repair, drafting, etc. Girls: beautician, etc.)	91	19.9	91	20.9
Business including Accounting	40	9.4	48	11.
Secretarial	47	10.8	25	5.7
All Others (Agriculture, Commercial Art, Housewife, Civil Service, etc.)	95	21.8	37	8.5

*Percent based upon all 434 seniors in study but both items had 32 and 74 non-responses respectively.

The above table is a simple summarization but typical of the findings of a series of extentive analysis on the compatibility of data. Responses were coded for processing in such a way that a more refined analysis was possible. For example, the writer was able to conclude that 69 percent of those desiring to enter an office-clerical-secretarial type work were interested in further training in accounting, general business or secretarial-clerical types of training; of the seniors aspiring to work in drafting, 56 percent were interested in obtaining more advanced work in drafting.

In summary, Table 21 and most of the analysis done by the writer indicate a relatively high compatibility between the expressed occupational aspirational, his field of interest for continued study, and his expressed rank in the graduating class.

Studies of the aspirations of youth have been found to be less realistic the lesser the age of the student; and the aspiration level is always higher than is generally achieved. In this study the latter statement may be applicable but in comparison with similar studies in southeastern Michigan, higher levels of aspirations of youth were found.

The data on occupational aspiration and field of interest for further training seem to indicate needs for curriculum and programs at both the high school and community college levels in areas of the semi-skilled trades (drafting, mechanics, electronics, and business education).

How the School Could Better Prepare Students

One of the open ended items asked in the senior survey was: "How do you think the high school could prepare you better?" Recognizing that a questionnaire entitled Vocational Educational Study might elicite a bias response, it would still be considered educationally, if not statistically, significant to have 35 percent of all responses relate in one way or another to the school's programs of vocational or occupational education. Only two other types of responses elicited as much as 20 percent reaction and they related to the expansion of curricular offerings and suggestions relating to teachers and teaching method. Most predominate was the request for more course offerings such as in business, automotive mechanics, and improvement or addition of facilities and equipment in the field of occupational training.

CHAPTER VIII

SURVEY OF EDUCATIONAL NEEDS FOR LOCAL BUSINESS AND INDUSTRY

Introduction

One important aspect of determining the needs of vocational and technical education and training is to ascertain the needs of local industry and business for qualified employees. This chapter is devoted to the presentation of the results of a survey conducted among Cass County industrial and business firms and governmental units to determine the nature of jobs in our local economy and to explore the extent of any interest employers might have in job training or occupational educational programs at both the high school and post high school level.

Since the purpose of this study was to acquire information about job entry and employment practices in the local area, it was decided to survey all known employers, large and small, who employed two or more individuals other than their immediate family. The identification of employers and addresses was made possible through the assistance of Mr. Martin Smith, district manager of the M.E.S.C. office, and officials of the four high school districts. Questionnaires were both mailed and distributed in person by the writer and local school staff members. Members of the guidance staffs also assisted with telephone pleas in a follow-up on the non-response to the initial survey. The writer also conducted a series of informal interviews with employers or personnel directors on return or follow-up visits to pick up completed questionnaires.

A total of 267 industrial and business firms and governmental

units were included in the initial survey, during the month of December, 1965. The first returns of questionnaires gathered were 99. Final response was gathered from 161 firms (or 60.2 percent). Of the 161 questionnaires returned, 17 were eliminated from analysis for the following reasons. It was established that 6 firms had gone out of business; 2 firms indicated dual operations under two separate names but under a single proprietorship; 2 branch organizations (located in county) of parent companies with general offices elsewhere responded with form letters declining to participate because the divulging of such information violated company policy (several others undoubtedly fell in this category without indicating such); 3 firms indicated the nature of their business as seasonal, operating with new part-time employees each year; and 4 organizations returned un-completed questionnaires with personal letters explaining in detail the nature of their businesses and employment practices. The analysis presented is based upon the completed questionnaires of 144 firms in Cass County employing a total of 4,967 persons.

Description of Companies Surveyed

Even though many of the companies surveyed categorized themselves as performing more than one type of activity, it is instructive to arbitrarily classify the business and industrial firms in this survey in order to get an overview of the local picture. The survey returns were separated into three groups: companies employing 1-49 persons, companies employing 50-99 persons, and companies employing 100 or more persons and then classified into 15 descriptive categories, as shown in Table 22.

TABLE 22

CLASSIFICATION OF COMPANIES SURVEYED IN CASS COUNTY

Classification of Companies	Number of Companies	Number with 1-49 Employees	Number with 50-99 Employees	Number with 100 or More Employees	Number of Employees in this Category	Percent of Total Employees in Survey
Agriculture Services	6	6			33	0.7%
Banking, Finance & Insurance	10	10			84	1.7
Construction	5	5			32	0.6
Education, includes Library	7	4		3	498	10.0

Retailing and Wholesale, other than food, dairy, & drink	25	25			324	6.5
Service Establishments	11	11			53	1.1
Utilities	3	2		1	276	5.6
Total	144	125	6	13	4967	

Only brief comment is warranted on the content of Table 22. First, it is again emphasized that the results do not portray the full picture of Cass County's labor force. Second, the 15 categories listed in the table do not indicate a break-down of the division of labor for each occupational distribution, such as the number of white-collar workers, technical, skilled, clerical, etc. but only indicate a description of types of

businesses and industries surveyed. Some possible interpretations follow:

1. Nearly nine out of ten businesses or industries in the county are small in terms of people employed. In this study 86.8 percent of the companies employed 49 or less persons.

2. The largest number of persons are employed by manufacturing and industrial firms, i.e., six out of ten.

3. Again industrial manufacturing and retailing and wholesaling companies comprise the two largest numbers and represent 36.1 percent of the total number of companies.

Average Number Employed During The Past Year With High School Education

To investigate the characteristics of the local labor force for which high school level education and training (plus work experience) are considered sufficient and desirable, each company was asked to give the average number on the payroll during the past year at the Cass County location of the enterprise. Table 23 shows for each job type the number employed, the number of employers who expected the annual rate of employment for 1966-72 to either increase, or remain the same or decrease, and the number of employers who indicated that the local supply of qualified employees was scarce, adequate, or a surplus existed. The comparative infrequency of companies indicating a decrease in employment in the next five years can be attributed to such factors as the unprecedented economy of 1965 and employer optimism; similarly the infrequent indication of a surplus of qualified employees available in local labor market is due, in part, to the discriminate judgment and attraction for applicants by the employer.

As reported by employers and other officials, Table 23

shows that the largest number of employees (for which high school education is considered sufficient) can be classified as assembly-line or production line workers, comprising one-third of the workers in this part of the survey. The next largest number are classified as industrial machine operators. It should be noted that employers predominately anticipate their numbers to increase and have indicated both in the survey and in interviews that there is a scarcity in the local labor market. Other job categories containing an average of 100 or more employed are unskilled-workers (other than those indicated in the table such as general labor, etc.), salespersons-cashier (such as retail store clerk) and clerical-typist.

* 1 Company also indicated an expected decrease

** 1 Company also indicated a surplus in local supply of qualified employees

*** 2 Companies also indicated a surplus in local supply of qualified employees

Among the jobs in survey not shown in Table 23, which had less than 10 as an average number employed are: Bartender, Bricklayers, Draftsman, Dental Assistant, Electronics, Fireman, Insurance Adjusters, Library Assistants, Marine Service, Masonry, Office-Dispatcher, Painter, etc.

Employers are proportionately divided in their opinions as to whether the next five years will show an increase or remain the same in the total employment picture and in many of the types of jobs listed. Similar opinions are shown in Table 24 regarding employers' opinions on the scarcity and adequacy of the labor market. Nearly three out of every four employers indicated that the local labor market shows a scarcity of employees for industrial-type jobs. While two out of every three employers expressed the opinion that availability of office workers locally is adequate. The adequacy of persons available for business-office jobs can to a large share be attributed to the products of the high school business education programs.

TABLE 24

FIVE YEAR OUTLOOK AND AVAILABILITY OF JOBS SURVEYED REQUIRING HIGH SCHOOL EDUCATION.

Employment for People With Formal Education Beyond High School But Less Than College Degree:

Employers were also to give similar information concerning the kinds of semi-professional and technical jobs for which one or two years of post high school education are ordinarily

considered desirable or essential. The findings to this question are shown in Table 25. Although a section was provided to show if a decrease in number of jobs would be anticipated in the next five years, there was not a single entry made in that section, nor did any employer indicate that a surplus of qualified semi-professional or technical employees existed locally.

TABLE 25

EMPLOYMENT REQUIRING MORE THAN HIGH SCHOOL EDUCATION: AVERAGE NUMBER EMPLOYED, FUTURE OUTLOOK AND LOCAL SUPPLY.

Type of Job	Average Number Employed This Past Year	Number of Companies			
		Expect Annual Rate of Employment For 1966-72		Indicating Local Supply Of Qualified Employees is:

Nurse (Practical)	14	3		2	1

Among the jobs in survey not shown in Table 25 which had less than 10 as an average number employed are: Advertising, Purchasing Agent, Food Technician, Library Assistant, Law Enforcement, Court Reporter, Social Worker, etc.

In our survey, the jobs requiring more than high school education were noticeably smaller in number then those shown in Table 23. There are persons employed in a wide range of particular positions which Table 25 is unable to show because of the small number that would come under each job title. It can be shown that a relatively large percentage (54.2) are employed in industrial and technical positions. In these positions, foreman and supervisory personnel show the greater number and drafting and design technology and tool and die making have significant numbers. In the field of business; salesmanship, management, and secretarial are emphasized.

Again employers had divided opinions regarding the employment outlook for this type of worker in the next five years--whether employment would increase or remain the same. However, on the question of the availability of locally qualified employees, in eight out of every ten responses the answer was scarce. This was especially the situation in the case of shop foreman and industrial supervisory jobs. Where Table 23 shows more employers indicating an adequacy in secretarial personnel, Table 25 shows that employers are saying that secretarial personnel of a better-trained and higher quality are scarce in local labor market.

From these data, one can conclude that the greatest need for post-high school training would seem to be for programs designed for supervisory training. The same program was recommended by the Citizens Study for the Community College in their survey of the type of training that would be helpful to

local business.[1] Need for programs designed for various technology programs, draftsmen, and tool and die makers would seem to be warranted. Business needs would suggest that programs be developed in the areas of salesmanship, management, and secretarial studies.

Employer Opinions And Practices For Entry Employment

In the preceding chapter findings were reported on the job availability during the past year to non-high school graduates in Cass County. Conclusions reached in that analysis appear to be compatible with data received from employers to the questions of "With respect to the requirements of your firm for entry employment, in what job categories do you employ young persons who have 'dropped out' without finishing high school?" A second exact question concerned persons who have just graduated from high school? Three levels of response were suggested and a percentage table of comparison are presented in Table 26.

TABLE 26

PERCENT OF RELATIVE FREQUENCY WITH WHICH DROP-OUTS AND HIGH SCHOOL GRADUATES ARE EMPLOYED BY FIRMS FOR VARIOUS TYPE ENTRY JOBS.

	Common Practice		Infrequently		Almost Never	
Type of Job	Drop-out	H.S. Grad	Drop-out	H.S.Grad	Drop-out	H.S.Grad
Highly Skilled Jobs	0.0	21.0	8.2	15.8	91.8	63.2
Business Office Jobs	1.8	50.0	13.0	30.0	85.2	20.0
Sales Jobs	2.1	34.1	10.9	29.3	87.0	36.6

Unskilled Labor Jobs	44.2	79.6	35.1	16.7	20.7	3.7
Technician Jobs	-	17.7	-	23.5	-	58.8

[1]Citizen's Study for the Establishment of a Cass County Community College, July, 1964, page 57.

A brief study of these data show that employers will commonly employ the non-high school graduate for job entry in the jobs classified as unskilled and semi-skilled production work more so than any other category. The desirability of employing a high school graduate in preference to a drop-out are sharply indicated in the percentages. The expressed opinions of employers concerning job entry employment correlate highly with previous findings on all their employing practices.

It should be pointed out that it is not only the educational level which is involved; but also the maturity level and responsiveness of the individual to his work--many respondents wrote in such comments as "Do not accept responsibility", "Need continuing supervision", "Lack of interest", etc. However, maturation and education take place simultaneously while the student is enrolled in school and in a community college occupational education program, and the completion of a high school education and further training in the community college in many cases, would solve this problem of job preparedness. Further information on this question was sought in the next chapter of the survey.

Employer Evaluation Of Non-High School Graduates And Young Persons Just Out Of High School

Employers were asked to recall the employment practices of their firm over the past five years, and then check one of several statements which best described the official policy of the firm in evaluating non-high school graduates and high school graduates who applied for entry jobs with the firm. The data from those responses are tabulated in Table 27.

TABLE 27

EMPLOYER EVALUATION OF NON-HIGH SCHOOL/NEW HIGH SCHOOL GRADUATES APPLYING FOR ENTRY JOBS. (144 FIRMS SURVEYED)

EVALUATIVE STATEMENT	No. of Firms Checking Each	Percent of Total Firms
Non-High School Graduates		
We have employed a number of young non-high school graduates and we have found they can perform satisfactorily.	28	19.4
We have employed a number of young non-high school graduates but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.	21	14.6
We have found non-high school graduates unsatisfactory for the following reasons.	50	34.7
Firms not responding to this item.	45	31.2
New High School Graduates		
Most young high school graduates who apply seem reasonably well prepared for entry employment and we have employed them as openings have occurred.	41	28.5
We have employed a number of young high school graduates, but find they need a considerable amount of additional and/or training before they can perform satisfactorily.	30	20.8
We have found it inadvisable to employ young high school graduates except for unskilled jobs.	11	7.6
The nature of most of the entry jobs in our firms is such that young high school graduates are virtually unemployable because of lack of occupational education and training.	18	12.5
Firms not responding to this item	44	30.6

The higher number of non-response in Table 27 is due to the large number of firms with small numbers of employees who have had little or no experience with hiring of young people in the past five years. The statement receiving the largest response relates to dissatisfaction with non-high school graduates by the

employer. A careful review of the reasons enumerated by employers revealed the most frequent response (in nearly half the cases, 24 out of 50) to be related to a lack of formal education, such as unable to read, do simple arithmetic, etc. The next reason given was the one commonly associated with the drop-out student: lack of initiative and laziness. A lack in some mechanical ability or skill, undependable-not responsible, need for constant supervision, and unable to follow directions were other reasons given in order of frequency in 10 to 20 percent of all responses.

On the basis of the results of this query and within the limitation of the sample responding to Table 27, it might seem that Cass County employers do feel that the local high schools are meeting the need for occupational education today. However, there is also a definite expression of opinion from employers that young people "need additional education and training", both high school level and post high school for job entry.

Employers' Opinions Regarding Vocational Education In Cass County

Opinions were sought from employers on the extent to which existing educational facilities in the Cass County area meet the occupational and training needs of their companies. Seven percent of all firms thought existing facilities meet the needs very well, 39 percent considered them as fair, and 29 percent thought they were poor. None of the largest employers (50 or more employees) considered the existing facilities as meeting the needs very well, rather their opinions were evenly divided between a rating of fair and poor. This could be interpreted to mean that there is considerable room for improvement and/or a

need for additional facilities in the opinion of those responding.

Employers were asked, if they considered occupational education and training in the area needed improvement, which five suggested developments they would support. More than one response could be given and the number of companies responding to this question was 110. The findings are shown in Table 28.

TABLE 28

EMPLOYER OPINION ON SUGGESTED DEVELOPMENTS FOR VOCATIONAL EDUCATION IN CASS COUNTY. (NUMBER OF FIRMS RESPONDING - 110)

Developments Suggested	No. of Firms Checking Each	Percent of Total Responses
Substantial improvement of the present vocational education program in the existing high schools	37	19.7
Specialization in a particular area of vocational or occupational education by each high school with cooperative sharing of facilities, faculty, programs, etc. and the exchange of students among all high schools in the county.	22	11.7
Creation of an area vocational-technical facility center designed for secondary (high school) and post-high school occupational training on the Southwestern Michigan College campus.	70	37.2
Development of a program of tuitioning students on a part-time basis from our county high schools to neighboring vocational training centers which are in the planning stages, such as the South Bend Area Vocational High School.	10	5.3
Creating an office of Director of Vocational Education for Cass County to coordinate the programs of occupational training in our county schools and to serve as a liaison to business and industry.	30	16.0
Other (mostly related to specific curriculum and goals for vocational education, such cooperative training, drop-out work study program, specific subject content; 1-vocational high school, 1-Community College Director of Vocational Education serve county High Schools, etc.)	19	10.1

The development for an area vocational-technical facility center designed for high school and post high school occupational training on the Southwestern Michigan College campus received the most support from Cass County business and industry surveyed. The seventy firms who reacted favorably to this proposal constitutes nearly half of the total sample (144) and 64 percent of the firms responding to the question. A substantial number of employers also indicated a willingness to support the improvement of the present high school vocational programs and willingness to support structured leadership and cooperation for vocational education on a county-wide basis.

A willingness to cooperate further is evidenced as 68 firms or 47 percent responded yes when asked if they would be interested in participating in discussions or further study of plans for improving occupational educational and training at high school and post-high school levels in the Cass County area. Sixteen firms or 11 percent indicated no interest in further participation. (In more than twenty interviews with employers in the county, the writer found many extremely limited in time but not a one fell in the latter category.) Another 38 firms (26%) indicated they were undecided.

Employers were asked whether their firms conducted formally organized training programs, and if so, what type of program was being conducted. Twenty-five percent of all firms responding revealed some type of training program was provided. The type of programs most frequently provided can be described as apprenticeship, supervisory on-the-job training, and job upgrading. Seventy-four percent of all firms responding indicated no

organized training program for employees, this points to a void that could be filled by local schools.

A series of three questions were asked that elicited employers' opinions concerning post high school education at Southwestern Michigan College. First was: "If within the next five years you anticipate job opportunities in your firm which will require education beyond the high school, what type of program will best meet this requirement for your firm?"

Fifty-six percent of the firms surveyed responded as follows:

6	(7.5%)	All occupational courses
35	(43.8%)	Strongly occupational with some academic studies
20	(25.0%)	About the same amount of occupational and academic studies
12	(15.0%)	All academic studies
7	(8.7%)	All other responses

The second question, directed to industrial and manufacturing firms, was: "At what level do you believe Southwestern Michigan College should provide training for industry to meet your future job openings?"

A total of 41 firms responded as follows:

10	(24.4%)	The semi-skilled trades (simple machine operation)
12	(29.3%)	The skilled trades (learning how to operate and repair difficult machines)
6	(14.6%)	Semi-professional technology (advanced technology and design: just below the professional)
8	(19.5%)	All of the above skills
1	(2.4%)	Should not offer industrial training
4	(9.8%)	All other responses

A third question was: "If Southwestern Michigan College were limited to offering only one program in the area of vocational-technical education, which one, if any, of the following programs would your firm consider an absolute essential?" Respondents were asked to make only one selection and 78 percent

of the firms surveyed responded as follows:

20	(18%)	Industrial education leading to jobs in highly skilled trades
11	(10%)	Technical education leading to semi-professional jobs in support of science and engineering
8	(7%)	Cooperative training education: office
7	(6%)	Cooperative training education: distributive (Sales)
16	(14%)	Business Management and Accounting
16	(14%)	Secretarial Studies
5	(4%)	Drafting Technology
12	(11%)	Automotive Technology
5	(4%)	Agri-business
4	(3%)	Practical Nursing
9	(8%)	All other responses

CHAPTER IX

SURVEY OF HIGH SCHOOL GRADUATES

Introduction

In assessing the educational needs of vocational-technical education programs for Cass County it is desirable to make an appraisal of the present offerings through the opinions and views held by individuals who are a product of the local high schools. With the assistance of the guidance counselors of Cass County's four high schools, the names and addresses of 496 graduates were obtained. The sample was selected from the graduating years of 1955, 1960 and 1964. Because Dowagiac High School has had twice as many graduates as the next two larger schools, the larger number of the sample came from that school and selected graduates of the years 1954, 1959 and 1963 were also surveyed. The ability to find the present address of a past graduate was considered a prime criterion in the selection of the sample for this survey.

In March 1966, 496 questionnaires were mailed to these graduates with a cover letter from their respective high school principals along with a business reply envelope. In about four weeks following the initial mailing, a second questionnaire and letter were forwarded to a selected sample of 150 of those who had not responded to the first invitation for assistance and cooperation.

Response to the initial mailing brought 159 completed questionnaires while an additional 29 envelopes were returned for lack of sufficient address. The second mailing of the 150

selected sample brought 64 more completed questionnaires. A statistical analysis was made between the two sets of returned questionnaires on the assumption that the returns to the second request represented a non-responding population. The important question here was would a large number of non-response tend to bias the findings. This analysis revealed that the two groups of responses (159 and 64) were evenly distributed by sex, year and school. The statistical anaylsis of the first ten even numbered questions also revealed no significant difference between the two groups. Since there was no reason to suspect any bias relating to non-response, all data presented here is based upon the total completed questionnaires, 223 out of a possible 467, or a 47.8 percent return.

Description and Residence Status of Graduates

The greater number of the graduates responding to the graduate survey were graduates of Cassopolis High School, who were undoubtedly more familiar with the name of the writer and therefore responded more readily to the study. Also a higher percentage of response was received from those who had been graduated the longest. Data are shown in Table 29

TABLE 29

RESPONDENTS TO GRADUATE SURVEY BY YEAR OF GRADUATION AND HIGH SCHOOL

Year	Dowagiac	Cassopolis	Edwardsburg	Marcellus	Responding	Total Number Surveyed	Percent Responding
1954-55	9	24	12	6	51	92	55.4
1959-60	17	23	28	12	80	145	55.2
1963-64	17	41	29	5	92	230	40.0
Total	43	88	69	23	223	467	47.8

Of all graduates responding to the study, 60 percent live in Cass County, 11.6 percent lived outside but in a county immediately adjacent, 8 percent lived elsewhere in Michigan, and 21 percent lived outside of Michigan (one completed questionnaire was received from Australia). With about six of every ten graduates of this study being residents of the county, one might expect attitudes developed about the local high schools they attended and the educational program they received to be heavily reflected in the local adult population. Only 20.5 percent of the respondents left their home county within a year following graduation from high school. Of the respondents who moved out of the county 78 percent did so in less than three years. These findings correlate very highly with the mobility pattern found in a previous study of Cass County graduates done two years ago.[1]

The respondents were nearly divided equally as to men and women, 104 men and 119 women responded, or 46.6 percent and 53.4 percent respectively.

High School Curriculum and Type of Further Education

Graduates were asked to describe their high school course of study or curriculum. The findings are shown in Table 30. Nearly seven out of ten graduates were enrolled in the college preparatory or general curriculum, the traditional classroom oriented program of studies. The only vocational curricula

---

[1]See Citizens Study for the Establishment of a Cass County Community College (July, 1964), p. 37 (Mimeographed).

pursued by the graduates to a noticeable extent was the commercial or business education program. Again this may be partially attributed to the fact that this curricula is one of the few provided by the local high schools. While one third of the county's graduates go on to a college or university, over two-thirds graduate from academically oriented programs and while nearly three-fourths of all the county's high school students are destined to go from the high school classroom directly into the world of work or married life, only one-third are enrolled in curricula designed for such purposes.

TABLE 30

NUMBER AND PERCENT OF ENROLLMENT OF GRADUATES BY CURRICULUM

Curriculum	Number	Percent*
Commercial or Business Education	43	19.3
College Preparatory	74	33.8
Shop or Industrial Arts	14	6.3
Agriculture	12	5.4
Home Economics	10	4.5
General	76	34.1
Other	4	1.8

*Question permitted more than one reply, however, percentage based upon 223 graduates rather than total number of replies.

In regard to the type of further training or education graduates had received after leaving high school, it was found that almost two-thirds of the respondents (62.32 percent) had either received no additional training or had received on-the-job training where they were employed. Findings are shown in Table 31 along with a comparison of the percentages found in answer to the same question in Community College Study of 1963-64.[1]

[1] Ibid, p. 39

TABLE 31

NUMBER AND PERCENT OF GRADUATES BY TYPE OF FURTHER TRAINING RECEIVED

Type of Education or Training	Number	Percent*	Percent* of 1963-64 Study
No additional training	42	18.83	15.24
On-the-job training where I was employed	97	43.49	32.73
Business College	11	4.93	5.38
Trade or technical school	35	15.69	11.65
College or university	65	29.14	42.60
Adult education course at a local high school	12	5.38	2.69
Military service school	25	11.21	6.72

*Question permitted more than one reply, however, percentages are based upon 223 graduates rather than total number of replies.

It is significant that the findings of this graduate survey are relatively similar with the early community college survey of graduates. The difference in the percent found between the two studies of those who go on to a college or university can be attributed to the sample difference and the rise in percentage receiving further training through military service is a factor attributed to the increased participation of the nation in war. From both surveys it would appear that three to four graduates out of every ten go on to a college or university; two out of every ten seek further training in a business college or trade and technical school, another three to four out of every ten received further training on the job and nearly two out of every ten received no additional training.

It was found that 192, or 84 percent of the graduates responding were not going to any school at the present time.

Present Interest in Further Education

Graduates were asked, "Are you presently interested in further training or education?" Of those responding to the question, 137, or 65.86 percent replied, "Yes." They were also asked to indicate by writing in their answers what type of further training or education they would want. Types of training or education are shown in Table 32, showing the number of respondents indicating each. From the data shown, it would appear that a strong need exists for post high school educational opportunities relating to an undergraduate program of study and programs in business education.

TABLE 32

TYPES OF FURTHER TRAINING OR EDUCATION INTEREST TO GRADUATES

Type of Further Training	Number	Type of Further Training	Number
Liberal Arts	43	Technical

Nursing	8		
Agriculture Related	3		

Survey of Graduates' Opinions

An attempt was made to determine the opinions of graduates as to how effective school services had been in helping them to achieve certain educational goals. Each was asked to indicate whether the extent of the help given by the school was "much," "some," "little," or "none." This data is presented in Table 33

analyzed in percentages. For ease of interpretation, the largest percent of responses for each item is underscored.

TABLE 33

PERCENT OF GRADUATES BY EXTENT TO WHICH THEY THOUGHT THEIR HIGH SCHOOL HAD HELPED THEM

Educational Goal	Much	Some	Little	None	No Opinion
Taking part in community and civic affairs	17%	38%	17%	14%	14%
Preparing for a job	25	44	18	10	3
Getting a job	26	28	15	27	4
Getting along with other people	51	33	7	5	4
Preparing for further education	25	40	16	8	11
Usable or practical mathematics skills	24	43	18	9	6

In general, it can be seen that the largest percent of graduates considered the socialization goal of getting along with other people to be the one in which the school gave the most help and conversely it was on the matter of getting a job that the school was believed to be least helpful. In reponse to a similar item relating to the extent to which the high school prepared them for employment, if they had gone directly from graduation to full or part employment, 54 percent of the graduates indicated that the high school had done a poor or fair job in that respect.

Whether the foregoing are valid judgments on the part of the respondents is not the point to question. These data do show opinions expressed by a part of an adult population and that opinions and attitudes have been formed by 1 out of every 10 graduates that the high school has done nothing to prepare him for a job, further education, or participation in civic affairs; while 1 out of every 6 graduates considers himself "short

changed" in the same respect.

When asked if they felt that the local high school had a sufficient number of vocational courses available for the work-bound student, 60 percent of the graduates answered negatively. Only 26 percent answered yes, while 14 percent indicated they did not know. Would the graduates have taken more vocational type courses had they been offered to them, 48 percent said they would and 13 percent said they would not and 39 percent of the graduates indicated that they did not know whether they would.

The image of vocational education (i.e., the way vocational education, its activities and rationale, are perceived) is an intangible factor whose influence is considered a deterring element by educators. At best an accurate measurement of the image held by an adult population lies within variable limits. In this study of graduates, an attempt was made to measure the image, by asking if the graduates would encourage their children (if they were or are parents) to follow a program of study for the vocational-bound student, if interest and aptitude were present. Three out of four respondents (75.66 percent) indicated affirmatively and only 4.23 percent stated no; 20.11 responded undecided.

Opinions were also gathered from graduates concerning a number of developments they would support if they believe occupational education and training in the area needed improvement. Findings were as follows:

Developments Suggested:	Number	Percent of Total Response	Percent of Respondents
Substantial improvement of the present vocational education programs in the existing high schools.	85	23.5	38.1
Specialization in a particular area of vocational or occupational education by each high school with cooperative sharing of facilities, faculty, programs, etc. and the exchange of students among all high schools in the county.	52	14.4	23.2
Creation of an area vocational-technical facility center designed for secondary(high school) and post high school occupational training on the Southwestern Michigan College campus.	99	27.4	44.4
Development of a program of tuitioning students on a part-time basis from our county high schools to neighboring vocational training centers which are in the planning stages, such as the South Bend Vocational High School.	45	12.5	20.2
Creating a Department of Vocational Education for Cass County for purpose of developing and co-ordinating programs of vocational education within our county high school.	70	19.4	31.4
Gave other suggestions	10	2.8	4.5

It is worthy to note that over 60 percent of the above respondents are of voting age and represent a portion of a decision making population. Almost half of the respondents, 44 percent, indicated support to the creation of an area vocational technical facility for high school and post high school occupational training on the Southwestern Michigan College campus.

CHAPTER X

STATUS OF OCCUPATIONAL EDUCATION IN CASS COUNTY, 1965-66.

Introduction

A study of the curricular offerings and the physical facilities and classrooms was conducted in Cass County's six high school buildings: Cassopolis High School, Dowagiac Central Junior High School, Dowagiac Union High School, Edwardsburg High School, Edwardsburg Junior High School, and Marcellus High School. This study included the gathering of data and teacher opinions; visitations to all the schools named; numerous conferences with individual teachers, administrators, and counselors; and meetings with groups of teachers. This study was conducted in the curriculum areas of agriculture, business, home economics, and industrial arts. This chapter includes tables showing all the offerings in these areas, the number of sections (S) of each course, and the number of students (N) enrolled in each. It should be pointed out that the total numbers in each table do not necessarily represent total number of different individual students. This is true because many students are taking more than one course in a subject field. For example, a student might be taking Mechanical Drawing II, Woodworking II and Machine Shop II; numerous other combinations are also possible.

The writer wishes to emphasize here that in this section it is not the intent to be critical for "the sake of being critical" or critical of any school or teacher (who in many cases called the critical appraisal to the writer's attention) or any group. The sole purpose is to present in writing and/or re-emphasize, in most

cases, a deficiency in terms of contemporary educational standards that need attention in order to improve the vocational and occupational education for the young people of Cass County.

Agriculture

There are two programs of Vocational Agriculture in Cass County: Cassopolis High School and Dowagiac High School. The former school has been noted for its traditional strong support for agriculture and this year expanded into a 2 man department. Efforts have also been made this year to begin an Agricultural Mechanics program at Cassopolis High School. Table 34 shows the number of youth who are participating in these two programs. Reimbursement under the Vocational Education Act is received for both of these programs.

TABLE 34

AGRICULTURE OFFERINGS IN LOCAL HIGH SCHOOLS, 1965-66

Title of Course	Dowagiac		Cassopolis		Total	
	S	N	S	N	S	N
Agriculture I	1	22	2	*50	3	72
Agriculture II	1	21	1	17	2	38

Horticulture	1	21			1	21
Total	5	102	5	103	10	205

* Includes 1 section of 25 from Edwardsburg High School.

Note: Column heading S denotes sections and N denotes students enrolled.

The agriculture classroom at Dowagiac High School is supplemented with a work room area, both are relatively new and adequate. There is a definite need for proper storage, adequate laboratory facilities for varied agricultural related activities,

and traditional classroom furniture in this room is not satisfactory. No provisions or offerings are made at Dowagiac High School for Farm Mechanics. The classroom facility at Cassopolis High School is extremely poor. The present shop facility is a very long way from being adequate both in equipment need and a farm shop design.

In an experimental program this year, Edwardsburg High School daily sends 25 students for agriculture class to Cassopolis High School, the latter school provides the program of instruction, instructor, and facilities. All indications are that this will continue and current plans are to expand the exchange to two sections for next year.

The programs of agriculture are in need of being broadened, such as agriculture mechanics on a two or three hour per day basis, horticulture, floriculture and forestry.

Serious consideration and study should be given to creation of a county wide program of Vocational Agriculture centered at Cassopolis High School. This would necessitate the building of new facilities that would include classroom facilities for the varied agricultural subjects, office spaces for counseling and instructors, laboratory facilities, and fully equipped farm shop facilities, designed and utilized for agricultural mechanics.

Business Education

All four high schools are offering a fairly adequate program in teaching two years of typing and one year of bookkeeping and shorthand at the tenth, eleventh, and twelfth grade levels. This is clearly shown in Table 35.

TABLE 35

BUSINESS EDUCATION OFFERINGS IN LOCAL HIGH SCHOOLS, 1965-66

Title of Course	Dowagiac		Cassopolis		Edwardsburg		Marcellus		Totals	
	S	N	S	N	S	N	S	N	S	N

Totals	25	576	14	318	12	270	9	217	60	1381

* Denotes a one semester course

Table 35 shows that Dowagiac is providing a wider range of courses than all other schools. The large number of students enrolled in Typing I in all schools shows the increased interest of all students to obtain this skill; in more cases for personal utilitarian value rather than reasons of seeking a salable skill. In Cassopolis and Edwardsburg High School typing classrooms are scheduled to the full capacity.

In terms of facilities, equipment, and program, the Business Education Department of Dowagiac High School would probably rank very high among Cass County's vocational education programs. However, there is a definite need as indicated in previous parts of this report and also a keen interest on the part of the instructors, to expand vocational offerings. Expansion and improvements could be made in distributive education, cooperative

training, and business management; this means added room space, facilities, equipment, and instructors.

The business education facilities and equipment at Edwardsburg High School are adequate for the present program, which is minimal. It is the only Business Education program in the county that is partially reimbursed under the terms of the Vocational Education Act. Improvement and expansion of this program depends upon additional facilities and equipment. With the expected increase in size of that high school, make-shift or temporary re-arrangements would not be advisable or considered wise educationally or economically in the long range.

The enrollment of Marcellus High School is too small to allow a diversified curriculum except at an exorbitant expense. This exorbitant expense places any extended program of vocational education out of the financial reach of the local high school. Therefore, under existing circumstances, any possible desire to adequately prepare the Marcellus youth for the world of work must for the most part be found among the following possibilities: area vocational education programs, co-operative arrangements with neighboring schools, or tuition students on a part-time basis for vocational courses. Although the Business Education facilities are probably the better teaching stations, it must be emphasized that the present high school building at Marcellus, if it would ever pass the fire and safety standards, it would certainly fail mid-twentieth century standards for school buildings. Any needed staff and program expansion, either academic or vocational, are virtually impossible at the present building in Marcellus.

At Cassopolis High School, the Business Education program

is minimal; possibilities for improvement and expansion are very limited in the present facilities. There is a complete lack of any furniture designed for business education. The availability of equipment for office practice and electric typewriters leaves much to be desired.

Considering the evidence presented previously there appears a definite need for all the local high schools to begin providing opportunities for exploration work and begin a program of vocational guidance in the junior high school grades. In business education this might be business arithmetic, general business, business exploratory, or personal typing. A second consideration should be given to development of the whole field of distributive education (selling, merchandising, marketing, advertising, retailing, consumer education, distributive occupations, etc.) and cooperative training in business education. The possibility of a full-time vocationally-certified co-ordinator of Cooperative Training for a business education program as approved by the Division of Vocational Education of the State Department of Education to serve all the schools should be studied carefully.

Home Economics

All the high schools provided at least two years of home economics or homemaking (terms used interchangeably) and comply with the standards that have been set forth under the original Smith Hughes Act. Only Dowagiac Schools provides opportunity to eighth graders for homemaking. Table 36 shows the extent of this program in local schools.

TABLE 36

HOME ECONOMICS (HOMEMAKING) OFFERINGS IN LOCAL HIGH SCHOOLS, 1965-66

Title of Course	Dowagiac		Cassopolis		Edwardsburg		Marcellus		Totals	
	S	N	S	N	S	N	S	N	S	N
Home Economics-eighth grade	8	132							8	132
Home Economics I	4	83	2	53	2	48	1	24	9	208
Home Economics II	3	62	1	20	2	33	1	13	7	128
Home Economics III			1	23	1	17			2	40
Home Economics IV			1	19					1	19
Home Economics III & IV	1	29							1	29
Living for Moderns	1	16							1	16
Totals	17	322	5	115	5	98	2	37	29	572

The facilities at Edwardsburg and Dowagiac High Schools are most adequate. At Edwardsburg and Cassopolis facilities are utilized to capacity. The home economic station at Edwardsburg can be utilized as a two teacher station but the Cassopolis facilities leaves much to be desired, as does the one at Marcellus. Improvements need to be made with the home economics station at Dowagiac Junior High.

It would seem that experience in home economics should be available to all junior high school girls in the county and not just at Dowagiac.

Industrial Arts

Table 37 shows there is much to be desired in the pre-vocational offerings of shop classes in half the schools and much improvement needed in the other half. One of the things that Table 37 does not reveal is the number of boys in Cass County who are not receiving any instruction in the area of the manual or

industrial arts. A close estimate would probably show the figure to be higher than 50 percent.

TABLE 37

INDUSTRIAL ARTS OFFERINGS IN LOCAL HIGH SCHOOLS, 1965-66

Totals	18	345	7	136	15	333	3	73	43	887

* Includes one section of 18 students from Cassopolis High School

NOT SHOWN ABOVE: 1 semester of shop experience provided for 8th graders at Dowagiac Junior High School and 8 weeks of Arts and Crafts experiences provided for 8th graders at Cassopolis High School.

Inability to secure qualified personnel, limited facilities and equipment, and in some cases completely inadequate facilities are evidently the main reasons for the small numbers. It was found in most cases that facilities were being taxed to capacity.

The present facilities at Marcellus High School can hardly warrant leaving the shop courses in the program of studies.

Storage space and facilities are either wholly lack or insufficient in other school shops. Limited space is a crucial matter at Edwardsburg High School. The present metal shop arrangement, of students moving from the senior high school to junior high, is not a satisfactory one.

The absence of power mechanics of any kind (due to inability to find a qualified teacher at Dowagiac) in Table 37 is a serious handicap. The almost complete lack of shop experience for junior high school youth (only Dowagiac provides a minimal program below ninth grade level) can hardly be tolerated any longer, if there is any sincere desire to improve occupational training for youth.

The need based on the study of local industry and the national labor changes and interest based on the study of seniors is ample evidence to broaden the scope of the pre-vocational programs at the local high school level and to develop new programs more specifically vocational in nature on a county-wide basis. Such programs can be on a block-of-time basis and include cooperative training opportunities.

Selected Opinions Expressed By Cass County Educators

Opinions were received from forty administrators, counselors, and teachers of the vocational education subjects shown in the four preceding tables. Their expressed opinions on six selected questions were as follows:

If you think vocational education needs improvement, which of the following developments would you recommend? (Respondents were permitted to check more than one)

	Number Favoring
Substantial improvement of the present vocational education programs in the existing high schools.	17
Specialization in a particular area of vocational or occupational education by each high school with cooperative sharing of facilities, faculty, programs, etc. and the exchange of students among all high schools in the county.	20
Creation of an area vocational-technical facility center designed for secondary (high school) and post high school occupational training on the Southwestern Michigan College campus.	28
Development of a program of tuitioning students on a part-time basis from our county high schools to neighboring vocational training centers which are in the planning stages, such as the South Bend Vocational High School.	8
Creating an office of Director of Vocational Education for Cass County to coordinate the programs of occupational training in our county schools and to serve as a liaison to business and industry.	18

In terms of broad occupational categories where you think these programs should be offered. (Respondents were permitted to check more than one or express no opinion).

	In Existing High Schools	In an Area Program	In The Community College
Agricultural Education	19	18	9
Distributive Education	14	13	15
Office Education	27	11	12
Home Economics Education	30	7	2
Industrial Education(power mechanics, machine shop, drawing, etc.)	17	19	16
Advanced Drafting	6	12	21
Technician Education	2	14	21

If it is determined that area vocational education programs should be operated, please indicate which of the following administrative arrangements you would favor:

	Number Not Favoring	Number Favoring
Two or more local school districts cooperatively operating such programs	3	22
The intermediate school district providing such programs for its constituent districts	13	9
The provision of such programs by Southwestern Michigan College for high school youth	6	26
The provision of such programs by Southwestern Michigan College for post-high school students and adults	1	31
State operated and administered schools or centers for such programs	18	6
Industry and/or trade union sponsored	18	5

Assuming your school district would be reimbursed for transportation, how far would you be willing to transport students to an area vocation education program or center? (Check below the greatest distance which would be practical):

5	Less than 10 miles	4	20 to 30 miles
27	10 to 20 miles	1	30 to 40 miles

What type of students do you feel should be enrolled in area vocational education programs?

	Should Not Be Enrolled	Should Be Enrolled
Youth who have dropped out of school	1	36
High school youth who plan to seek employment immediately after graduation from high school	1	37
High school youth who plan to secure additional occupational training after graduation from high school	2	32
High school youth who plan to secure a four-year college degree	26	5
Post-high school youth and adults who are preparing to enter the labor market and are full-time students	1	28
Youth and adults unemployed or working who need training or retraining to achieve employment stability	0	35

Summary

In summary of the foregoing there appears to be a realistic feeling on part of local educators that programs of vocational education can not be handled by the local school district alone. There is indicated a willingness to cooperate with neighboring schools and a definite desire to have Southwestern Michigan College make available its vocational education facilities for the use of eleventh and twelfth grade high school students as soon as these facilities are built. The county's community college is within a 20 mile radius of all four high schools, which is the maximum distance that most local school people would be willing to transport students. This would mean a dual area usage of the community college's vocational education facilities which has certain disadvantages. On the other hand, it would provide for a wider variety of occupational preparation opportunities, for greater depth of specific training, for more extensive equipment, and for a more specialized staff than would be possible under other arrangements.

CHAPTER XI

RECOMMENDATIONS

The Cass County Advisory Committee for the Study of Vocational-Technical Education, after studying the educational needs for vocational and technical opportunities for youth of Cass County, recommends:

1. That the four high school districts of the Lewis Cass Intermediate School District cooperatively employ a Director of Vocational Education and that he assume the following responsibilities:

   (1) To provide leadership in program development.

   (2) To encourage and develop cooperative instructional programs among the respective high schools.

   (3) To cooperate with the community college in the development of secondary and post-secondary programs.

   (4) To coordinate and articulate the total vocational program in the secondary schools of Cass County.

   (5) To act as chairman and work with a Cass County Advisory Committee on Vocational Education.

   (6) To assist, upon request, with the recruiting, selection and assignment of personnel in vocational education.

   (7) To organize and direct the in-service education for professional personnel in vocational education and guidance.

   (8) To assist, upon request, with the preparation of budgets for vocational education programs.

   (9) To work with the Division of Vocational Education of the Michigan Department of Education.

   (10) To make an annual report of vocational education in Cass County.

   (11) To assume responsibility for the promotion and publicity of vocational education in the county.

2. That introductory programs be provided in all high schools for the development of basic skills, attitudes and habits needed for entrance into the world of work.

3. That advanced courses in specific vocational areas be offered by a high school including students in the curriculum on a county-wide basis i.e. Cassopolis and Edwardsburg are presently conducting cooperative exchange programs in agriculture and general metal shop.

4. That vocational education in Cass County include the development of skills, attitudes, and habits necessary for entry and advancement in the world of work.

5. That each high school be encouraged to develop and/or expand a cooperative occupational program as approved by the Vocational Division of the Michigan Department of Education.

6. That each guidance department in the county make a definite attempt to improve and expand their services to include and improve vocational counseling.

7. That an expanded and improved vocational program be carried out through the use and expansion of present educational institutions in Cass County.

8. That a continuing Advisory Committee to the Intermediate District, with representation from agriculture, management, and labor, meet at least twice a year, and other times necessary, with a Director of Vocational Education as Chairman.

*VOCATIONAL EDUCATION; *AREA VOCATIONAL SCHOOLS; TECHNICAL EDUCATION; OCCUPATIONAL SURVEYS; COOPERATIVE EDUCATION; SPECIAL EDUCATION; SURVEYS; *EDUCATIONAL NEEDS; POPULATION TRENDS; STUDENT ENROLLMENT; GRADUATE SURVEYS; EMPLOYMENT TRENDS; HIGH SCHOOL STUDENTS; PARENT ATTITUDES; *PROGRAM ATTITUDES; EDUCATIONAL INTEREST; EMPLOYER ATTITUDES; MANPOWER NEEDS; CURRICULUM; QUESTIONNAIRES
OTTAWA COUNTY; MICHIGAN

A study of the Ottawa area was made to determine what vocational-technical training programs and facilities were needed to meet the needs of an estimated population of 107,000 and a K-12 school enrollment of 35,000. Survey questionnaires were received from (1) 1,520 seniors of the 1964-65 high school classes, (2) 683 graduates of the 1959, 1962, and 1963 classes, (3) 1,706 parents of 5th and 9th grade students, (4) 418 business, industry, and agriculture firms, (5) 173 farmers, and (6) 20 agriculturally related businesses. Separate committees were organized to study legislation and finance and to investigate the school programs in business and distribution, industry, home economics and food services, agriculture, and special education. Recommendations included (1) A vocational-technical center or centers should be constructed in the area to provide a breadth of offerings in specialized preparatory, apprentice, and adult occupational education, (2) The recommended centers should be available to all students from public, parochial, or private schools, (3) Students should continue to be identified with their local schools for general academic programs, extra-curricular activities, and graduation, and (4) Present cooperative occupational training programs should be continued and improved, and should be coordinated in the office of the administrator of the vocational-technical center. Division of Vocational Education

and

The Nine School Districts in Ottawa County

and

The Districts of Hamilton and Saugatuck in Allegan County

Grand Haven, Michigan

March, 1966

FOREWARD

The Ottawa Area Vocational-Technical study began with a group of interested people from the northern part of Ottawa County. It was their intent to study future vocational-technical needs for that area. However, to qualify for funds under the Vocational Act of 1963, it was recommended to expand the study area to include all of Ottawa County and the northern part of Allegan County.

The Ottawa Area Intermediate School District Board consented to serve as the educational agency for the study with the participation of eleven school districts located in Ottawa and Allegan Counties. This area vocational study is one of many being conducted in Michigan covering most of the geographical area of the State.

It is the hope of the survey directors that the results of this study will give direction to the school administrators to develop a realistic vocational-technical program that will meet the needs of today's youth and adults.

The co-directors thank all the committee members who worked so diligently to complete their assigned task. Our thanks also goes to the project consultant, Mr. Gordon Johnson, for his leadership and guidance in assisting us organize and conduct the study.

CHAPTER I

Introduction

Education is the key to our national strength, and educators all over the country are seeking ways to develop a sound, balanced education curriculum, recognizing the need for vocational education in addition to general education. All phases of vocational-technical education throughout the country are being scrutinized because of the vital need to prepare people to assume their respective place in society.

Need for Study

Approximately 50 per cent of our graduates go on to higher education and many of the remaining 50 per cent are ill-prepared to enter today's automated society and the world of work. A lack of adequate vocational-technical training programs force students into curriculums not in line with their vocational objectivies. These facts point out the need for improving existing vocational programs and developing new ones in vocational-technical education equally available to all students in the study area.

Purpose of the Study

The purpose of the Ottawa area study is to determine what vocational-technical training programs and facilities are needed in this geographical area to meet the needs of all people. The objective of the study is to gather, interpret, and present information basic to the development of vocational and technical training programs and facilities. This information should serve as a guide for school boards and school administrators in developing future programs as well as making better use of present facilities. Basic areas explored in the study are:

1. What are the labor market needs, including skills and training?

2. What happens to our graduates? Where do they obtain the training they need, and what kind of training and opportunities should be provided in this area?

3. What kind of training, facilities, and opportunities should be provided for handicapped children?

4. What facilities and opportunities are needed to upgrade those already employed?

5. How can the required training facilities be financed?

6. What areas of the present school programs should be strengthened?

7. What training facilities and programs are needed to meet the needs of girls?

8. How many students go on to college or institutes of higher education? How many are in need of vocational-technical training?

Procedure

In February, 1965, approval was granted by the Michigan Department of Vocational Education to conduct an area study consisting of Ottawa County and the school districts of Hamilton and Saugatuck. This survey was made possible through the Vocational Act of 1963, which permits the Department of Vocational Education to pay a portion of the survey cost. The remaining portion was to be provided by the participating districts on public school membership basis. The Boards of Education approved the share of the cost assigned to their districts. These districts include:

Allendale Public Schools
Coopersville Public Schools
Grand Haven Public Schools
Hamilton Public Schools
Holland Public Schools
Hudsonville Public Schools
Jenison Public Schools
Saugatuck Public Schools
Spring Lake Public Schools
West Ottawa Public Schools
Zeeland Public Schools

The study covered an area with an estimated population of 107,000 people, and a K-12 grade school enrollment of 35,000. The state equalized evaluation of the cooperating school districts totals approximately $370,000,000. The study was one of twenty-two approved in Michigan (at the time this study was started) by the Department of Education, through the Office of Vocational Education.

The Ottawa Area School District served as the educational agency for the study. Superintendent Jennie Kaufman was secretary to a steering committee composed of the superintendents of all the cooperating school districts. Don Gebraad, Director, Vocational Education, Holland Public Schools, and Gene Rothi, Coordinator, Guidance and Counseling, Grand Haven Public Schools, were appointed co-directors for the study. Gordon Johnson, Administrative Assistant, School of Applied Arts and Sciences, Western Michigan University, served as project consultant.

At the March 8, 1965, meeting of the superintendents, the proposed areas for study were selected. It was decided to organize the following committees to investigate the proposed areas:

1. Legislation & Finance
2. Business & Distribution
3. Industrial
4. Home Economics & Food Services
5. Agriculture
6. Business-Industry-Agriculture
7. Special Education

The Boards of Education, through their superintendents, submitted the names of people whom they felt would contribute to and serve on the above mentioned committees. Mr. Paul Johnson, President of Dake Corporation in Grand Haven, and Mr. Ab Martin, General Manager of General Electric in Holland, were recommended and approved as co-chairmen for the entire study pending their acceptance, which was received in May.

The survey instruments to be used in the study were selected and developed for approval by the steering committee. The instruments are similar to those used in other area studies so the results may be used on a statewide basis.

With the approval of the steering committee the following instruments were selected:

1. Business-Industry-Agriculture Survey
2. Curriculum and Facilities Survey
3. Follow-up of 1959 and 1962 graduates
4. The 1965 Graduate Class Survey
5. Parent Opinionnaire of 5th and 9th grade students
6. Agriculture Survey

Mailing lists for survey recipients were compiled with the aid of schools, chambers of commerce, Committee for Economic Development, and telephone directories.

A letter was sent to the people suggested for committee membership asking their acceptance and notifying them of a general meeting to be held at West Ottawa High School, June 1, 1965.

At this meeting an explanation and history of the Ottawa Area Vocational-Technical Study was explained. The committees then met separately to organize and determine procedures for completing their assignments.

During the course of the summer and up to the present time there were 34 individual committee meetings. In addition, there were 18 general meetings involving the general co-chairmen, the co-directors, the consultant and the superintendents.

At the time of organization the committees were headed by co-chairmen representing the north and south areas of the study. This was felt necessary to allow for the separate population concentrations in Ottawa County. In spite of greater travel, each committee decided to hold all their meetings as a single unit and to alternate as much as possible their meeting sites. This tends to show the feeling of cooperation exhibited by committeemen throughout the study time.

*OTTAWA COUNTY POPULATION CHART

Figure 4

* The population does not include the figures for the Hamilton and Saugatuck areas. It is estimated that Hamilton has a population of approximately 3,250 and Saugatuck 1,350.

Figure 5

OTTAWA COUNTY LABOR FORCE

1964

The total average labor force for Ottawa County for 1964 was 31,500. The average unemployment for this same period was 1,100 for an unemployment index of approximately 3.5 per cent. Following is a breakdown of the job classifications and numbers employed in each classification:

Classification	No. employed
Wage & salaried employees	24,700
Manufacturing employees	14,000
Non-manufacturing employees	8,400
Government employees	2,300
Self-employed (includes farmers, proprietors, owners, etc.)	6,800
Total	*56,200

*This total exceeds the number in the labor force in Ottawa County. Some individuals may be counted in more than one category--e.g. an individual may be counted as a salaried employee and also as a government employee.

Table 4

LEVEL OF EDUCATIONAL ATTAINMENT

Figure 6

Source: "Education for a Changing World of Work". U. S. Office of Education

Students should not be permitted to leave high school, even by graduation, without being provided an opportunity to receive occupational skills and knowledge for initial employment. It is imperative that each student have the opportunity to achieve to the utmost of his ability.

RAPID POPULATION GROWTH WILL OCCUR
AMONG YOUTH REACHING WORKING AGE

Figure 7

NEW YOUNG WORKERS ENTERING LABOR FORCE 1950-1970

Source: "Manpower -- Challenge of the 1960s". U. S. Department of Labor

Y O U N G W O R K E R S

Will have to prepare themselves for a rapidly changing and more complex world of work

Will need more education and training, with better guidance and counseling

Will have to compete more keenly for the better jobs

EMPLOYMENT WILL CONTINUE TO GROW FASTER IN THE SERVICE INDUSTRIES

THAN IN THE PRODUCTION INDUSTRIES

Figure 8

Source: "Manpower — Challenge of the 1960s".
U. S. Department of Labor

As our technology advances, proportionately fewer workers will be needed to produce the goods we use. More workers will be needed to provide the increasing service required as our standard of living goes up.

INDUSTRIES WILL VARY WIDELY IN THEIR RATE OF GROWTH

Figure 9

Source: "Manpower -- Challenge of the 1960s". U. S. Department of Labor

BETWEEN 1960 AND 1970 TOTAL EMPLOYMENT WILL RISE BY ABOUT 20%

The above table shows how the major industries in the United States are expected to grow in the next ten years, compared with the overall rise in total employment.

THE LARGEST PER CENT OF CHANGE IN EMPLOYMENT WILL OCCUR

IN OCCUPATIONS REQUIRING THE MOST EDUCATION AND TRAINING

Figure 10

PERCENT CHANGE IN EMPLOYMENT 1960-1970

Source: "Manpower -- Challenge of the 1960s". U. S. Department of Labor

These anticipated changes in employment in various occupation groups during the coming decade will result from several major causes:

*The continuing shift from an agricultural economy to one that is predominantly industrial

*The rapid expansion in research and development activities

*The tremendously rapid increase in application of technological improvements

*The increasing size and complexity of business organization

*The widespread growth of record keeping among all types of enterprises

*The growing need for educational and medical services

THE KIND AND AMOUNT OF EDUCATION YOUNG PERSONS RECEIVE AFFECT THEIR LIFETIME CAREERS

Table 6

OCCUPATIONS	EDUCATION — PERCENT WITH: LESS THAN HIGH SCHOOL GRADUATION	HIGH SCHOOL GRADUATION	SOME COLLEGE EDUCATION

20

Those persons with more schooling usually have higher earnings.

THE NUMBER OF WOMEN WORKERS WILL INCREASE

AT NEARLY TWICE THE RATE FOR MEN

Figure 11

PERCENT OF WOMEN IN EACH AGE GROUP
WHO WILL BE IN THE LABOR FORCE IN 1970

Source: "Manpower -- Challenge of the 1960s". U. S. Department of Labor

BY 1970, there will be about 30 million women workers,

six million more than in 1960. This represents a 25% increase for women, as compared to a 15% increase for men.

One out of every three workers will be a woman.

Figure 12

*LABOR FORCE BALANCE SHEET FOR THE 1960S

		(MILLIONS)
Number of workers in 1960		73.6
SUBTRACT:		
Withdrawals from the labor force because of death, retirement, marriage, childbearing, etc.	-15.5	
1960 workers still in labor force in 1970		58.1
ADD:		
Young workers coming into the labor force during the 1960s		26.0
Women returning to the labor force during the 1960s		3.0
Number of workers in 1970		87.1

1970 more than 100 million persons will be working at some time during the year--a number equal to the total population of the United States around 1920.

CHAPTER III

This chapter consists of: Senior Class Survey; Parent Opinionnaire; and Graduate Survey 1959 - 1962. A copy of each survey instrument used follows the general summary of that survey in this chapter. The data pertaining to these surveys are reported by percentage for each area of response.

Senior Class Survey

The Senior Class Survey was administered in each public high school under the direction of the principal.

The purpose of the questionnaire was to determine what course of study the graduating senior pursued in high school; what plans were made for the future; and the effectiveness of the guidance departments (if available) in assisting them to develop these plans.

General Summary

There were 1520 seniors, 766 males and 751 females, present in school who completed the survey on the date of administration. The results of this study revealed:

1. 1091 seniors were completing a college preparatory course or general program while in high school.

2. 344 were enrolled in a business or vocational-trade course of study.

3. 604 indicated hopes of completing four years of college or more.

4. 722 had no plans for going on to college right after graduation.

5. 395 of the 722 planned to go right to work if their job prospect materialized.

6. 150 of the 722 wanted to take some technical and trade courses or business and commercial courses after graduation.

7. 475 of those planning on going on to school intended to take programs in the vocational and technical areas.

8. 899 seniors were employed while attending high school. Only 15 per cent felt this was the kind of work they would like to do.

9. The question about relationship of high school to the type of work they eventually expect to do brought a significant response. The percentage ran from 64 per cent in one school to 31.5 per cent in another school who saw little direct relationship.

OTTAWA AREA VOCATIONAL - TECHNICAL EDUCATION
Study Committee

1964-65 Senior Class Survey

Name _____ Name of High School 1520 Respondents

Sex: Male 50.5 Female 49.5

1. What is your present course of study?

48.4 1. College Preparatory
24.8 2. General
14.4 3. Commercial (Business)
8.7 4. Vocational-Trade-Technical
3.7 5. Other

Why? _____

2. How certain are you of going to college after high school graduation?

47.3 1. Very certain
12.3 2. Fairly certain
23.3 3. No intention of going to college
16.5 4. Don't know

3. If you do not now plan to go to college upon graduation, what do you plan to do?

5.1 1. Get married and become a full-time housewife
54.7 2. Go to work
14.5 3. Take some technical or trade courses in a trade school
6.2 4. Take some business or commercial courses in a business school
9.3 5. Go into the armed services
10.1 6. Undecided

4. How far in school do you plan to go?

21.5 1. Through high school
26.9 2. Some training beyond high school
11 3. Two years of college
25.9 4. Four years of college
14.7 5. College plus advanced degree

5. If you plan to go on to school, what type of program would you most likely follow?

19.5 1. Pre-professional
24.7 2. Industrial, technical, vocational courses
14.5 3. Business or secretarial courses
20.7 4. General education (Degree Program)
20.6 5. _____

6. If you plan to attend college for TWO YEARS OR LESS, what occupation or area do you plan to enter after you complete your education? (Check one choice only.)

BUSINESS AREA

3.4 1. Accounting or bookkeeping
.2 2. Banking and finance
3.2 3. Business administration
3.2 4. Business machines
2.2 5. Data processing
0 6. Hotel-motel management

2.6 7. Receptionist
2.1 8. Retailing and sales
4.8 9. Secretarial
1.6 10. Stenographic-clerical
.4 11. Switchboard operator
1.3 12. Typist

HEALTH RELATED OCCUPATIONS

.9 13. Dental technician
.7 14. Medical technician
.3 15. Medical receptionist
8.5 16. Practical nurse (one year program)
4.1 17. Registered nurse (two year program)

TRADES AND INDUSTRY

7.9 18. Auto or airplane mechanic
8.9 19. Beautician or barber
3.7 20. Building trades
4.7 21. Drafting
2.2 22. Electrical-Electronics
1.9 23. Engineering technician
.7 24. Foods preparation
0 25. Hydraulics and pneumatics
1.3 26. Illustration and commercial art
1.5 27. Industrial technician

COMMUNICATIONS AREA

.6 28. Advertising
.6 29. Journalist or writer
2.3 30. Radio-TV-Theatre

MISCELLANEOUS

1.9 31. Agriculture
1.3 32. Art
.6 33. Homemaking
2.1 34. Music
18.2 35. No answer

If none of the above listed occupations or areas fit your plans, explain or describe your occupational plans._____

_____

7. To what extent has the counseling you received in school been helpful to you?

a. 6.8 Didn't have any in high school
b. 6.9 It wasn't helpful at all
c. 17 Very little help
d. 54.3 Some help
e. 15 Extremely helpful

8. To what extent did the counseling you received help you with personal problems?

a. 55.1 Didn't need any
b. 8.8 It wasn't helpful at all
c. 13.5 Very little help
d. 18.3 Some help
e. 4.3 Extremely helpful

9. Did you ever use the counseling services voluntarily?

a. 73.6 Yes
b. 26.4 No

10. To what extent did the counseling you received help you with school problems?

a. 29.9 Didn't need any
b. 6.5 It wasn't helpful at all
c. 16.2 Very little help
d. 39.6 Some help
e. 7.8 Extremely helpful

11. Which high school subjects do you feel will be most helpful to you in the future?

_____

_____

12. Which subjects do you think would have been helpful to you that were not offered in high school?

_____

_____

13. To what extent did the counseling you received in high school help you choose your career?

a. 31.6 Didn't need any
b. 18 It wasn't helpful at all
c. 19.9 Very little help
d. 24.8 Some help
e. 5.7 Extremely helpful

14. If you are now employed, how did you obtain the job?

a. 38.8 Through family or friend
b. .5 Public employment agency
c. .2 Private employment agency
d. 2.1 Newspaper advertisement
e. 17.6 Through the school
What person in school_____
f. 40.8 Found it yourself

15. If you are now employed, to what extent did the counseling you received in high school help you in choosing this kind of work?

a. 63.1 Didn't need any
b. 21.7 It wasn't helpful at all
c. 6.7 Very little help
d. 6.5 Some help
e. 2 Extremely helpful

16. Is this the kind of work you intend to do for your lifetime livelihood?

a. 15.8 Yes
b. 65.4 No If no, indicate your preference_____
c. 18.8 Undecided

17. If you plan to work upon graduation, what is the relation of your high school training to the type of work you expect to do?

a. 38 No relation at all
b. 50.3 Gave me a general background
c. 11.7 Gave me a specific background

18. Where will you be employed next fall?

a. 41.3 Within 50 miles of the high school I am attending
b. 6.2 Other cities in Michigan
c. 7.4 Out of state
d. 45.1 Don't know

19. If you plan to attend a school or college after high school, have you been accepted?

a. 74.6 Yes
b. 25.4 No

20. What school do you plan to attend?

School	City	State

21. What will be your course of study?

_____

22. What career do you plan for yourself?

_____

23. To what extent did the counseling you received in high school help you in choosing a college?

a. 34.8 Didn't need any
b. 15.4 It wasn't helpful at all
c. 13.7 Very little help
d. 26.3 Some help
e. 9.8 Extremely helpful

24. Your suggestions for and evaluations of your high school would be appreciated.

_____
_____
_____

Follow-up Study

The Follow-up Survey was mailed to all public high school graduates of the classes of 1959 and 1962. (Except West Ottawa, the class of 1963 was surveyed.)

Purpose of the Survey

1. Determine what the graduates had been doing since completing high school.

2. Post-high school educational institutions attended, and the curriculum followed.

3. Present employment, type of work, and how secured.

4. Number of occupational changes and reason (s) for changing.

The answer differed for each class, therefore, it was necessary to make a separate analysis for each year. For example, many of the 1962 graduates are still in college. The number of job experiences were more numerous and varied for the 1959 graduates.

General Summary

The 683 returns represents 32.9 per cent of the total number mailed to graduates. The study revealed:

1. 115 students listed reading as a problem while in high school.

2. 246 students listed poor study habits while in high school.

3. 353 students listed college preparatory curriculum as their program in high school.

4. 423 of those returning the survey had attended or were presently enrolled in college or other post-high school institution.

5. A better return of surveys came from those who went on to post-high school training than those who did not go on to school.

6. Slightly over 50 per cent of those working are working within 50 miles of the high school from which they graduated.

7. Direct application is the most successful and used method of gaining employment.

8. About 55 per cent of those answering a question regarding placement on jobs felt the schools should provide this service.

9. The combined influences of the school were cited by over 50 per cent of students as directing them in their vocational choice.

10. The parent was the single most effective influence in determining occupational choice.

11. 421 of the 683 returning a survey form worked while attending high school.

12. 72 per cent of the class of 1959 are married, whereas only 35 per cent of the 1962 graduates are married.

THANK YOU FOR YOUR COOPERATION.

Parent Opinionnaire

Parents of all public school fifth and ninth graders in the study area were asked to complete the Parent Opinionnaire. Due to the fact there was no appreciable differences in the responses of the fifth and ninth grade parents, the totals were combined into one analysis.

Parents of ninth graders were selected because this is a critical time for curriculum planning for a high school program best suited for their child's needs. Considerable attention at this time would be directed to the available programs in the vocational-technical areas in addition to the traditional subject matter.

The fifth grade parents were chosen as their children would receive the benefits of an expanded and improved program for vocational-technical education.

General Summary

Of 1706 surveys, 46.6 per cent were returned. The results are as follows:

1. 424 families indicated a definite interest in vocational-technical courses in a night program if a facility were available.

2. 473 families, or 59 per cent answering the question about where training should be given, suggested a vocational-technical training facility or post high school facility like a junior college.

3. Occupational areas in order of preference were: electronics, machine tool, automotive, business machines, building trades, welding, woodworking, hospital-aides, appliance repair, and retail and sales. (These figures are similar to national statistics.)

4. 1604 families felt a definite need for academic and vocational counseling in junior and senior high school.

5. 1532 families favored courses of an exploratory nature to help students make a more realistic occupational choice.

6. 325 families felt existing facilities should be expanded to accommodate students from other school districts.

7. 368 families felt a new vocational-technical center should be built to serve all students in the area.

8. 875 families favored a combination of the two previous statements.

9. 1529 families answered the question pertaining to financing a program and 1334 favored a county-wide millage.

PARENT OPINIONNAIRE OF 5TH & 9TH GRADE STUDENTS

1706 Respondents

1. In your opinion, should vocational and academic counseling be provided in the junior and senior high school?
   Yes 96.22 No 3.77

2. In your opinion should the junior and senior high schools provide the opportunity to study information about occupational areas? Yes 95.74 No 4.25

3. In your opinion, should courses of an exploratory nature be provided in the junior and senior high school to enable students to make more realistic choices of occupational objectives?
   Yes 93.52 No 6.47

4. In your opinion, should the schools provide instruction in vocational education in several occupational areas?
   Yes 93.76 No 6.23

5. If your answer to number 4 is "yes", what kinds of courses do you think should be included? (Check any number)

67.76	Machine Tool	36.69	Data Processing
46.48	Welding	63.24	Business Machines
12.36	Foundry	38.92	Retail and Sales
63.83	Automotive	38.92	Medical Technology
42.32	Appliance Repair	42.73	Hospital Aides
45.72	Woodworking	26.14	Food Service
58.55	Building Trades	32.94	Graphic Arts (Printing)
35.75	Agriculture	32.94	Work Attitudes
67.99	Electronics	10.55	_____ (Others)
		3.92	_____

6. In order to provide adequate training in the above vocational courses, additional buildings and equipment will be needed.

In your opinion (Check one):

20.72 (a) Should existing vocational classrooms and shops be expanded in order to accommodate students from several school districts?

23.46 (b) Should a new vocational center be built and available to all students in the Ottawa Vocational-Technical Study Area?

55.80 (c) Should a combination of both A & B be considered?

7. The type of instruction, equipment, and buildings needed for vocational-technical training must be financed and will require additional funds. In your opinion, would this be more easily accomplished by:

87.24 (a) County-wide millage for financing?

12.75 (b) Local school millage for financing?

8. Providing that your children are not interested in college, and occupational training in a quality vocational-technical program were made available to them, would you encourage them to avail themselves of this kind of training?

Yes 84.81 No 2.22 Possibly 12.95

9. If we have vocational-technical programs as discussed above, would you be interested in attending evening school to improve your own abilities?

Yes 25.96 No 26.20 Possibly 47.82

10. If your answer to number 9 is "yes", would you prefer this training be provided by:

30.68 (a) high school

59.72 (b) vocational-technical center

7.57 (c) Other (Specify) 2.02

CHAPTER IV

Business - Industry - Agriculture

The Business-Industry-Agriculture Committee analyzed the labor market data from the survey instrument sent to business, industry and agriculture.

The mailing lists for the survey recipients were compiled with the aid of the schools, chambers of commerce, Committee on Economic Development, and telephone directories.

Purpose of the Committee

1. Collect and analyze labor market data from the Business-Industry-Agriculture Survey.

2. Disseminate the results for the survey to the appropriate committees.

3. Determine from survey results those occupational areas which might receive additional or less emphasis and training in the schools.

4. Investigate the type of vocational-technical training facilities which are needed to provide adequate training.

Procedure for the Study

To obtain the necessary information, questionnaires were sent to employers in the Ottawa Study area. The stated purpose of the confidential survey was "to gather information and opinions from business and industrial employers to use in improving educational programs for employment-bound youth in the Ottawa County area." The response to the survey was good. Employers of various sizes were well represented. (See Table No. 1)

Table No. 1

Numbers of Employees in Participating Firms

Number of Employees	Number of Firms
1- 25	315
26- 50	56
51-100	19
101-200	11
201- & over	17

Each firm was also asked to identify their major activities. It is felt that the 418 firms that replied gave us a good sampling of the diverse economic activity in Ottawa County. (See Table No. 2)

Table No. 2

Major Activities of Participating Firms

No. of Firms	Major Activities	No. of Firms	Major Activities
24	1. Agricultural Services	28	13. Insurance
8	2. Advertising	4	14. Marine Services
15	3. Banking and Finance	6	15. Printing & Publication
10	4. Communications	20	16. Professional - not Medical or Dental
25	5. Construction	9	17. Real Estate
0	6. Education	96	18. Retailing - Not food, dairy, or drink
8	7. Entertainment and recreation	52	19. Service establishment
40	8. Food, dairy and drink	22	20. Transportation
9	9. Government-Federal, State & Local	7	21. Utilities
8	10. Health, hospital, medical, dental	27	22. Wholesaling
3	11. Hotel and Motel	85	23. Others
85	12. Industrial or Manufacturing		

The employers of Ottawa County were asked to indicate the number of people employed by them in 109 job classifications, from semi-professional to unskilled. In every category, almost all employers expected employment to increase or at least remain the same in the next four years. The employers also indicated that local labor supplies will not adequately fill the needs of their firms. Very few firms indicated a labor surplus in any of the 109 job classifications. In most areas, particularly in skilled jobs, a labor shortage was noted by a large number of firms.

The survey indicates that employers in Ottawa County do not, as a common practice, hire drop-outs except as unskilled laborers. Of the 52 per cent of the employers who have hired drop-outs in the last five years, 40 per cent have found them unsatisfactory as employees even in unskilled categories. Table No. 3 summarizes employer experience in hiring non-high school graduates. (See Table No. 3)

Table No. 3

Employers Experience in Hiring Drop-outs

Employer reaction	Per cent of Employers
Satisfactory	33
Need considerable additional education or training	27
Unsatisfactory	40

Even high school graduates may encounter some difficulties in finding suitable employment because some employers infrequently or hardly ever hire those with just a high school education. Sixty-six per cent of the firms answered the question concerning the employment of high school graduates. Of this number, 47 per cent felt they were not well prepared for employment. (See Table No. 4)

Table No. 4

Employers Experience in Hiring Young High School Graduates

Employer reaction	Per cent of Employers
Well prepared	53
Need considerable additional education or training	33
Unskilled jobs only	5
Virtually unemployable	9

Seventy-four per cent of the companies do not have a formally organized training program of their own. There is a wide spread feeling that the existing educational facilities in the Ottawa County Study Area do not entirely meet the occupational and training needs of their companies. (See Table No. 5)

Table No. 5

Extent to which Existing Facilities Meet Occupational Needs of the Company

Extent	Per cent of Firms
Very well	23
Fairly well	54
Poorly	23

Table No. 6 indicates the types of facilities employers felt were needed to meet the occupational education and training requirements of their business.

Table No. 6

Type of Education or Training Companies Would Support

Type of Education	Per cent of Firms
Substantial expansion of vocational education in existing high schools	37
Creation of an area vocational school (s) for high school training	35
A post-secondary institution	28

General Summary: Business - Industry - Agriculture Survey

A sum of 416 firms completed their survey form. This represents a 29 per cent return.

1. With only one or two exceptions they were optimistic about their economic growth between now and 1970.

2. In very few areas was there a surplus of labor.

3. In several areas there is a scarcity of trained employees.

4. Some questions regarding employer opinions and practices were interesting. Almost no one in skilled jobs, sales, business office jobs or the apprentice programs will employ anyone with less than a high school diploma.

5. 85 of 216 firms commenting on the question about employing "drop-outs", said they are definitely unsatisfactory.

6. In reply to the question as to what extent the existing educational facilities meet the occupational and training needs of a company or firm, 69 out of 294 firms said poorly.

7. A total of 168 firms commented that creation of an area vocational school and post-secondary school of the nature of a junior college to meet the needs of both high school age people and post-secondary people would be an asset to them and the area.

8. Only 89 out of 338 replies indicate any kind of training program within their firm.

9. Firms totaling 114 said they would be interested in participating in discussions and further study for improving occupational education and training at the high school and post-high school levels.

Conclusion & Recommendations

It is the feeling of those who participated in the work of this committee that substantial improvement must be made in the occupational training facilities for the Ottawa area labor force; both those presently employed and those who will enter the market in the future. There is a scarcity of labor in almost all job categories. This scarcity is chronic in the skilled areas. Our current facilities are not providing the Ottawa area labor market with young men and women sufficiently skilled to obtain and hold those jobs most demanded by employers.

It is therefore the recommendation of this committee that:

1. Existing Facilities

   a. continue to be used and improved.
   b. continue to offer exploratory subjects.
   c. may offer occupational preparation in selected subject areas and schools.

2. A new Vocational-Technical Center should be:

   a. considered immediately.
   b. built to accommodate a minimum of 500 students.
   c. located centrally.

3. The Vocational-Technical Center should provide education and/or training for:

a. every person capable of occupational employment.
b. new members of the labor force.
c. part-time high school students.
d. those seeking retraining.
e. school drop-outs.
f. interested adults.

4. The Vocational-Technical Center should include training for occupations in:

a. agriculture.
b. business and distribution.
c. health.
d. home economics.
e. industry.
f. services.
g. other women's occupations.

5. An administrator should be hired immediately to organize and develop this program.

The committee would like to emphasize the urgency of the situation. The parents, students, and employers of the study area have overwhelmingly expressed a need for new facilities. The labor situation demands that education and training be provided to adequately prepare people to meet the needs of the labor market. The schools at the present time do not have the facilities, equipment, or organization to efficiently provide this type of instruction and training.

CONFIDENTIAL CONFIDENTIAL

OTTAWA AREA VOCATIONAL - TECHNICAL STUDY

Business, Industry and Agriculture Survey

Introduction: The purpose of this questionnaire is to gather information and opinions from business and industrial employers to use in improving educational programs for employment-bound youth in the Ottawa County area. You can help by completing the questionnaire as completely as possible. The results will be used for statistical analysis and your firm will not be identified in any published reports.

Special Note: Except for large firms, the completion of the questionnaire will require only a few minutes. Study the heading of each section. If it is applicable to your firm, please check or fill in the information; if not, proceed to the next section.

General Information

1. Firm name 418 Respondents
2. Mailing address _____
3. Name of person reporting _____
4. Your job title _____
5. Telephone number _____
6. Please check the space opposite the description which best identifies the activities of your firm. Check more than one if needed.

Part II - Jobs That Do Not Require Formal, In-School Education Beyond High School

Please supply the information requested, relative to your establishment, for the skilled, semi-skilled, and unskilled jobs listed below, for which high school level education and training (plus work experience) are considered sufficient and desirable. If formal education and training beyond high school is essential or desired, do not make entries here, but see Part III, following. Be sure to consider all of the sections - A, B, C, D, E.

Type of job	Average no. on payroll 1964		Expected annual rate of employment 1966-70 (Check One)			Local supply of qualified employees (Check One)

PART IV - Employer Opinion and Practice

A. With respect to the requirements of your firm for entry employment, in what job categories do you employ young persons who have "dropped out" without finishing high school? Please put check marks under the headings which best describe your firms operating policies.

Entry job category		Frequency of employment		
		Common Practice	Infrequently	Almost Never
		(1)	(2)	(3)
1. Highly-skilled jobs	96	3	10	83
2. Business office jobs	124	3	8	113
3. Sales jobs	124	6	13	105
4. Apprenticeship for the highly-skilled trades and crafts	88	9	20	59
5. Semi-skilled jobs (assembly line and production workers, machine operators)	104	36	35	33
6. Service jobs	132	36	42	54
7. Unskilled labor	160	81	50	29

B With respect to the requirements of your firm for entry employment, in what job categories do you employ young persons who have graduated from high school? Please put check marks under the headings which best describe your firm's operating policy.

Entry job category		Frequency of employment		
		Common Practice	Infrequently	Almost Never
		(1)	(2)	(3)
1. Technician jobs	73	28	21	24
2. Highly - skilled jobs	84	30	31	23
3. Business office jobs	153	112	27	14
4. Sales jobs	133	77	25	31
5. Apprenticeship for the highly-skilled trades and crafts	97	56	22	19
6. Semi-skilled jobs (assembly line and production workers, machine operators)	102	78	12	12
7. Service jobs	128	95	16	17
8. Unskilled labor	117	80	17	17

C. Recalling the employing practices of your firm for the past five-year period, which one of the following statements best describes your evaluation of young persons who have applied for entry jobs with your organization? Please check one in each category.

1. Drop out 216

73 (a) We have employed a number of young non-high-school graduates; and we have found they can perform satisfactorily in the following jobs: (Specify)

_____

_____

58 (b) We have employed a number of young non-high-school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.

85 (c) We have found young non-high-school graduates unsatisfactory for the following reasons: _____

_____

_____

2. High School Graduate 274

145 (a) Most young high school graduates who apply seem reasonably well prepared for entry employment, and we have employed them as openings have occurred.

91 (b) We have employed a number of young high school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily.

13 (c) We have found it inadvisable to employ young high school graduates, except for unskilled jobs.

25 (d) The nature of most of the entry jobs in our firm is such that young high school graduates are virtually unemployable because of a lack of occupational education and training.

D. To what extent do existing educational facilities in the Ottawa County area meet the occupational and training needs of your company or firm? 294

68 (1) very well 157 (2) fairly well 69 (3) poorly

E. If you think occupational education and training in the area need improvement, which of the following developments would you support? (Please check, more than one if you like) 268

100 (1) Substantial expansion of vocational education programs in the existing high schools.

94 (2) Creation of an area vocational school (s) for secondary (high-school) occupational training.

74 (3) Establishment of a strong program of occupational education in a post-secondary institution.

F. Would you and your firm be interested in participating in discussions or further study of plans for improving occupational education and training at high school and post-high school levels in Ottawa County area? 316

114 (1) Yes 80 (2) No 122 (3) Undecided

G. Is there a formally organized training program in your company or firm? 338

89 (1) Yes 249 (2) No

H. If "yes" please check each type of program you now operate on a formal basis. 97

47 (1) Apprenticeship
46 (2) Supervisory training
15 (3) Technician training
8 (4) Plant management
17 (5) Job upgrading
14 (6) Executive development

Other (write in below)

21 (7) _____
_____ (8) _____
_____ (9) _____

I. General comments: (Add any comments which you, or other officials of your firm, may wish to make about the improvement of education and training opportunities in the Ottawa County area. Include in your suggestions the kind and level of educational programs which should be provided.)

_____

_____

_____

Please return this questionnaire at once in the envelope provided.

Thank you for your interest and cooperation.

Ottawa Area Vocational - Technical Committee

CHAPTER V

Agriculture Report

The information gathered by the agriculture committee was obtained by administering two separate surveys. One survey was directed to those people engaged in farming to determine farm labor needs. The other survey was given to agriculture related businesses.

Presently there are four high schools in the study area that offer vocational agriculture. They are Coopersville, Hamilton, West Ottawa, and Zeeland.

Purpose of the Committee

1. Collect and analyze Survey of Farm Labor Needs.

2. Interpret Facility-Curriculum data pertaining to agriculture in each high school.

3. Determine usage of existing facilities in each school and the availability of programs to all students.

4. Check the curriculum offerings in each school.

5. Examine what additions, deletions, or changes should be made in the agricultural offerings for students in each school as a result of:

    a. changes in agriculture-business-distribution.

    b. methods of scientific farming.

    c. changes to specialized farming.

Procedure for the Study

Prior to the formation of the Area Study, a committee was organized for the purpose of correlating the Zeeland, West Ottawa, and Holland Vocational Agriculture Curriculums to offer specialized courses on an area basis. As a result of this co-operative effort, several students from Holland are enrolled in vocational agriculture classes at West Ottawa High School.

The present Agriculture Committee was reorganized to serve as a sub-committee for the total Ottawa Area Vocational-Technical Education Study Committee. A series of meetings were held to discuss the facilities, course offerings and course outlines presently used in the county and to evaluate the programs. The committee concluded that the curriculum could be strengthened by placing more emphasis on related opportunities and basic scientific principles pertaining to agriculture, and less emphasis on general farming.

The Coordinators were assigned the task of preparing a course of study outline for the first two years of Vocational Agriculture. On an experimental basis, West Ottawa and Zeeland are presently following this course of study.

Project 80, a research project conducted by Michigan State University, predicts what life in Michigan will be like in 1980. The following statements from this report have implications for developing future agriculture programs.

1. The population of the United States and Michigan will increase about 30 per cent in the next 15 years. The composition of the population will change as a larger proportion of the 1980 population will be in the suburbs.

2. Food processing will become much more prominent with increased emphasis on convenience, quality control and cost reduction.

3. Farm prices (in 1959-63 dollars) are expected to be somewhat lower in 1980 than in 1959-63 on crops, but somewhat higher on livestock.

4. Cropland harvested in Michigan will drop at least 5 per cent in the next five years; and if recent information on urbanization is correct, this decline could be as much as 20 per cent.

5. The production of nearly every major livestock and crop enterprise is expected to expand in Michigan by 1980. Most optimistic is the projection that beef cows will triple and that cattle feeding will more than double. Turkeys, soybeans, dry beans, potatoes, corn, fruits, and vegetables also look particularly promising.

6. Only 1 out of 100 laying flocks on farms in 1959 will be producing in 1980, with about 25,000 layers per flock.

7. The brightest spot in forest products is pulpwood, projected to increase 171 per cent from 1962 to 1980. Veneer log and Christmas tree are to double.

8. Demands for recreational lands will be strong, with the greatest increase in Southern Michigan where lands receiving significant recreational use may well increase four to five times the 1964 acreage.

9. By 1980, only about one half of the farms in existence in 1959 will be operating. The decline will occur in farms grossing less than $10,000. Farms grossing more than $20,000 will double. Part-time and part-retirement farms will also decline but will continue to represent about 42 per cent of the total. The number of all types of farms will be declining, with livestock farms (other than dairy and poultry), cashgrain farms and fruit farms decline the least. There will be a tendency to more specialization.

10. The average size of a farm will increase with acreage up nearly 50 per cent; investment, marketings and production expenses up 1½ times. On strictly "commercial" farms, the changes will be even more striking.

11. Total imput requirements in agriculture will increase. Total land in farms may drop as much as 20 to 30 per cent, but investment in land will increase in the aggregate as land values per acre rise about 3 per cent per year. The labor imput will decline about 50 per cent in physical terms, but will be offset by rising wages. Fertilizer used will double or triple. Capacity of feed manufacturing will double. Michigan farmers may buy fewer tractors but will spend more in total -- on tractors over 50 horsepower and also garden tractors. More tractors will be diesels. Farmers will buy more self-propelled implements and mechanical harvesting equipment for fruit and vegetables.

12. Because of fewer farms, net income per farm will increase to about $3,570, up 54 per cent over the 1959-63 average. On commercial farms, "realized" net farm income is projected to $5,469, up 85 per cent over 1959-63.

13. Only one out of every 5 herds in 1959 will be left in 1980. Herds over 50 cows will expand, however.

Agri-business Firms -- Dr. Robert Kramer, Director of the Agricultural Marketing and Utilization Center of the College of Agriculture, Michigan State University, gleaned from Project 80 papers the following changes in businesses related to agriculture for the next 15 years.

1. Fewer and larger business firms -- each with more volume. The fewer firms are expected to have an increasing power as buyers of farm products.

2. Plans to meet consumer demands -- Michigan farmers are expected to form more storage, grading, packing and sales organizations to supply the volume and quality needed.

3. More direct marketing and a changing market structure. Terminal or central and local markets will continue to decline in importance.

4. More bargaining by more producers -- Bargaining has been used by some Michigan farmers for 50 years.

5. More automation and the adoption of new processing and marketing technologies. Output per man hour will increase significantly.

6. More rigid quality control standards. Large, uniform lots of some specified quality and some assurance of regular delivery will be expected.

7. Integration and coordination of marketing, processing, and distribution functions. More contracts will be used.

8. An attempt by processors and other businesses to operate on a year-round basis with an even or a more level production schedule.

9. A faster turnover with probably lower margins per unit.

The following statements are taken from a recent publication from Massey Ferguson Inc. entitled "Farming for the Future": "Today's successful farmer must have more than the mere desire for farming. It requires the same intelligence, discipline, and dedication required of any other career or profession. The farmer of the future will need to be trained in soil care, crop growth, farm chemicals, farm machinery; modern business management, investments, and how to produce crops and animals at the lowest possible price."

There will be many opportunities in planning, engineering, manufacturing and servicing of farm equipment. Handling and processing of farm products will require many persons also. Other job openings will be in educational and advising services to farmers, technical services such as veterinarians, soil conservation technicians, foresters, and farm record analysis experts.

Education provides the key for all these job. Modern agriculture requires the student to have scientific training associated with plants, animals, and soils. Principles of breeding, feeding, disease and insect control must be understood. Training should cover technological phases as selection, operation, care and maintenance of farm machinery and needed mechanical skills.

Progress is being made to provide this instruction in vocational agriculture in the local high schools and also beyond high school. Some is done in area schools or in junior or community colleges. Several states now offer highly technical training in specific agricultural subjects. Michigan State University now offers several advanced courses of a technical nature. They offer an opportunity for the high school graduate who has no college or farming plans to learn specialized skills leading to employment in an agricultural occupation.

The following information is taken from "Do you know Ottawa County?" booklet published by Ottawa County Cooperative Extension Service, Michigan State University. Statistics, based on the 1960 census report, show the following:

1. 2,636 farms.
2. 65 farms classed as field crop farms.
3. 105 vegetable farms.
4. 170 fruit farms.
5. 238 poultry farms.

6. 670 dairy farms.
7. 160 livestock farms.
8. 1,228 miscellaneous and general farms.

The value of all farm products sold was $29,137,501. There are 2,390 people employed in the Agricultural Industry in Ottawa County. This is a 30 per cent decrease from 3,421 in 1950.

Farmers and farm managers represent 4 per cent of the labor force in the county as compared to 2 per cent on a Michigan basis.

Farm laborers represent 2 per cent of the labor force in the county as compared to 1 per cent in the state.

General Summary (Compiled from the Survey of Farm Labor Needs)

A total of 173 farmers were surveyed, (most of them by the personal interview method) which represents about six per cent of all part-time and full-time farmers within the study area.

1. Approximately 20 per cent of the farmers indicated they would hire additional help if available.

2. Seventeen per cent of the farms contained about 160 acres; 50 per cent between 40 and 120 acres.

3. Thirty per cent of the farmers surveyed indicated they would be interested in enrolling in adult education classes.

4. Eleven per cent of the farmers were under 35 years of age, and 19 per cent were over 55 years old.

5. The survey identified the following areas of training necessary to qualify individuals for future jobs on the farm:

    a. machinery & mechanics.
    b. welding.
    c. soils and crops.
    d. animals.
    e. bookkeeping and farm management.
    f. conservation and forestry.

General Summary of Survey of Agriculture Related Businesses

Twenty agriculturally related businesses were surveyed.

1. Twenty-three per cent of all employees working in agriculture related businesses are part-time farmers.

2. Agriculture related businesses indicated that 52 per cent of their employees would benefit from a background or training in agriculture.

3. These businesses would like to hire employees who are trained in the following areas:

    a. plant science.
    b. animal science.
    c. agricultural business management and marketing.
    d. agricultural mechanization.

Conclusion and Recommendations

With the present emphasis being placed in agriculture related occupations, there is a need for curriculum change. There should be an opportunity for all students who have an interest in agriculture to receive instruction in this field even though their school does not presently offer this program. This instruction may be provided in cooperation with other schools or in an area vocational-technical center.

OTTAWA AREA VOCATIONAL - TECHNICAL EDUCATION STUDY

SURVEY OF FARM LABOR NEEDS

173 Respondents

1. Size of farm:

Acres	Per Cent
1 - 40	18
41 - 80	28
81 - 120	27
121 - 160	9
161 - up	17

2. Kind of farming done:

Crop	Per Cent	Livestock	Per Cent
Corn	75	Dairy	39
Oats	47	Beef	24
Wheat	58	Swine	23
Hay	75	Poultry	28

3. Do you work full-time on your farm?

Yes 49 per cent Part-time 51 per cent

4. Would you hire additional help if available and dependable?

Yes 22 per cent

5. Farm operator by age:

	Per Cent
a. Under 25	7
b. 26 - 35	4
c. 36 - 44	34
d. 45 - 54	36
e. 55 - 64	13
f. Over 65	6

*6. What types of adult agricultural education could the high school offer that could be of benefit to you?

*7. What subject knowledge or skills would be of benefit to your employees?

*8. What do you think should be taught in high school agriculture?

*9. What training should boys have for future jobs on the farm?

*Due to the similarity of these questions, the most frequent answers given were:

		Per Cent
a.	animal husbandry	14
b.	crops & chemicals	20
c.	machinery & mechanics	23
d.	management & bookkeeping	19
e.	soils & fertilizers	30

AGRICULTURAL OCCUPATIONS SURVEY

20 Respondents

1. How many part-time farmers are employed? 23 per cent

2. How many people in your plant have jobs or positions which would benefit from a background or training in agriculture?

   52 per cent

3. How would you designate your job classifications?

		Per Cent	
a.	laborer	30	
b.	seasonal laborer	37	
c.	semi-skilled or skilled craftsman	17	
d.	supervisory, junior supervisory and sales managerial	16	
e.	season junior supervisory	25	(Total seasonal labor)

4. 52 per cent a. Permit students to visit plant to observe operations.
   43 per cent b. Employ interested students on a part-time basis during school year.
   43 per cent c. Employ interested students during vacation period.
   38 per cent d. Work with school personnel in outlining the type of program which would help prepare students for work in agricultural industries.
   31 per cent e. Cooperate with school for classes in in-service training for present employees.

5. Which of the following areas of training should the schools teach to prepare a boy for your business?

   The most frequent answers given were:

   a. plant science.
   b. animal science.
   c. agricultural business management and marketing.
   d. agricultural mechanization.

CHAPTER VI

Business and Distribution

Business education in the secondary school includes general business, office, and distributive education.

General business deals with the free enterprise system: how the American economic system operates and how business satisfies our economic needs and wants. This class is primarily general education in nature, but it is essential that students have an understanding of every day business functions and practices. The students enrolled in this course are taught how to live in the business society so they can manage their earnings competently and successfully deal with the economic problems that will confront them in life. Most of the schools in the study area offer a course in general business.

Distributive education pertains to those areas of wholesaling, retailing, and service industries. The flow of goods or services from the producer to the ultimate consumer is known as distribution. This program teaches the student the importance of distribution and its function in our free enterprise system. The distributive education classes prepare the student for initial employment in the retail, wholesale, or service industries. To gain experience under actual employment conditions, a junior or senior student may elect cooperative training. Presently, four high schools in the study area offer courses in distribution.

Office education teaches those basic skills and knowledge that will be useful to students for their own personal use. Its chief function, however, is to equip students with the necessary skills for entry occupations in office work and other related business occupations. Students may supplement their learning by working on the Cooperative Training Program. All schools offer some classes in office education.

Purpose of the Committee

1. To collect and analyze facility-curriculum data pertaining to business education in each high school.

2. To determine usage of existing facilities in each high school and the availability of programs to all students.

3. To determine curriculum offerings in each school.

4. To recommend additions, deletions, or changes that should be made in the business and distribution offerings for students in each school.

5. To consider changes in merchandising techniques, automation, and business trends.

Procedure for the Study

Findings were based largely upon the results of the following survey instruments:

1. Parent Opinionnaire.

2. 1965 Senior Class Survey.

3. Survey of 1959 Graduating Class.

4. Survey of 1962 Graduating Class.

5. Business, Industry, and Agriculture Survey.

In addition, each school in the area submitted charts showing curriculum offerings, equipment, and facilities available and utilization of the available space. Following is a list of course offerings and enrollments for the 1964-65 school year:

School	Area	9	10	11	12	Total Enrolled
HAMILTON	BUSINESS					
	1. Beginning Typing		x	x	x	26
	2. Intermediate Typing		x	x	x	41
	3. Advanced Typing			x	x	23
	4. Shorthand I			x	x	9

3.	Voc. Typing I - II		x			61
4.	Stenography I - II			x		29
5.	Office Practice				x	20
6.	Stenography III - IV				x	9
7.	Typing III - IV			x		35
8.	Bookkeeping			x		98
9.	Business English				x	19
10.	Business Law				x	87

Conclusion and Recommendations

The committee feels there is need to upgrade the status of the business curriculum. One method of upgrading would be to provide more descriptive titles to course offerings. For example:

1. business preparatory course instead of commerical course.
2. basic accounting instead of bookkeeping.
3. business communication instead of business english.
4. salesmanship instead of retail selling.

All teachers should be vocationally oriented to their particular subject so that they can make students aware of the various fields of work and career opportunities for which their subject helps prepare the student. Counselors should be aware of fields of vocational opportunities in their particular community and service area.

The Business Education department is adequately providing the basic skills and knowledge necessary for students to qualify for entry occupations in office occupations. Due to automation and technological change, it is not financially practical for a school district to provide automated equipment needed for specialized training in the fields of business and distribution. For example, a computerized tape cash register in a modern department store would cost approximately $4,000 to $5,000 each. A Vocational-Technical Center could best meet the needs for this type of program.

It is the opinion of the committee that the following business education courses should be available to all students, either in their local high school or area facility:

1. typing.
2. shorthand.
3. business machines (office practice).
4. salesmanship, merchandising, and buying.
5. business management.
6. basic accounting.
7. business procedures (office procedures).
8. business law.
9. business communication.
10. business arithmetic.
11. data processing.

It would not be practical to offer this complete program in a school with limited enrollment or facilities. This should not lessen our responsibility to provide these courses to all students who wish to take them. In some instances this may be done on a cooperative basis by sharing facilities, and/or sending them to an area facility.

In the event that a junior college or post high school vocational-technical center is organized, a committee should study the type of specialized technical training to be offered.

It is the feeling of this committee that there are at least three categories of people whose needs are not now adequately met:

1. High school graduates who want beginning or advanced training in business field.

2. The high school drop-out who wishes to complete his high school education in the business field.

3. The adult who wants to supplement (or refresh) his education in the business fields.

CHAPTER VII

Home Economics and Food Service

At the present time, all schools in the study area offer home economics classes. Due to the increased emphasis in the food service area, it was included in the home economics report.

Because of the changing role of future housewives and mothers, the home economics curriculum should be re-evaluated to better prepare students for their places in society. Also, more experiences should be provided for girls that will prepare them for entry occupations in business and industry.

Purpose of the Committee

1. Collect and analyze facility and curriculum data pertaining to home economics and food service in each of the high schools in this area.

2. Determine usage of existing facilities in each school and the availability of programs to all students.

3. Determine if there is a need for a vocational program in this area.

Procedure for the Study

The committee studied the problem by making visits to each of the schools to inspect the home economics facilities and equipment.

The survey of equipment was to establish the possibilities of developing a more comprehensive vocational training program within the field of home economics: a program which could better prepare the student seeking employment after high school graduation, the student needing part-time work while in school, and the "drop-out".

It was found that the curriculum varied slightly in each individual school visited, and very little vocational training is being offered to the high school student enrolled in home economics. The facilities and equipment in all but one school were found to be functional and could be adapted to meet the needs of a vocational training program.

The committee found, the equipment was excellent in most of the home economics departments. However, some of these departments were not constructed in a manner that is conducive for offering food and clothing classes simultaneously. In some instances, lack of personnel prevents full-utilization of the facilities.

The committee feels that facilities and equipment now in use teaches the basic information necessary for the home economics student. If an area vocational school were realized it could be equipped to meet the needs of the girl wishing to specialize within the field of home economics and food service.

The committee made use of all the surveys that have been previously mentioned in this report. The home economics curriculum is similar in all high schools in the study area.

Resource people used in conjunction with the report are:

1. Mrs. Francis Sanderson - Wayne State University, Detroit.

2. Mr. K. Bandstra - owner of Beacon Drive Inn, Grand Haven.

3. Mr. R. Den Uyl - Manager of Point West, Holland.

4. Mrs. Jean McOmber - Home Economics teacher, Spring Lake.

Conclusion and Recommendations

The committee feels that it is our area responsibility to train more girls with a saleable skill. Because of the possibility that more girls will work after leaving school, it is important that we provide opportunity for her to train herself in such a skill.

In a report recently compiled by Mrs. Jean McOmber, we learned that the trends in society point definitely to a need for more vocational training. The following is an excerpt from the report which points to the necessity of re-evaluating the home economics curriculum:

1. Increased Automation--It is estimated that more than two million jobs will be vacated over the next decade in the United States as a result of technological advance and improved productivity.

2. Continuing Education--The Department of Labor predicts that today's youth will change occupations five times during the 40 years he is in the labor market. A life of continuing occupational adjustment will mean a life of continuing education.

3. Specialization--There is little room in the labor market for the undereducated, unskilled young worker. Unskilled jobs today account for only five per cent of all United States employment.

4. American Labor Force--Presently, some 25 million, more than one-third of all women over 14 years of age are employed. Three million women will be entering or re-entering the labor force.

5. School Drop-outs--A high proportion of unmotivated young people drop out of school and there is strong evidence that they are much more likely to stay in school when the school offers a program to prepare them for wage earning.

6. Unemployment Rate--If our current rate of youth unemployment persists, as the youth population increases, by 1970 the number will be close to one and one-half million.

7. More Service Occupations--There has been an increase in service occupations, both in private households and outside the home. Many of these service occupations have a relationship to home economics. One of eight workers is in a service occupations.

Following is a list of the types of job training activities that could be taught in the Home Economics department of an area vocational-technical school:

1. child care services.
2. food service worker.
3. hotel & motel aides.
4. nursing & health occupations.
5. clothing & maintenance specialists.
6. government work (county home extension & home demonstration).
7. related arts (interior decorating, design, etc.).

It is apparent that none of the high schools in the Ottawa Area is of sufficient enrollment to warrant offering these courses in their own schools. (They also do not have adequate facilities.)

In cooperation with an area vocational-technical center, these courses could be offered not only to students of high school age but also to the adults of the communities involved.

The committee feels that home economics has not been given enough publicity. A lack of communication leaves much to be understood about the broad area covered in the home economics curriculum of today.

A county vocational-technical school could be utilized for high school training, for drop-outs, for retraining, and refresher courses on the adult education level. The main objective for the high school student is to train them with a saleable skill.

We believe our concern for home economics education can be best stated from the following quotation taken from Mrs. McOmber's report. "For many years, we have given most of our time and attention to the preparation for the role of homemaker, now our concern for preparing young women for the wage-earning program should share equally with our concern for the former. The success of the wage-earning program will depend upon the degree of separation from the present home economics program. It is true that all communities need programs for instruction in homemaking, but programs for employment will be provided only when there is established evidence of job opportunity. When we develop cooperation between preparation of youth for employment and the employment opportunities, we will be helping more youth to leave school with the training most suited to their interests and needs."

*HOME ECONOMICS PROGRAMS IN MICHIGAN

PRE-VOCATIONAL

Home Economics Grade 7

Home Economics Grade 8

VOCATIONAL

Preparation for Homemaking - Grades 9-12

Basic Program - Home Economics I and II
- Family Foods and Nutrition
- Family Clothing and Textiles
- Child Development
- Family Relations
- Home Management
- Housing, Furnishings and Equipment
- Family Health and Safety

Special Interest Courses Grades 11-12
- Child Development
- Family Finance
- Housing and Furnishings
- Nutrition and Meal Management
- Textiles and Clothing
- Home and Family Living

Adult Education
- Adult classes may be offered for upgrading the preparation for homemaking

Preparation for Employment

Pre-employment - Grades 9-10
- Becoming employable
- Job attitudes
- Grooming for the job
- Relationships on the job
- Interviewing
- Job Sampling
- Homemaking I and/or II

Training for Wage Earning - Grades 11-12
(Some suggested occupations)
- Child Day Care Aide
- Homemaker's Assistant
- Companion to the Elderly
- Supervised Food Service Worker
- Hotel-Motel Aides
- Visiting Homemakers
- Clothing Maintenance Specialist
- Home Management Aide

Adult Education
- Adult classes may be offered for preparatory initial training, or supplementary upgrading for employment

Community College
(Vocational-Technical Programs)
- Child Day Care Assistant
- Food Service Supervisor
- Dietitian's Aide

*State of Michigan

Division of Vocational Ed.

CHAPTER VIII

Industrial Education

The Industrial Education Committee studied the present programs of industrial arts, vocational-industrial, and industrial-technical education to determine those programs that should continue as they are presently being offered, those which need strengthening, and the occupational areas which could best be offered in a separate specialized facility.

Purpose of the Committee

1. Study the Industrial Education curriculum in each school participating in the survey.

2. Study the available facilities and equipment in each school participating in the survey.

3. Determine what revisions should be made in industrial offerings for students in the schools.

4. Determine if there is a need for a vocational-technical center (s) to provide training at an advanced level.

5. Determine what provision should be made for training or retraining of employed persons or those who seek training for full-time employment.

Procedure for the Study

To study and analyze the programs in the different schools, the committee used the Curriculum-Facility Survey and also toured the schools involved. Teachers and administrators were interviewed in the various schools to gain an understanding of the type of programs that were being conducted.

The Business-Industry-Agriculture Survey, Senior Class Survey, Follow-Up Survey, and Parent Opinionnaire were reviewed. By studying these instruments an attempt was made to determine and correlate the technical needs of the businesses and industries of the area; to determine the strengths and weaknesses of the available educational programs to meet these needs; and to suggest revisions that would be beneficial to a total program of education.

Facilities and Curriculum

The first step was to analyze the current course offerings, the physical facilities, and the present availability of programs to all students; the Curriculum-Facility Survey was used to collect this information.

The Industrial Committee arranged to tour all of the facilities for industrial education in the nine high schools represented in the Ottawa Area Vocational-Technical Education Study.

It was interesting to note that the buildings housing the industrial education departments were relatively new. In some instances the equipment had been installed recently, and in those instances where the equipment was of an older vintage, the buildings were new.

The Scope of Industrial Education

The term "industrial education" is used in this report to include the program areas of (1) industrial arts education, (2) vocational-industrial education, and (3) industrial-technical education. All of these programs are concerned with the industrial phases of work and society, and while the emphasis and major purpose of each is different, they are not mutually exclusive, but rather should be considered as complementary to each other.

Since the terms (1) industrial arts, (2) vocational-industrial, and (3) industrial-technical education are often misunderstood, the following definitions will be used throughout this report:

1. Industrial Arts is a study of industry, its materials, processes, products and organization through laboratory experiences with tools and materials that provide students with an understanding and appreciation of industry, its development and contributions to our industrial way of life and the inherent social and technological problems. Industrial arts programs are operated primarily at the junior and senior high school levels.

2. Vocation-Industrial Education is described as a program to prepare workers for entrance into employment or to up-grade employed workers in various occupations in the fields of industry. It is designed to develop skills, abilities, understandings, attitudes, work habits and appreciations, encompassing knowledge and information needed by workers to enter and make progress in employment on a useful and productive basis.

3. Industrial-Technical Education is intended to prepare students to enter and succeed in an occupation in which success is dependent largely upon technical information and an understanding of the laws of science and technology as applied to modern design, production, distribution, and service.

Basic Characteristics of a Good Program of Industrial Education

A quality program of industrial education commences with a comprehensive industrial arts program at the junior high school level that provides experience in as many areas of industrial arts as possible. One semester or year of industrial arts at either the 7th, 8th, or 9th grade should be required of all students, both girls and boys, with additional courses available on an elective basis. Programs should emphasize exploration of many material areas, application of concepts from other classes, development of the students' concept of their own abilities and limitations and interpreting industry--its organization, problems and contribution to American society.

At the high school level, industrial arts programs should be available to all students on an elective basis. Emphasis should be placed on metals processing and fabrication, electricity-electronics, power mechanics, drafting-design and illustration, graphic arts, materials testing, research and experimentation, and product servicing.

Specific programs of Vocational-Industrial Education should be available to all students who desire such preparation at least at the 11th and 12th grade levels, and a broad range of different program offerings should be available. Programs of Vocational-Industrial Education at the high school level should provide for supervised practical on-the-job experience that can be arranged through cooperative education programs.

Vocational-Technical Education should be provided in an area Vocational-Technical school or post secondary school. This should be offered at no cost to the student. Post secondary programs could be operated as vocational-technical institutes, operated independently or as part of a community college.

Post high school programs and courses of vocational-technical education should also be available for adults for retraining, promotion and upgrading, and general interest purposes.

In general, a quality program of Industrial Education should assist in providing for the maximum development of each student's talents and abilities to the fullest, regardless of difference in talents and abilities between individual students.

Suggested Curriculum Organization

The following graphic material is presented to suggest courses, sequence, grade placement and relationship of subjects in an industrial education curriculum. The arrows indicate patterns of movement of the student through the program. It is understood that any individual student may take more than one curricular area and, in most cases, more than one subject in an area.

INDUSTRIAL EDUCATION CURRICULUM FOR JUNIOR AND SENIOR HIGH SCHOOL

Findings

An analysis of the findings of the committee would reveal that:

1. All the schools provided instruction in woodworking and drafting. One school offered a class in vocational carpentry.

2. Five of the schools had programs in metalworking. One school offered a vocational machine shop.

3. Power mechanics or auto mechanics was included in only four school systems. One school will offer a vocational auto mechanics program during the 1965-66 school year.

4. Printing was included in only two schools, with limited enrollments in each program.

5. Electricity was not currently being offered in the industrial education departments. Two schools plan to offer courses in electricity during the 1965-66 school year.

6. Shops and laboratories are being utilized, on an average, only about 60 per cent of the time during the school day.

Recommendations

It is recommended that:

1. The secondary schools strengthen their industrial arts programs and offer exploratory training in a wide range of industrial areas.

2. Certain selected secondary schools should provide additional vocational-technical courses in their existing schools.

3. Every student should have cooperative occupational education programs available to him and participate in them if he so desires.

4. Vocational-Technical center (s) should be constructed in the Ottawa study area to provide:

   a. Intensive occupational education on an all-day basis for high school graduates or drop-outs without occupational preparation.

   b. Quality occupational preparation on a shared-time basis for those still in high school.

   c. Re-training.

   d. Supplementary training part-time for employed persons who need updating or desire advancement.

CHAPTER IX

Legislation and Finance Committee

This committee was charged with the responsibility of studying permissive legislation as it pertains to the financing and development of area facilities on a cooperative basis.

The committee was asked to suggest ways and means of financing the expansion of existing facilities; establishment of area vocational-technical school; junior college; or any combination of the above.

Purpose of the Committee

Study permissive state and federal legislation and methods of financing an area vocational-technical school. The following are summaries of permissive legislation that pertain to this study:

Michigan Act, #35, 1951--This act is a summation of the Attorney General's opinion concerning the legality of two or more school districts to establish and operate a vocational-technical high school. Vocational-technical high school being construed as a school established for training in vocational subjects or practical arts.

The Attorney General ruled on April 7, 1959, that: under Michigan Act, #35, 1951, and Michigan Act, #269, 1955, Sections 583 and 585, two or more school districts have full authority to establish and operate technical high schools.

Public Law (Federal) 88-210, Part A--The importance of this Act to our study area permits monies be provided by the state through the Federal Government for construction of facilities for the purpose of vocational training and retraining for anyone who desires and needs this type of education. Under this Act, the Federal Government authorized $177,500,000 for 1966, and $225,000,000 for each fiscal year thereafter.

It is important to note that prior to July 1, 1969, one-third of a state's allotment must be used either for construction of vocational facilities, or for a vocational education program

for persons who have completed high school (or both). Thereafter, only 25 per cent shall be used for these purposes. The Federal Government will not pay for more than half of the cost of each vocational-technical education school facility.

Amendment to Michigan Act. #190, 1962--This bill amends Act 190 to provide area vocational-technical education programs on the same basis as special education programs. The bill also provides a means for K - 12 school districts to raise additional millage to operate vocational education programs on an area basis with the intermediate school district as the taxing unit.

The intermediate district may levy millage, by referendum, on charter basis to finance the program, but does not actually operate the program. If they raised the millage they may contract with the K - 12 district to operate the program on a long term basis (not less than 15 years) and pay the total cost less any money received by the operating unit from Federal, State Vocational Education reimbursement. The K - 12 district would hold title to the capital outlay and be the controlling unit. The K - 12 districts who contract the programs must serve the intermediate district area as designated and approved by the State Board of Education. Students from other districts in the area survey would attend Area Vocational center on a non-tution basis.

Amendments to Michigan Act, #188, 1955: This Act was amended by House Bill #807 to provide the following:

1. Clarification of the role of community college in the provision of area vocational-technical education programs for persons who have graduated from high school or who are beyond high school age and for persons enrolled in high school but who need the advantages of a vocational program provided on an area basis. In addition this would permit community colleges to provide vocational programs for high school students as requested by superintendents of K - 12 districts.

   It would also permit the organization of a community college district under the provisions of Act 188 for the exclusive purpose of providing an area vocational-technical education program.

2. Permission for the Board of Trustees of the community college to expend monies for buildings and operation for community college programs both in and outside the district and, in addition, permission for community college districts to borrow money for periods up to 30 years.

3. Identification of community college districts in accordance with the new constitution as a charter unit of government with certain limited privileges and also clarification of the procedures for boards of canvassers under the various alternatives for organizing community college districts.

School enrollments for the school year of 1964-65 and state equalized evaluation for the Ottawa Study Area, K - 12, is as follows:

Conclusion

Upon completion of this study the committee felt it would be more economical to operate one good vocational-technical school rather than attempt to expand the present facilities in each school district. The committee also agreed it would be more advantageous for the student to have a greater selection of courses that an area school would provide.

The committee believes the Ottawa Area has the potential valuation and school enrollment to establish and operate an area vocational and technical school.

They also believe the best method to finance such a school would be through a special millage levied on a county basis. Areas outside the Ottawa Intermediate School District to participate in this program should do one of the following:

1. Consolidate with the intermediate school district.

2. Vote a similar millage.

3. Attend on a tuition basis.

CHAPTER X

Special Education

The Special Education Committee was asked to provide information regarding the number of physically handicapped students presently attending our schools, the types of occupational training programs now available for these people on a state or local level, and the employment opportunities present in the Ottawa study area.

Mr. Ken Heuvelman, Coordinator of Special Education for Ottawa Intermediate School District, provided the information contained in the following Special Education report:

1. How many physical handicaps do we have in our schools?

   The following list of physically handicapping conditions and number of children afflicted was obtained from a survey of the physically handicapped (birth through age 25) completed during the 1964-65 school year by the Special Education Division, Ottawa Area Intermediate School District:

   a. 15 - blind and partially seeing.
   b. 69 - hearing handicapped.
   c. 35 - cerebral palsy.
   d. 16 - cardiac.
   e. 96 - orthopedically handicapped.
   f. 48 - mentally retarded with physical handicap.
   g. 16 - other physical handicaps.
   h. 1,000- speech defects (estimated).
   (The State of Michigan recognizes children with speech defects as being physically handicapped.)

2. What types of occupational training programs do we have for these people?

   Other than adaptations made within the existing school programs for non-handicapped children, there are none.

3. What facilities and training are available on a state level or local level (a) while in school, (b) post-high school?

The State provides additional state-aid money for operating special approved programs in public schools for all of the types of handicapping conditions listed above. Children qualify for programming from birth through age 25. The State programs include the following:

a. deaf and hard of hearing.
b. blind and partially seeing.
c. crippled and otherwise physically handicapped.
d. homebound and hospitalized.
e. speech correction.
f. teacher-counselor for physically handicapped.

The State of Michigan also maintains a school for the blind at Lansing and a school for the deaf at Flint. It is recommended that any child within the Ottawa study area who qualifies should attend the appropriate State School, to maintain a program of uniform quality.

Post-high school training can be obtained through Vocational Rehabilitation for Physically Handicapped Children.

4. What are employment opportunities for handicapped persons in the Ottawa study area?

These persons must compete on the open labor market. With one exception, there is job training and placement that takes place within secondary special education programs.

The Ottawa study area is in need of a sheltered workshop to provide work experience for those who are potentially employable and work for those who are not employable.

During the 1965-66 school year, the following programs will be operated in the area for physically handicapped children:

a. 1 - teacher - counselor for the physically handicapped.
b. 2 - orthopedic or otherwise physically handicapped.
c. 9 - speech correction.
d. 1 - homebound - hospitalized.

CHAPTER XI

Cooperative Training

Cooperative training has as its primary purpose the training of in-school youth for basic competency in specific occupations which fit their abilities, aptitudes, and interests. It is an integral part of the regular instructional program which more effectively enables them to bridge the gap between school and full-time employment. Through enrollment in a cooperative training program, a boy or girl is able to continue in high school, while at the same time receiving training and supervised work experience under actual paid employment conditions.

A trainee enrolled in a cooperative program divides his time between school and a part-time job, spending approximately half his time in each. His in-school schedule includes a balanced combination of subjects required for graduation and subjects directly related to his job activities. His job time is devoted to performing tasks normally assigned to new workers in the occupation. The trainees job activities are organized in advanced, and his performance and progress on the job are supervised by the employer in cooperation with the school coordinator.

Cooperative training correlates work experience and school instruction, and thus makes the greatest possible use of the school and the community in the development of a sound education program.

In the fall of 1962 West Ottawa joined forces with Holland to expand the cooperative training program. Zeeland was added to the program starting in the fall of 1965. To simplify the operation of the program, Holland has been selected to assume the responsibility of staffing and directing the program. In addition to the Holland Area Cooperative Training Program, Grand Haven operates a cooperative training program in its high school.

There are three basic fields in which cooperative training students are placed: trade and industry, office, and distributive education. The occupations or trades which are recognized as belonging in the field of industry are included in these training courses. Cooperative industrial occupations training is a program in which the schools utilize the facilities of

industrial plants which serve as training shops and laboratories. The cooperative office program prepares students for careers in office occupations. The distributive education cooperative training program prepares youth for initial employment in retail businesses, wholesale establishments, and service industries.

CHAPTER XII

Summary -- Findings and Recommendations

Summary

The Ottawa Area Vocational-Technical Study was made to determine the type of vocational-technical training programs needed to provide a complete educational program for all people in the study area.

The findings and recommendations represent the efforts and cooperation of many citizens.

Findings

1. In 1955 there were 117 school districts in Ottawa County. Through reorganization this number had decreased to 24 school districts by September of 1965. This number will likely be reduced still further in the year ahead as all districts must become a part of a K - 12 district.

   The reorganization plans for school districts, however, should have no effect on the need nor time of implementing the recommendations for an area vocational-technical facility.

2. The population of the study area, as a whole is one of normal growth compared to the State and Nation.

   The concentration of population is located in the extremities of the county.

3. It has been indicated that the present practical arts facilities are not being used to the maximum of their capacity. The scope and content of offerings are limited in school.

4. The greatest unemployment for Ottawa County according to MESC figures are females in the 18-19 age category. (See Table 4.)

5. According to figures released by Grand Rapids Junior College and Muskegon Community College, there were 351 full-time day students enrolled from Ottawa County in the fall of 1965. These colleges have been meeting the needs of Ottawa County students desiring grades 13 and 14. As these facilities are reaching capacity, we cannot expect them to continue to serve our students if they cannot adequately meet the needs of their own community. (See chart on Junior College enrollment.)

6. There is at present little or no vocational education in the high schools of the study area.

7. In general, there is insufficient time and information provided regarding occupations and vocations in area secondary schools.

8. A majority of employers indicated a desire to see the expansion of vocational-technical education at the secondary and post-secondary levels to meet community needs in business and industry.

9. It was the consensus that the student should keep his identity with his home school for the general education programs and extra-curricular activities.

10. It was interesting to note that of the graduates responding to the survey; that 56 per cent of the 1959 graduates and 50 per cent of the 1962 graduates were working within a radius of 50 miles of the high school they attended. It was also noted that an additional 15 per cent of the 1959 and 11 per cent of the 1962 graduates were still working in Michigan.

11. Federal and State vocational funds are available to reimburse in part the cost of instruction, construction and equipment for area vocational-technical facilities.

12. Michigan Public Act, No. 246, 1964, provides that school districts may operate vocational-technical programs on an area basis with the Intermediate School District serving as the taxing and contractual unit with local school districts and/or community colleges. Where area schools are operated to provide high school level vocational training, no tuition can be charged students.

13. Michigan Public Act, No. 237, 1964, provides that community colleges may serve as area vocational-technical education units to provide both post high school education for employment and vocational education for those still in high school who need training on an area basis. The act further stipulates that community colleges, in providing such education, may expend monies for buildings and program operation both within and outside its district and may levy taxes for the purpose of providing vocational-technical education.

14. The total public and non-public school enrollment in grades 10 through 12 for the study area is 6,378 students.

    The number of students who would normally attend a vocational-technical center would fall in the range between 14 and 30 per cent of the 10th through 12th grade of the school population. Using these percentages, a potential vocational-technical enrollment of 893 students to slightly over 1,900 is indicated in addition to the post-secondary student.

15. This is not a matter of making a choice between college preparatory course and a vocational-technical program. It should be possible to qualify for college entrance and still have developed a saleable skill in one of the vocational-technical areas.

Recommendations

The Ottawa Area Vocational-Technical Study was organized to ascertain the need for expanding and improving the practical arts and vocational-technical offerings in the present secondary schools, and also to determine the existing need for one or more Vocational-Technical Centers to provide specialized types of occupational training for the secondary youth and adults in the study area.

On the basis of study findings, the following recommendations are being made by the executive committee:

1. The Practical Arts courses in the present secondary schools should expand the scope, content and offerings of the present program in general business, general agriculture, home economics and industrial arts. These exploratory courses should provide experiences to all students, boys and girls, which should serve a guidance function in determining occupational patterns in keeping with the interest, aptitude and ability of the students.

2. Local school districts should expand vocational-technical programs in certain occupational areas to provide instruction for students in their school or on a shared time basis with other public, parochial and private schools.

3. Vocational-Technical Center (s) should be constructed in the Ottawa Study Area to provide the breadth of offerings necessary in specialized preparatory, apprentice, and adult occupational areas.

4. These Vocational-Technical Center (s), when constructed, should be available to all students, whether public, parochial or private in the Ottawa Study Area.

5. The Vocational-Technical Center (s) would be financed on a county-wide millage levy in the same manner as is presently being done to meet the needs of special education in Ottawa County. One mill would provide approximately $370,000.

6. An advisory committee be formed, representing business, industry and education to determine what courses or occupational areas should be developed to serve:

   a. youth in high school who wish preparation for employment.

   b. youth who have completed or left high school but need preparation for employment.

   c. adults who have already entered the labor market and who need training or re-training to achieve stability or advancement in employment.

   d. adults who wish training for upgrading on their present jobs or for promotion.

   e. persons with academic, social-economic, or other handicaps, and who need special programs of vocational or pre-vocational education.

   This committee should also be charged with the responsibility of recommending location of vocational-technical center (s), cost, and curriculum.

7. An administrative organization should be established and a full-time director or administrator be employed at the earliest possible date to give direction to planning, construction and curricular offerings of the Vocational-Technical Center (s).

8. The local school district should provide flexibility in scheduling students' programs so that they may attend the area school.

9. Students continue to be identified with their local school for general academic programs, extra-curricular activities, and graduation.

10. With the large number of students attending community colleges and four-year institutions in the proximity of the study area, consideration should be given to a feasibility study to determine:

a. the need for a community college.

b. the possibility of school districts affiliating with established community colleges.

c. the incorporating of a community college in conjunction with the recommended Vocational-Technical Center (s).

11. Present co-operative occupational training programs should be continued and improved. To eliminate the duplication of services among the schools, these programs should be coordinated in the office of the administrator of the Vocational-Technical Center (s).

MACOMB COUNTY; MICHIGAN

This survey was made to determine the present status and future needs for occupational education opportunities for the citizens of Macomb County, Michigan. National, regional, and local studies of the economy, population, and work force were utilized in an analysis of the local employment outlook. The survey information presented in the report includes responses from 516 local business employers, opinions from 5,078 high school seniors, data from 12,403 parents of 8th grade students, and responses from 27 high school principals concerning follow-up studies of high school graduates. Recommendations included are that increased effort be made to upgrade quality and expand the types of occupational education in the secondary schools, a system of area occupational education centers be established, and an intensive study of the most appropriate means of providing occupational education be a continuing responsibility of all public education authorities in the county. Suggestions are made for program improvements at the secondary, adult, and post-secondary levels. Suggested curricula for a high school-community college sequence in various occupational programs are included. (PS)

CALENDAR FOR THE IMPLEMENTATION OF THE SURVEY RECOMMENDATIONS

YEAR	ACTIVITY
1965	Investigate the status and needs for occupational education opportunities in Macomb County. Recommend ways to coordinate, upgrade, expand articulate occupational education efforts.
1966	Enter interim agreements for sharing high school vocational programs on an area basis. Develop pre-technical programs for Community College-bound students. Secure approval for a suitable means to finance and administer the Area Occupational Education Centers from: Local School Boards State Department of Education The State Legislature Macomb County citizens Institute county-wide follow-up study of high school graduates and drop-outs as basis of program evaluation and upgrading. Coordinate adult vocational education offerings of the school districts and the Community College.
1967	Implement the Area Occupational Education Centers. Engage chief administrator and staff nucleus Lease existing buildings for operation Enter construction contracts for new sites Commence limited operation in existing schools and leased buildings.
1968	Expanded operation of programs in three Area Occupational Education Centers. Assess the implementation of the 1965 Survey and program a study of the 1970-1980 needs in occupational education programs.
1969	Program, and if necessary, commence construction of fourth and fifth Area Centers.

January 1, 1966

To all persons concerned about the role of vocational education in high schools:

It is apparent that some persons do not support vigorously vocational education as a legitimate activity of the public high school. Misunderstanding of the purposes and misinformation as to the values and achievements of occupational training are the causes of this reluctance. The Macomb Occupational Education Survey and the report of its conclusions deal with the measurement of conditions as they exist and are likely to exist in the near future. Yet, attitudes which are not vulnerable to these measurements may, in the final analysis, be more influential than the documentation of need. For this reason, and in behalf of the large proportion of Macomb County's youth whose educational needs are involved, an examination of the more common arguments against increased emphasis and support for vocational education is offered as pertinent to the consideration of the subject. No apology is made for the projected pro-vocational education views which are those of the writer and not necessarily the views of the members of the Citizens Committee.

Some Common Misconceptions Concerning Vocational Education.

I. One frequently hears that the comprehensive high school is the optimum agency for all secondary school purposes. "Comprehensiveness" is hard to define, but if the several high schools in Macomb County which offer their students significantly broader and richer programs and services are considered to be "comprehensive", then by the same definition, the majority of County high schools are something less than "comprehensive". It is also significant to note that administrators and vocational personnel of those Macomb County schools which presently are offering broader and richer vocational and specialized training have expressed their dissatisfaction with the extent and quality of their programs, when these are measured against the needs of their students.

While the comprehensive high school promotes democratization, which is a cherished American value, evidence is lacking that it offers advantages in attaining other essential educational goals. There is, however, overwhelming evidence that excellence in any endeavor is achieved through dedication and specialization. This evidence is found in the medical field, in business, athletics, the military, education, and especially in American industry which has outstripped the world because of its intensive specialization of skills and processes. The purpose of area vocational programs is to bring this dedication and specialization to the achievement of excellence. This study recommends a plan whereby the values of the comprehensive high school will be preserved, and the values of specialization will be achieved.

II. A second argument which is advanced holds that the high school vocational program is "dead end", and that the youngster enrolled in such a program is being cheated of his cultural birthright for the short-term goal of entry employability. This argument overlooks the evidence that many industrial and business leaders have "come up from the ranks", without benefit of advanced formal education, and that in the most open-ended society in the world, re-entry into the educational stream is possible at any time. Many universities no longer specify high school course requirements for entry. For many persons, this re-entry is more likely and more rewarding after they have attained maturity, saleable skills, and economic self-sufficiency. On the other hand, when vocational programs are weak and embryonic, the majority of non-college bound students terminate school without employable skills, or are compelled to seek such skills through enrollment at their own expense in other institutions. It might be asked if these persons are not being short-changed in their high school experience.

III. The numbers of high school graduates who lack employment skills is sometimes cited as proof that high school youngsters are not ready for such skills development. On the contrary, some teenagers have demonstrated the capacity to excel in art, trades, music, business, athletics, military service, writing, acting, in fact, in all areas excepting those which require a number of years of specific formal education beyond high school. These exceptional persons are a small proportion of all teen-agers, but still significant considering the lack of opportunities for teen-agers to demonstrate ability. It is not physical immaturity which inhibits the employability of high school graduates, but a rapidly changing economic and social culture which provides too few maturing experiences. It should be a fundamental purpose of public education to provide programs which supply opportunities and experiences through which youngsters can mature.

IV. A closely related belief holds that employers do not want to hire high school graduates. There is an understandable reluctance of any person to entrust his property, his health, or his business to the unskilled, the irresponsible, the immature. This reluctance would apply regardless of the age of the job-seeker. But among the essential and realizable aims of a good vocational program in the high school are the development of responsibility, proper work and safety habits, viable occupational skills, and respect for the employer, his business, and his tools.

V. Another assumption is that general education provides a better basis for future career development than does education of a specific nature such as vocational education. This is not true for all persons. One person may apply successfully the concepts of the study of physics to an understanding of the functioning of an internal combustion engine; another person might find it easier to comprehend the principles involved by the repair and adjustment of such engines. If the student's purposes include employability as a mechanic, there can be little doubt as to which learning experience holds more value. A truer reason for the emphasis upon generalized learnings in our schools may be the difficulty in securing qualified teachers who can instruct in depth in vocational and technical subject areas.

VI. Some educators profess the fear that offering occupational education programs in specialized facilities or at locations apart from the comprehensive high school implies a downgrading of the persons enrolled in such programs. This view, which is readily dispelled by asking the students themselves, overlooks recent educational developments. Area vocational programs and facilities, which have been developed to serve a population and tax base larger than the local school district are a vigorous and growing segment of education in more than half of the states. Area programs are favorably accepted by parents, students, employers, and educators. An examination of literature about area programs and schools does not disclose any movement away from the area concept and back to the individual district effort. Area vocational education is encouraged by the Vocational Education Act of 1963 and by the Michigan State Plan for Vocational Education. The absence of area occupational programs in Michigan, far from proving that such programs are inappropriate here, is the result of local district autonomy, a condition which is not the most appropriate for realistic vocational education.

SUMMARY 193

R E C O M M E N D A T I O N S

1. It is recommended that greatly increased efforts be made to upgrade the quality and expand the types of occupational education opportunities offered by Macomb County secondary schools and Macomb County Community College.

2. It is recommended that the necessity of self-fulfilling work as essential to a satisfying life experience be stressed throughout all school grades. Schools should actively cooperate with the child in identifying his own career goals and students should be encouraged, as a part of their regular school experience, to "try on" occupational roles.

3. It is recommended that the exploratory function of the junior high grades be re-identified, broadened, and emphasized. Industrial arts, homemaking, music, art, and other programs which provide opportunities for vocational and career exploration, should be widely available, imaginatively developed, and creatively taught. Opportunity should be provided for the child to discover his own interests and aptitudes through school experiences.

4. It is recommended that intensive study of the most appropriate means of providing opportunities to develop occupational and social proficiency should be a continuing responsibility of all public education authorities in Macomb County.

5. It is recommended that every student should have the benefit of interest and aptitude testing and the interpretation of the results of such tests prior to the selection of his high school program. Every student should be fully informed of the nature and purposes of the high school programs which are available to him.

6. It is recommended that efforts be made to identify each potential early school-leaver and to provide testing, remedial, and counseling services which will improve the potential school-leaver's chances for retention and success in a school program appropriate to his abilities and interests.

7. It is recommended that the senior high schools, the Community College, and the Intermediate District cooperatively institute and conduct systematic follow-up studies of early school-leavers and graduates, preferably the first and fifth year following high school graduation. The primary purpose of these follow-up studies shall be the gathering of data, evaluations, and recommendations for the improvement of education programs in the County schools.

8. It is recommended that a continuing study of high school students should be conducted to determine the quantitative and selective demand for post-high school education and the students' perceptions and recommendations for improving the quality and nature of high school experiences.

9. It is recommended that the continuing study of employment needs in the Detroit Metropolitan Area be jointly undertaken by all public agencies responsible for providing occupational education in the County. Macomb County Community College, having the capacity and resources for such research, should provide the necessary leadership.

10. It is recommended that occupational programs should be flexible and broad enough to develop competence in a broad area of skills.

11. It is recommended that occupational programs be provided for the retarded, the slow-learner, and the handicapped, so that realizable, self-satisfying goals can be determined and achieved by these persons.

12. It is recommended that special tuition-free occupational programs be developed and conducted for the out-of-school unemployed, both adolescents and adults. Such programs should be offered on local resources if state or federal programs do not meet these needs.

13. It is recommended that every high school student should be informed annually of the programs which are available to him in the Macomb County Community College, the requirements for success in these programs, and the high school program which will fit him best for entry to the Community College program of his choice.

14. It is recommended that secondary and community college occupational educators jointly develop pre-technical high school programs which will provide entry into community college occupational programs at all levels and in as many curriculum areas as can be suitably developed for employment opportunities in the local economy.

15. It is recommended that a system of Area Occupational Education Centers be established to provide adequate occupational education opportunities for public and parochial high school students in all districts of Macomb County.

16. It is recommended that the Area Occupational Education Centers should be made available for Community College programs to the extent that these can be utilized after high school students' occupational education needs have been met.

17. It is recommended that each school district make the maximum possible effort to expand and upgrade its vocational offerings for the pressing needs of their students for the period during which the Area Centers are being implemented. Informal inter-district programs should be implemented where these can be utilized advantageously.

18. It is recommended that public schools make every effort to meet the occupational education needs of students enrolled in private high schools in Macomb County.

19. It is recommended that adult vocational or continuing vocational education in Macomb County be coordinated to offer more meaningful opportunities and to eliminate destructive competition.

20. It is recommended that every high school vocational student and every community college terminal occupational program student should have a supervised work study experience as an integral part of his occupational preparation.

21. It is recommended that formal job placement services be available, preferably in his own school, to every senior high and Community College student in Macomb County. The Michigan Employment Security Commission should be solicited in advising of job opportunities. Job placement should be related to the students training and the student referred should have reasonable expectation of success in the job situation.

22. It is recommended that, excepting for adult education programs offered by the K-12 school districts, all public vocational-technical education of a post-high school level in Macomb County be provided by Macomb County Community College.

23. It is recommended that the number of occupational programs under development in Macomb County Community College should not exceed the College's capacity to do so in an orderly manner and to insure the quality of each.

24. It is recommended that the College should study the advisibility of maintaining and expanding arrangements for the use of secondary vocational-technical laboratories both in the existing high schools and in the proposed Area Occupational Education Centers for those portions of the Community College programs for which secondary facilities are adequate and available.

25. It is recommended that Macomb County Community College should undertake cooperative study and planning with other Community Colleges in the Detroit metropolitan area to coordinate calendars and schedules and to avoid duplication of technical programs wherein high instructional costs and low potential enrollments would make such duplication unwise.

26. It is recommended that an annual inventory of vocational programs, faculty, facilities, and equipment should be compiled and disseminated for all vocational education agencies in the County in order to make the maximum utilization of these. The Vocational Consultant, Intermediate District should be responsible for the preparation and administration of instruments to gather this information.

27. It is recommended that all vocational educators in Macomb County high schools and the Community College organize associations along curriculum area lines for the coordination and upgrading of occupational programs and services. Because a major responsibility of the high school should be to identify and prepare high school students for success in the Community College occupational programs, leadership in the development of these organizations should be provided by the Community College.

28. It is recommended that all occupational educators should meet at least twice annually for the purpose of promoting the educational efficiency of their efforts. For this reason, an agenda should be prepared in advance and recognized educational, industrial, or business authorities should be engaged as resource persons when appropriate for such conferences.

29. It is recommended that the Macomb County Community College offer teacher-training experiences to assist in developing and upgrading the proficiency of the County teachers in occupational instruction. The more advanced laboratories of the College should be utilized for work-shops in the emerging practices and equipment used in commerce and government. The participation and sponsorship of a state university should be secured in order that teachers may elect to participate in such upgrading for academic credit.

30. It is recommended that the commitment and involvement of employers and skilled persons be secured for the development and evaluation of occupational programs. It is advisable that a single advisory committee be formed to serve the needs in each occupational specialty for all the schools in the County.

F O R E W O R D

The accompanying report of the Macomb Occupational Education Survey attempts to determine the present status and the future need for occupational education opportunities for the citizens of Macomb County within the public high schools and the Community College. The report presents a number of recommendations, the adoption of which would, in the opinion of the Citizens Committee, narrow the gap which now exists between the occupational skills needs of our population and economy and the capacity of public education to provide training in occupational skills.

The recommendations of this report do not make reference to the traditional compartmentalized programs of vocational education which have been employed since the 1917 passage of Smith-Hughes. It is the conviction of the study staff that new and fresh approaches to occupational training are needed if educational practice is to be brought into balance with technological changes. Such new approaches clearly are intended by the terms of the Vocational Education Act of 1963, which is expected to provide significant portions of the financial support required to upgrade public school efforts in occupational education.

The report presents the survey's findings concerning occupational opportunities which are likely to exist during the coming decade, and the solicited opinions of concerned groups (students, parents, employers, counselors, administrators), as to the practicality or desirability of providing public training for particular occupations or groups of occupations. The report, however, purposely confines itself to suggestions concerning specific curriculum content and instructional methods. These matters are the heart of the required new approaches and must be determined by vocational and technical educators and persons expert and active in the occupational skills for which educational programs are being considered. Curriculum and method cannot be permitted to again atrophy as they have in the past, but must be fluid, experimental, and exploratory. It is for this reason that recommendations in these areas are generalized rather than specified. To secure this needed flexibility and responsiveness to technological changes in industry, commerce, and government which create demands for new occupational skills, a number of recommendations are offered which are designed to promote the continuation of occupational research, establish close articulation between high schools and the Community College, and coordinate program planning among all educational agencies in the County.

The Citizens Committee recommends a County-wide approach to meet the serious and rapidly growing need for expansion of occupational education opportunities in the County. The Committee examined the available statutory means for implementing area vocational-technical programs. In the opinion of the Committee, each of these available means has serious practical limitations. Consequently, the Committee has recommended a plan of organization and control not presently specified in State statutes. This will require either the approval of the Attorney General as to its legality, or more probably, action by the State Legislature to empower the Intermediate School District to delegate the control over the financing and operation of the proposed Area Occupational Education Centers to a special board

of control, and to authorize the encumbrance of a long-term millage issue for construction of area centers. Precedent for this latter course is found in the present statutes covering the financing of Michigan's community colleges.

At first inspection, the division of Macomb County's public educational effort among 21 local districts makes a coordination of effort seem unlikely. However, Macomb County educators have a long-standing record of cooperating to accomplish tasks which overmatch the resources of the individual districts. Joint study and planning, and where feasible, joint action have been undertaken to meet just such problems as we are now facing in vocational education.

POPULATION—AGES 15-19
MACOMB COUNTY, MICHIGAN

In 1975

* The 1965 high school age population will double.

* Twice as many high school classrooms will be needed.

* The need for employment skills will require new types of schools and the upgrading of existing schools.

* There will be a need for Community College facilities to serve more than 20,000 persons.

This Survey has attempted to determine the future Macomb County population in the high school and community college age group, and the geographic distribution of this population.

Data measuring the County population, its age-group composition, its rate of growth and geographic distribution, have been assembled. These data and their projections provide a basis for judgments concerning the extent of future need for occupational education programs in Macomb County, and in a generalized manner, the quantitative need for additional occupational education facilities and the most practical location for these.

A Committee for Population and Enrollments was formed from the Citizens' Advisory Committee. The Committee prepared a report which has provided guidance for the other studies undertaken in connection with this Survey. The Committee drew upon four main sources for the material of its report:

1. Macomb County Populations, 1960-1980, a study prepared by the Macomb County Planning Commission in 1961;

2. the Annual Expanded School Census, a joint activity of the local school districts and the Intermediate School District of Macomb;

3. the annual membership reports prepared by the local school districts; and

4. a questionnaire, prepared by the Committee, which requested each district superintendent's projection of the local district enrollments, by grade, for the 1965-1970 period. The questionnaire also measured the distribution of high school students by curriculum, and the superintendents' judgments concerning the desirability of separate vocational education facilities at the high school level in Macomb County.

The Report on Population and Enrollments has been distributed to the local school districts for their guidance. The accompanying information summarizes the Committee report and presents some additional information in support of the Committee's findings, and extends some of the pertinent data to 1975 and 1980. In addition to the previously identified resources, the United Community Services study, The Future Population of the Detroit Metropolitan Area 1965-1980, has provided age-group projections used in the study.

Significant Characteristics of the County Population.

Table P-1 compares certain features of Macomb County's population with the population characteristics of the larger communities of which Macomb County is a part. The data, extracted from the U. S. Census of Population for 1960, indicate that Macomb County is younger, more fertile, wealthier, more industrialized and urbanized than the larger parent communities. Youth, family size, and fertility ratio indicate that Macomb's population will continue to grow at higher than national rates. The relationship which exists within the Detroit area between the educational attainment of the adult population and family income differs significantly from the relationship which prevails state-wide and nationally.

Table P-1

CHARACTERISTICS OF POPULATION FOR SELECTED COMMUNITIES, 1960

	Macomb	DSMSA	Michigan	United States
Median age	24.8	29.4	28.3	29.5
Population per household	3.78	3.44	3.42	3.3
Fertility ratio	656	519	534	
Percent under age 5	15.9	12.4	12.4	11.3
Percent of persons 25 and older completed high school	41.8	40.9	40.9	41.1
Median school years completed, persons 25 years and older	11.0	10.8	10.8	10.6
Percent urban population	87.4	94.7	73.4	69.9
Median Family Income	$7,091	$6,825	$6,256	$5,660

Table P-2, which was prepared by the Macomb County Planning Commission, details the 1965 Macomb County population in the pre-school, school age, and adult groups for the cities, villages, and townships of Macomb County. The 0-4 age group contains 13% of the total population, 33% are in the 5-19 ages, and 54% are 20 or older. The 5-19 age group increased as a proportion of the total population from 28.8% in 1960 to 33% in 1965. Three of every four Macomb County residents live in a city, slightly fewer than a fourth of the total population resides in the townships, and the villages house fewer than one of every fifty County residents. Table P-2 indicates the accelerating building boom in Macomb County. The 1965 dwellings exceed the 1964 total by 8,254; an increase of 6.2%, compared to a 1964 increase of 4.2% over the 1963 total.

Table P-2

MACOMB COUNTY POPULATION & DWELLINGS MAY 31, 1965

MACOMB COUNTY PLANNING COMMISSION

The rate of increase for Macomb County is expected to continue to exceed the growth rate of the larger parent communities as illustrated in Table P-3.

Table P-3

POPULATION PROJECTIONS FOR SELECTED COMMUNITIES

Area	1960 Population	1970 Projection	Percent Increase 1960-70	1980 Projection	Percent Increase 1970-80
United States	179,323,175	203,800,000	13.6	232,000,000	13.8
Michigan	7,823,194	9,150,000	16.9	10,800,000	18.0
Detroit Area*	3,762,360	4,414,500	17.3	5,355,000	21.3
Macomb County	405,804	614,500	51.4	855,000	39.1

A comparison of available projections of Macomb County's population is presented in Table P-4. The high projection (Column 1), was prepared by David Goldberg for Michigan in the 1970's, An Economic Forecast, by William Haber, et al.[1] The low projection, (Column 2), is derived from the United Community Services study. Column 3 indicates the projections prepared by the Macomb County Planning Commission. The MCPC projection anticipates a County-wide population growth of 65% from 1965 to 1980.

Table P-4

A COMPARISON OF POPULATION PROJECTIONS
FOR MACOMB COUNTY FROM 1965 to 1980

Year	(1) High	(2) Low	(3) MCPC	Actual
1965	532,100	491,613	509,000	519,468
1970	669,300	590,000	614,500	
1975	829,800	693,148	732,500	
1980	1,003,900	799,205	855,000	

[1]Bureau of Business Research, Graduate School of Business Administration, The University of Michigan, Ann Arbor, Michigan, 1965.

Table P-4 indicates that the actual 1960-65 increase has exceeded both the low and the middle projections, but is 12,632 less than the high projection for 1965. The projection prepared by the Planning Commission in 1961 is 10,468 short of the actual 1965 population. The Planning Commission projection appears to be the most realistic of those examined by this study, and is the only source of population projections for the political subdivisions of the County. The accompanying graph illustrates the comparative effect of each of the three population projections studied.

High projection: Michigan in the 1970's
Middle projection: Macomb County Population Projections 1960-1980
Low projection: The Future Population of the Detroit Metropolitan Area 1965-1980

The school age population (5-19) will continue to increase as a percent of the total county population, at least until 1975.

Macomb County Population by Age Groups
Percents

	0-4	5-19	20+	
1960	15.4	28.8	55.8	405,804
1965	13.1	32.9	54.0	519,468

Population Growth.

The rate of population increase in Macomb County has been much greater than that of the larger communities of which the County is a part. The comparative rates of growth are indicated on the following graph. The acceleration of Macomb's population began during the 1920's; since the 1930's Macomb has been the fastest-growing county in the state.

Population Distribution.

A major activity of the Survey has been the determination of the effect of anticipated population growth upon the future need for vocational technical education facilities in Macomb County. An examination of the distribution of population by areas of the County provides an indication of the quantitative need for such facilities in various localities within the County. For this purpose, the County has been divided into three regions which are characterized by significant past and anticipated future growth patterns. The accompanying graph, prepared by the Planning Commission, illustrates past County growth by regions, and indicates that 72% of the 1950-60 total growth occured between 8 Mile and 14 Mile Roads.

This projection of regional population growth is based upon the Macomb County Planning Commission projections to 1980 for all communities within the County, with subjective extrapolations to adjust for political boundaries which do not coincide with the 12 Mile and 26 Mile Roads.

MACOMB COUNTY GROWTH
by selected area

1965-1980

The southernmost area, extending County-wide from 8 Mile Road north to 12 Mile Road, has experienced the brunt of the post-World War II population growth. Relatively little land remains available for future residential development within this area.

The central area, extending from 12 Mile Road to 26 Mile Road, will continue to experience rapid urbanization. The major impact of the1965-1980 population growth in the County will be concentrated in this central area, which is expected to increase by about 260,000 persons. This is a gain of 135% for the fifteen year period. Population growth in the central area will account for about three-fourths of the total County increase from 1965 to 1980. The 26 Mile Road is a generalized northern limit of the area which will receive the major portion of the 1965-1980 population growth. Various expansionary factors could cause the outline of this central area to shift northward. Urbanization will not proceed evenly as a south-to-north movement, for the lack of utilities or the unsuitability for ready development of some land below the 26 Mile Road will result in relatively low growth for such areas.

Population growth in the six townships, and included cities and villages, which lie north of the 26 Mile Road is expected to account for only 15% of the County increase from 1965 to 1980. However, the rate of development of external factors could accelerate the urbanization of the north area. Some of these factors include:

the continuing economic expansion of the Detroit area

the extension of limited access highways

development of an adequate storm drainage system

extension of sewers and water lines

orderly land use management

cost of capital for land development and construction

property tax rates required to expand schools and other government services.

The accompanying Macomb County Profile indicates the urbanized area of the County in 1965, the rapidly urbanizing transitional area, and the rural area. This map, prepared by the Planning Commission, also identifies significant economic and cultural centers in the County. Urbanization of the central and north areas will develop most rapidly along the industrial corridors (M-53 and M-97), and major highways (US-23, M-53, M-94, M-97). Arterial road development and water line and sewer installations will cause some leap-frogging in the pattern of residential construction.

MACOMB COUNTY PLANNING COMMISSION

macomb county land use survey 1965

Natural Increase and In-migration.

The youthfulness of the County population and the large-scale increase in the number of its families indicate a continuing large number of births in the County. However, the 1964-65 decline in the birth rate nationally may be evident in the County census statistics. The 1964 population of 492,815 included 12,134 persons less than 1 year old, or 2.46% of the total population. The 1965 population of 519,468 includes 11,973 persons, or 2.30% of the total, in the under 1 year age group. Births account for slightly more than half of the net population increase of 113,664 persons from 1960 to 1965. This is in contrast to the 1940's and 1950's when in-migration brought twice the population growth which resulted from natural increase.

Planning Commission projections of population to 1980 assume continuing in-migration at a significant level. In-migration has added more than 10,000 persons annually to Macomb County's population for each of the past 20 years. In-migration has been high even in periods of relatively slow economic activity. The major portion of the Macomb in-migrants are received from neighboring counties.

Population in the 15 to 19 Age Group.

Identification of the age composition of the population is essential for determining the need for public services. The 15 to 19 age group, a grouping for which certain U. S. Census data is tabulated, has special significance because it contains virtually all persons enrolled in high school, the majority of all new work force entrants, new drivers of cars, and for many other such characteristics. This method of grouping has limitations; only about one fourth of all 18-19 year olds are enrolled in high school. Measurement of the age group does, however, provide the population of the largest group from which new Community College enrollments are drawn. The United Community Services study includes the projection of Macomb County populations by five-year age groups and offers a comparison for the age group projections made in this report. Further refinement of the 15-19 age group will be necessary to differentiate the high school population from the potential Community College population.

The exceptional growth of the 15-19 age group in the County population can be seen in the following graph.

Future populations in the 15-19 age group, and all similar projections in this report, have been derived by adding to each five-year age group (0-4, 5-9, 10-14), in the present resident population, the actual number of persons who migrated into the comparable age group during the 1960-65 period.

In-migration is predicted to continue numerically consistent with the 1960-65 experience for the succeeding five year periods from 1965 to 1980. Projections of migration are speculative. Fortunately, the Annual Expanded School Census identifies the 0-19 age population of the County by yearly age group and it is possible to re-assess migration projections annually.

Two sources are available for the estimation of the future size of the 15-19 age group in the County population. The United Community Services study projections are compared in Table P-5 with projections based upon the Annual Expanded School Census.

Table P-5

MACOMB COUNTY POPULATIONS IN THE 15-19 AGE GROUP, 1965-80

Year	UCS Projection	1965 Population	Projection based upon 1960-65 Migration
1965	44,707	39,877	------
1970	62,997	57,929 (10-14)	59,058
1975	74,838	72,771 (5-9)	78,495
1980	77,354*	68,223 (0-4)	84,298

*adjusted upward to reflect actual 1965 population in the under-5 age group.

The actual 1965 population in the 15-19 age group is 4,830 less than the UCS projection for 1965. However, the 1970 population in the age group could equal or exceed the UCS projection for that date. If in-migration continues at the 1960-65 rate for the 1965-75 and 1965-80 periods, populations in the 15-19 age group will be greater in 1975 and in 1980 than the projections of the UCS study. It seems a conservative assumption that the 15-19 age group will contain between 75,000 and 80,000 persons in 1975.

The proportion of 15-19 year olds to the total County population will increase significantly from 1965 to 1975 as indicated in this graph.

15-19 Age Group
Percent of County Population

Labor Force Entrants.

One measure of the potential increase in the labor force is determined by the number of persons reaching age 18 each year. Each year, for at least the next fifteen years, Macomb County will experience a new record in the number of persons reaching age 18. The rate of increase will be fairly regular and will average an additional 800 18 year olds annually from 1965 to 1975.

Number of 18 Year Old Persons
in Macomb County 1950 to 1980

Senior High School Enrollments, 1965-1980.

Measurement of the future senior high school enrollments cannot be made precisely. An examination of the school participation rate for age groups and judgments concerning changes in this participation rate can be coupled with present population and anticipated in-migrants to project the future enrollments in Macomb County senior high schools.

The majority of 12th grade students are 17 years old, 11th graders, 16 years old, and 10th graders, 15 years old. The greatest variation from this pattern occurs in grade 12, in which approximately one third of the 18 year olds and somewhat fewer than one fifth of the 19 year olds are enrolled. This older group is offset by a small number of persons who graduate before attaining age 17, and by a larger group of 17 year olds who are enrolled in grades lower than grade 12. Similarly, some 16 year olds have not attained grade 11. Significantly more persons require more than three years to complete grades 10-12 than complete these grades in less than three years. The consideration of these factors, and making some reservation for the numbers of 15-17 year olds in the County population who are institutionalized, in ungraded special education programs, attending schools outside the County, or have terminated school before high school completion, indicates that enrollments in grades 10-12 will be greater than the number of 15 to 17 year olds enrolled in school, but less than the total number of 15 to 17 year olds in the County population. The following table indicates the ratio of population by age to grade enrollments. No adjustment has been made for migration during the period from May, when the census was taken, to October, when school enrollments were counted.

Table P-6

COMPARISON OF POPULATION AGED 15-17 AND HIGH SCHOOL ENROLLMENTS

Age Group	Population May 31, 1965	Enrollments October 1, 1965	Ratio of Age Group to Grade Enrollments
15	9,308	10th- 9,153	98.3
16	9,182	11th- 8,247	89.8
17	8,565	12th- 7,163	83.6
15-17	27,055	24,563	90.8

While enrollments in grades 10-12 are equal to 90.8% of the County population in the 15-17 age group, the factors pointed out above indicate that the school participation rate of the group is significantly lower than this. The 1960 Census data for Macomb County reported the school participation rate for 16-17 year olds as 84.1%. Reports submitted by Macomb County high school principals indicate that 20% of the public high school student body terminate school before graduation. For every 100 Macomb County residents who entered 9th grade in September, 1960, only 81 persons graduated from high school in 1965, despite a gain of in-migrants over out-migrants in the age group.

The long range trend toward retaining in school a higher proportion of the school age population will continue, but at a decreasing rate. U. S. Census data reveals this trend for 16-17 year olds in Michigan.

Table P-7

ENROLLMENT OF 16-17 AGE GROUP IN SCHOOL, MICHIGAN - 1930-60

Year	1930	1940	1950	1960
Percent Enrolled	61.7	73.1	80.2	84.1
Increase Over Previous Period	----	11.4	7.1	3.9

Table P-8 indicates possible high school enrollments from 1965 to 1980. In addition to an increasing school participation of the 15-17 age group, a significantly higher proportion of 18-19 year olds are expected to remain in high school until graduation. Based upon these assumptions, high school enrollments in 1970 are expected to exceed the 1965 participation rate by five percent of the 15-17 age group, and by ten percent in 1975.

Table P-8

MACOMB COUNTY POPULATION AGED 15-17
AND POTENTIAL HIGH SCHOOL ENROLLMENTS

Year	Population	Grades 10-12 at 1965 Participation Rate	+5% of age Group	+10% of age Group
1965	27,055	24,545	----	----
1970	38,646	35,052	36,984	38,917
1975	49,818	45,185	47,676	50,167
1980	51,677	46,871	49,455	52,039

The high projection for 1970, 1975, and 1980 would probably be achieved with the participation of 90% of the 15-17 population. Participation rates well above this figure are being attained already by some school districts in the Detroit area.

Other factors which may increase future County high school enrollments include:

increasing migration into the County,

more rigid compulsory attendance statutes,

changing economic conditions,

effects of government social welfare programs, especially those designed to keep the potential dropout in school, or to re-enroll the early leaver,

school programs which are realistic to the interests and capacities of the majority of the school age group which is not identifiable as college-bound.

Superintendents' Estimates of Enrollments.

Estimates of September, 1969 enrollments in grades 10-12 were prepared by the superintendents of the 21 local school districts. Table P-9 presents these projections by districts.

Table P-9

ENROLLMENTS IN GRADES 10-12 MACOMB COUNTY SCHOOL DISTRICTS

North Area		Central Area	
Anchor Bay	575	Chippewa Valley	653
Armada	314	Clintondale	752
New Haven	295	Fraser	1,036
Richmond	373	L'Anse Creuse	1,343
Romeo	800	Mt. Clemens	1,445
		Utica	3,240
Total	2,357	Total	8,469
Southeast Area		Southwest Area	
East Detroit	2,820	Center Line	1,131
Lakeview	1,750	Fitzgerald	1,210
Roseville	3,094	Van Dyke	1,320
St. Clair Shores	1,940	Warren	4,734
South Lake	940	Warren Woods	1,370
Total	10,544	Total	9,765
Total Public Schools			31,135
Projected Parochial 10-12 Enrollments			2,500
Total all schools - grades 10-12			33,635

The addition of County parochial enrollments, including an increase based upon the past ten years' experience, indicates a County-wide enrollment in grades 10-12 of 33,635 in September, 1969. This is 585 students more than projected by this report if no reduction in the school dropout rate is achieved between 1965 and 1969. If an additional 1% of the 15-17 group participates in school each year, as predicted by this report, the September, 1969 enrollment will be 34,505, or 870 more students than the total of the district superintendents' projections. The differences between these projections do not seem extreme considering the wide array of criteria which may have been used in the 21 local district estimates and the conceded imprecision of population and enrollment projections such as those presented in this report.

Future Vocational Enrollments in Senior High School.

Data is not available which identifies the future quantitative need for particular high school programs of study. Some generalizations can be made from the existing enrollments coupled with judgments concerning future trends. Various activities of the Survey attempted to measure the present enrollments by program of Macomb County senior high school students.

Table P-10

ENROLLMENTS BY PROGRAMS MACOMB COUNTY HIGH SCHOOLS, 1965

Source	College Prep	Vocational	General
Students	42.5	33.4	24.1
Principals	37.4	32.0	30.6
Superintendents	40.0	37.0	23.0
Averages	40.0	34.	26.

The greatest variation in these identifications of student enrollments by programs exists between the principals' and superintendents' estimates of the proportion of high school students who are not enrolled in either the college preparatory or a vocational program of studies. Superintendents reported that 23% of the high school students are general program students; high school principals report one-third more students in this group.

The measurement of present enrollments in vocational programs have only limited value in determining future need for vocational programs. Enrollments may result from what is not available rather than what is available. Poor programs draw few students; non-existent programs enroll no students. The present high enrollments in college preparatory and general programs, (66 of every 100 Macomb County high school students) seem unrealistic in view of the numbers of students who intend to seek employment upon high school

graduation, (48 of every 100 seniors in 1965). Of Macomb County parochial high school seniors, 49.3% were enrolled in college preparatory programs compared to 41.9% in public high school. There is no evidence that more parochial students in the County continue on to college than do public school graduates. There is, however, ample evidence that parochial students have less opportunity to enroll in vocational programs. More pertinent indication of potential enrollments may be found in the reports of 1965's seniors. Sixty percent of all students, and three fourths of those enrolled in the general program, definitely or probably would have taken a vocational program if a wider choice of such programs had been available when they entered high school. Fewer than one tenth of the seniors rated the choice of courses now offered in high school as "excellent."

The Annual Fall Statistical Report (Form DS-A) submitted to the Michigan Department of Education provides an indication of the high school graduates' enrollment in college. These reports are, to some degree, prepared from high school students indications of intent while still enrolled in high school.

Table P-11

COLLEGE ENROLLMENTS OF MACOMB COUNTY HIGH SCHOOL GRADUATES
1962-64

Year	Percent enrolling Colleges, Junior Colleges, Universities	Percent enrolling Business Schools, Trade Schools, etc.	Percent not enrolling
1962	31.1	8.8	60.1
1963	32.4	7.4	60.2
1964	31.3	5.2	63.5

Comparison of Tables P-10 and P-11 indicates that, even if all persons enrolling in college had followed a college preparatory program in high school, only three of every four such persons actually proceeds to college upon high school graduation. Table P-10 indicates that 6 of every 10 high school graduates, at least for a time, enters the work force upon high school completion. An additional twenty percent of the high school age group have terminated school before high school completion, and are presumed to be in the work force.

A distribution of 1975's high school students in programs more realistic to their own and society's needs is presented in the following graph. Senior high school enrollments will be 50,000, double today's. While the projected participation by program may seem idealistic, actually these, or any more desirable distribution, can be achieved if suitable opportunities are made available. The most influential determinant in students' program choice is the quality and variety of the choices available.

1965 ACTUAL AND 1975 POTENTIAL DISTRIBUTION
OF MACOMB COUNTY HIGH SCHOOL AGE GROUP BY
ACADEMIC PROGRAMS

Of every 100 persons in the Macomb County high school age group today, 20 are school dropouts, and 21 are identified as general program students. Expanded high school vocational programs for employment-bound youth are predicted to cut the dropout rate in half by 1975. The development of high school pre-technical programs designed to prepare youth for occupational programs in the Community College should virtually eliminate the practice of classifying non-program students as "general program" students.

Under the grouping visualized for 1975, 16,000 students would be enrolled in each of the three major high school programs, college preparatory with academic emphasis, pre-technical as preparation for Community College occupational programs, and vocational for direct job entry.

Implications of the Population Growth and Increasing School Participation.

No attempt has been made to measure the adequacy quantitatively of existing senior high schools facilities in Macomb County. Assuming that present high schools are being utilized to capacity, a doubling of present facilities from a capacity of 25,000 students to 50,000 students in 1975 is indicated by the projected population growth alone. The trend toward retaining in school a larger proportion of the high school age population will likely add another 10% to the needed capacity by 1975.

The need for additional classrooms will not be a County-wide problem, but will be concentrated in the school districts serving the population residing between the 12 Mile and 26 Mile Roads, and to a lesser extent, north of the 26 Mile Road. If the adequacy of the vocational education facilities existing south of 12 Mile Road could be assumed, there would be little additional need for such facilities in this area. Examination of student enrollments by programs, the judgments of high school principals, and the Survey study of the existing facilities and programs in vocational education do not support this assumption. Vocational programs and facilities in the South Macomb area can only be evaluated as better than programs and facilities found in the central and north County regions. Measured against student needs and the nature of entry employment opportunities, the need for improved occupational programs and facilities is critical County-wide.

Each year will see a record number of 18 year olds in the Macomb County population, averaging an increase of 800 over the previous year. The adequacy of the preparation of these persons for employment or for further education is of concern to all.

This report raises the following questions:

What types of new school facilities will serve best the needs of the school age population in a changing economy?

Where should these facilities be located for the greatest utility?

Will it be more practical to provide some types of education on bases larger than the individual school districts?

How can new facilities be most practically and equitably financed?

Subsequent chapters of this Survey report will attempt to provide guidance in determining the answers to these questions.

EMPLOYMENT OUTLOOK FOR MACOMB COUNTY YOUTH
1965 - 1975

The Detroit Metropolitan Area of Wayne, Oakland, and Macomb Counties Offers Many and Varied Opportunities for Satisfying Careers...

TO

....1975's Labor Force Which Will Be 28% Larger than 1960's Labor Force...

WITH

....15 to 24 Year Olds in the Labor Force Increasing by 85%...

Job Opportunities Will Increase at About the Same Rate

BUT

....Unskilled and Semi-skilled Jobs Will Not Increase...

AND

....Young People Entering the Labor Force Without Adequate Job Skills Will Face Unemployment...

UNLESS

....Our Educational System Meets the Challenge of Our Changing Technology

MANPOWER NEEDS 1965 - 1975

The Need for Analyzing Employment Trends.

Occupational education is effective to the degree that programs are developed and offered upon the study and analysis of present and emerging employment characteristics within an area which can be most effectively utilized for the placement of persons trained in such programs. Past occupational program planning essentially consisted of the expansion of existing programs to accommodate rising enrollments. Federal and state reimbursement policies have compelled a rigidity in programs which have ignored changing employment patterns. For example, reimbursement of school programs in agriculture and homemaking as vocational subjects have had little relationship to the employment opportunities in these fields; while office occupations, a major emerging job entry field, has not benefited from federal reimbursement until quite recently. The rapidity and breadth of technological changes in our productive processes have made further continuation of planning occupational programs for the past an untenable practice. The social costs for society and the individual are exorbitant. As a consequence of this failure to keep pedagogy abreast of technology, the once reasonably adequage, though non-directed, relationship between the skills requirements of our economy and the development of our educational institutions has been seriously dislocated. This dislocation has gone unattended as we have failed to reinvest a sufficient share of our capital increment in education.

The unrelatedness of public education to employment needs has been aggravated since 1957, when apparent deficiencies in the preparation of scientists gave impetus to a massive upgrading of the college preparatory function of the U. S. high school. As a consequence, high school students in 1964 reported by a seven to one margin that the high school favors the college-goer's needs over the needs of the employment-bound student. This is a 50% increase over the proportion of students registering the same opinion in 1953, four years before SPUTNIK triggered the adoption of the National Defense Education Act.[1]

One consequence of ignoring the educational needs of the non-college bound majority is that many opportunities for employment in highly skilled categories are not being exploited. At the same time, a significant number of persons are seeking employment at levels where there are insufficient jobs to meet their demands. This imbalance between jobs and job-seekers is most alarming at the low-skills level, but it is also experienced by college graduates who lack specific skills. Secretary of Labor, W. Willard Wirtz, has expressed the human aspect of the problem as it applies to the untrained: "There is no future in this country for the unskilled worker. What has been his job is going to be done by machine."

[1] Youth's Attitude Toward School, Teenage Employment Problems, and Women Working, Measurements and Research Center, Purdue University, Lafayette, Indiana, January, 1965. p.4.

There are risks inherent in attempting long-range projections of the employment characteristics of the national or local economy. Factors which cannot be measured precisely, such as new inventions, productive changes, changes in consumer demand, population migration, and domestic and international political developments, will unbalance the most carefully drawn projections. The need for the best available estimates of emerging economic trends and the consequent changing needs for labor is so vital to the planning of effective occupational education programs that the effort must be made despite the risks of error. Any errors made in venturing such projections are sure to be less costly than the certain consequences of avoiding this responsibility.

Sources of Data.

The most comprehensive source of information on employment by occupations and industries for the Detroit area has been data provided by the decennial population census. Between census years, estimates of employment are issued in the Monthly Report on the Labor Force which is based on a nation-wide sample survey of 35,000 households, and reports of the Michigan Employment Security Commission. Unfortunately, information on the details of the future demand for labor is not in proportion to the need for this information in educational planning. The needed information can only be derived from a continuing analysis of all factors affecting demand for workers in each occupation and industry, the assessment of how these factors may operate in the future, and the projection, based on judgment, of the combined effects of these factors on future skills requirement.

Some current research activities hold promise for planners of occupational programs. The Battelle Memorial Institute of Columbus, Ohio, is currently analyzing the future labor market in Michigan and the Detroit Metropolitan Area, under the sponsorship of the Michigan Employment Security Commission, the Michigan Department of Education and the Michigan Department of Economic Expansion. The U.S. Department of Labor has made grants to many universities throughout the country, for research of the complex of factors affecting the growth of occupations. This information will be available to schools as these studies are completed.

The U.S. Bureau of Labor Statistics' current revision of the Occupational Outlook Handbook, which will be available in 1966, is making occupational projections by industries identified to the three-digit level of the Standard Industrial Classification Code.

In addition to these sources, the following studies of the national, regional and local economies, populations, and work forces have been utilized in this analysis of the local employment outlook which has been prepared for the use of educators as a basis for the planning of effective programs of occupational education in Macomb County.

Identification of the Local Labor Market.

The labor market is the focus of attention for an analysis of occupational opportunities. The labor market is a recognizable area which provides a fixed number of persons within a given region, at a given time, with employment or potential employment. The three counties, Macomb, Oakland, and Wayne constitute the labor market which can be most usefully studied to identify the local needs for occupational education and which can be profitably exploited by such programs. The Bureau of the Census recognizes the economic unity of this region and much of the population and economic data of the Census is reported for the three counties as a unit identified as the Detroit Standard Metropolitan Statistical Area (DSMSA). The Michigan Employment Security Commission utilizes the same region for reporting labor force and employment data. The practicality of this is borne out by local employment characteristics. Of Macomb County's 1960 work force, 47.6% were employed outside of Macomb County, and the corresponding figure for Oakland County was 39.8%; only 16.6% of the three-county labor force were employed outside the Detroit Metropolitan Area. The occupational analysis prepared for this report uses the Detroit Metropolitan Area as the local labor market, unless otherwise noted. Table L-1 illustrates that the Detroit area's employment by occupation is a virtual microcosm of the national picture. This is a happy circumstance for it provides a richness in the variety of opportunities for employment and a degree of assurance of employability for skilled workers who migrate to other areas. This indicates that Macomb County schools can be somewhat provincial in the determination of the labor needs for which youth are to be trained, and that local curriculum planning can be based upon national labor needs studies with a minimum of adaptations for local variations.

While the opportunities for job entry are metropolitan in scope, the responsibility for providing educational programs which are adequate to securing entry employment, and the financial and social costs which are consequent to a failure to provide such education, are primarily obligations of the County and its political subdivisions, and its public schools. Stated as a broad generalization, the school systems of the three counties of the Detroit Metropolitan Area are in competition to provide their respective clients with the education necessary to gain and hold employment in a complex and rapidly changing economy. In times of economic dislocation, those communities whose schools have failed to meet the challenges of this competition will bear an inordinate share of the consequent welfare costs.

The Detroit Area Labor Outlook.

Jobs exist because there is a population to be served. In projecting the future demand for labor, one of the fundamental parameters is the projection of future population and its participation in the labor force. Table L-2 compares these projections for the Detroit area in 1975 with the 1960 Census data.

The projections reflected in Table L-2 indicate a number of changes that are significant to the planning of occupational programs for the youth of Macomb County. In the Detroit area the workers in the 15 to 24 age group will increase from 220,000 in 1960 to 406,000 in 1975. Macomb County's participation in the labor force for this age group will increase from 22,000 to 65,000 during this period. The growth of this age group is the most important single factor shaping the labor force of the coming decade, and will account for over fifty percent of the total growth of the Detroit area labor force during the 1960-75 period. Despite an increase of more than 300,000 workers in the total labor force, the number of operatives and laborers (forecast in Table L-7), will decrease as a proportion of the total labor force.

The most obvious consequence of the large increase in the number of young people in the labor force will be the intense competition for the jobs which will be available to semi-skilled and unskilled workers. The extent of this problem is detailed further in a subsequent discussion of the occupational outlook for operatives and laborers. Table L-2 indicates the 1975 labor force participation based upon the 1960 participation rates. While these rates are, in most age ranges, adequate for the purposes of this study, the participation rates of two groups will change markedly from 1960 to 1975;

a) an increasing proportion of women will re-enter the work force after raising their families;

b) the continuing trend toward earlier retirement will reduce the participation rate for workers in the 65 and over age group.

Craftsmen & Foremen	15.8	14.
Proprietors, Managers	7.4	7.
Laborers	4.0	3.
Not Reported	4.8	4.

Nationally, the participation rate of women in the 45-54 age group is projected to increase from 49.3% in 1960, to 57.6% in 1975. For the same period, participation by males over 65 will decrease from 32.2% to 23.4%. These are but two examples of the effects of institutional changes upon the labor force; in the case of women re-entering the labor force, early marriage is a significant factor. For males over 65, and eventually for significant numbers in the over 60 age group, labor contracts with special incentives for early retirement are a causative factor. The full significance of these participation rates changes can be best understood when compared to the labor force participation rate of the entire population, which will increase by only one-fourth of one percent from 1960 to 1975. Participation rates must be examined in conjunction with the quantitative measurement of specific groups. Because of the unusual growth of the 15 to 24 age group, the participation rate alone does not indicate the great numerical increase in the labor force participation of this group.

Table L-4 projects the 1975 labor force participation of the Detroit area population, by age groups.

Table L-4

DETROIT METROPOLITAN AREA LABOR FORCE AND LABOR FORCE PARTICIPATION OF THE 15-24 AGE GROUP 1960 and 1975

Population, its age and sex characteristics, and its participation in the labor force comprise but one facet of the complex of factors which must be projected to determine the future need for occupational education programs. An understanding of coming changes in industry and the occupational patterns of employment is required. The problem might be simplified as follows:

> The changing nature of the demands for goods and services, conditioned by such factors as rising population, increased disposable income, advertising and new products, changing customs and tastes,
>
> **STIMULATES**
>
> innovations in productive and distributive processes, the development and use of new materials, which
>
> **CREATES**
>
> demands for more highly developed skills, changes in quantitative demands for existing skills, needs for skills in new technical areas, and unique combinations of existing skills, and
>
> **DIRECTS**
>
> educational efforts to impart these skills to persons seeking to participate in the economic life of the community.

Industry, occupations, and education are factors which must not only be examined as unities but as interacting aspects of a larger whole.

There are various approaches which can be taken in projecting future occupational employment. One method is to review past trends and to assume a continuation of these patterns into the future. The primary recommendation for this technique is its convenience; it has demonstrably little merit for the forecasting of trends. Significant shifts in employment patterns frequently result from the unexpected innovation, such as mechanical inventions, rather than as consequences of measurable trends. Historical experience does, however, provide insights into the tremendous dislocations in employment which can occur during relatively short periods of time.

Table L-5 reflects the occupational shifts which occurred in the Detroit area during the 1940's and '50's. Operatives and kindred workers increased by 38.2% during the 1940's yet decreased by 13.2% during the 1950's. The employment of laborers remained relatively static during the 1940's and '50's quantitatively, while the total work force increased by 49.8%. Craftsmen increased by 33% from 1940 to 1950, but did not increase in numbers during the decade of the 1950's despite a total labor force increase of 11.4% locally.

Table L-5

Source: Employment data from the U. S. Census of Population

A significant change, both nationally and locally, has been the shift to white collar jobs. During the 1950's, for the first time in both areas, white collar workers (professional, technical, managerial, office, and sales workers), outnumbered blue collar workers (craftsmen, operatives, and laborers). Nationally, both blue collar and white collar jobs increased during this period; however, most of the total growth in employment was represented by the white collar occupations. Locally, during the fifties, blue collar employment decreased by 50,000, while white collar employment increased by over 100,000 workers. The loss of blue collar jobs was almost totally due to technological and geographic changes in the production of motor vehicles.

While the earlier shift from an agricultural economy to a manufacturing economy did not require a higher level of education for workers, the shift to white collar employment demands higher educational attainment, even for blue collar workers. The more highly trained craftsmen experienced a more favorable employment trend than the less skilled operatives and the unskilled laborers, whose numbers declined by 14% during the 1950's.

Among the white collar workers, the fastest growing group, locally and nationally, have been those employed in the professional-technical sector. The growth rate of this group has been five times the rate of increase in the total labor force. Clerical, sales, and service workers increased at a rate twice that of the total labor force. Only the proprietor-manager group, consisting mostly of owners of small businesses and salaried officials in government and private business, decreased during the period. This decrease resulted principally from a decline in the number of self-employed proprietors. The salaried officials reflect employment increases similar to those of clerical and sales workers - one of the fastest growing employment sectors.

Opportunities for Employment.

Where will the 1,755,000 persons in the Detroit area labor force of 1975 find employment? Attempts to answer this question must necessarily be highly speculative. Because this information is essential for the planning of occupational programs, the available studies deserve careful scrutiny by educators. Information is very limited as to the future requirements for specific occupations, but generalizations can be drawn from the available projections of industry growth patterns. Dr. Wilbur Thompson of Wayne State University has projected employment by industry to 1975 in the study, Michigan in the 1970's. Table L-6 which is drawn from this study reflects the estimated changes in the distribution of employment by industry.

Table L-6
DETROIT METROPOLITAN AREA EMPLOYMENT PROJECTIONS, 1975, BY INDUSTRY

	Employment, 1960		Projected Employment, 1975		Projected Change 1960-75	
	Number	Percent	Number	Percent	Number	Percentage Increase

Source: Haber, Spivey & Warshaw, Michigan in the 1970's

Manufacturing will maintain its position as the most significant employer, and will provide one-third of all jobs in 1975; however, it will be the industry with the slowest rate of growth. This is partially because manufacturing is the largest industry, but more significantly, the result of a trend toward service type employment. Employment will increase fastest in the areas of professional services, public administration, business and repair services, and the construction industry. This marked trend toward service and white collar employment should receive careful consideration in curriculum planning, and indicates the advisability of reassessing the need for the traditional vocational programs.

Thompson projects 371,400 more jobs in 1975 than were available in 1960. In the United Community Services study, Dr. Albert J. Mayer, also of Wayne State University, estimates a need for 314,655 more jobs in 1975 than were available in the Detroit area in 1960.

The industry shifts indicated in Table L-6, coupled with technological and institutional changes will affect the distribution of employment by occupations. Occupational distribution projections identify the need for vocational-technical programs quantitatively. Table L-7 is based upon the rates of occupational change predicted for the State through the year 1970, by the Michigan Employment Security Commission, and upon the non-quantitative judgments contained in Michigan in the 1970's.

The Occupational Outlook for Specific Groups.

Local educators charged with planning and offering programs in occupational education must be provided with evidence, both quantitatively and selectively, of the employment needs of the local labor market. The employment outlook for selected population groups and for selected occupational areas are presented in an effort to provide guidance to local educators. The information offered represents the study staff's interpretation of the information derived from available studies and statistical data.

The Employment Outlook for Men, 1965-1975.

Table L-8 identifies the employment by general occupational grouping of males, ages 18-29, in 1960. Seven of every ten 18 and 19 year old male workers in 1960 found entry employment as operatives, laborers, clerical, or sales workers. Table L-7 projects a sharp decline in the proportion of operatives and laborers in the 1975 work force. While entry opportunities will expand markedly for clerical and sales, and service workers, the combination of low wages and custom make the entry level jobs available to unskilled men unattractive. Many jobs in these areas will be part-time, and/or low-paying, and will not satisfy the financial needs of men who are heads of households. Traditionally, most men are not attracted to secretarial, stenographic, clerical, retail sales, nursing, and many of the service occupations, and few boys enroll in high school programs designed to provide competence in these fields (only 8.2% of 1965 senior boys in Macomb County high schools were enrolled in business or office occupations). If the employment opportunities which will exist in these fields are to be adequately exploited by males, strong efforts will need to be made to overcome the stereotyped attitude that certain jobs are "women's work."

Employment opportunities will expand most rapidly in the professional and technical occupations (Table L-7). These occupations require two or more years post-high school education of a specific nature for entry. Unfortunately, very little opportunity to acquire this type of education is available locally.

Manufacturing will continue to offer the greatest number of job opportunities for men in the local area during the 1965-1975 period. However, manufacturing employment will account for only 36.9% of all local employment in 1975 as compared to 40.8% in 1960. The contraction will occur in the employment of operatives, a traditional entry occupation for young men, which is reported in more detail in another section of this study.

In summary, the entry employment opportunities for young males who lack saleable skills will be bleak, as the need for large numbers of operatives and laborers in manufacturing disappears. This is a recurrence of an earlier experience when mechanization displaced the farm worker; with this disturbing difference: the factory provided employment for the displaced farm worker. There is no similar alternate opportunity today for the employment of unskilled young men unable to find employment in manufacturing. The implications are quite clear. Strong efforts must be made to retain boys in school, at least until high school completion, and to make available to each student an educational program through which he can acquire the specialized skills needed to continue up the educational ladder or to gain entry employment, and preferably, both.

The Employment Outlook for Women, 1965-1975.

Local employment of women probably will be at a slightly higher rate than the national employment of women. Women are predominantly employed in the professional-technical (nurses, teachers, medical technicians), clerical-sales (secretaries, typists, clerks, retail salesworkers), and service occupations, which will undergo the greatest expansions during the period. Table L-10 indicates that entry employment for women in the 18-19 age group is found primarily in the secretarial, stenographic, clerical, and sales occupations. Existing programs in these areas are the most effective occupational preparations offered by high schools at the present time. Because of the continuing expansion of these occupational areas and the relative adequacy of school programs, girl graduates who have followed these programs have significantly better opportunities for entry employment than do boys, regardless of their high school program.

Source: U. S. Census of Population, 1960 PC (1) 24D Mich.

Large numbers of young women, older women, and married women will enter or re-enter the work force during periods of expansion. The employment of married women and older women, especially in part-time work, will fluctuate with economic conditions. Much of the labor force participation of these women is optional, and reacts to market demand and wages offered. The training needs of women re-entering the work force after raising their families and the need to upgrade secretarial skills will create a continuing demand for post-high school occupational education.

Entry Level Occupations.

Table L-10 shows the employment of 18 and 19 year olds by sex in 1960. Entry into employment in the less skilled occupational categories will continue to dominate the employment pattern of these groups during the period. Entry level data may be misleading. Frequently, persons gain entry employment at low skill levels because they possess training which indicates that they will be able to perform at higher levels with a minimum of additional training. Macomb County employers' indications of entry level jobs and the education required to gain entry are reported in a separate section of this report. (Tables L-14, L-15, L-16).

Employment of Technicians.

This is the key occupational level for the 1960's and 70's, and offers the greatest opportunities for entry employment at significant wage levels.

An adequate supply of highly skilled workers is essential to the establishment and expansion of business enterprises and the upgrading of public services; an inadequate or uncertain supply of needed skills discourages the investment of enterprise capital. A failure to provide adequate educational facilities and programs for the training of technicians and semi-professional workers can be predicted to have a depressing effect on employment opportunities at all skill levels.

The Associate in Technology degree is expected to achieve the recognition locally which has been evident already in other regions, as the graduates of six to ten Detroit area community colleges are placed in industry to supplement the limited numbers of skilled tradesmen who attain journeymen status through formal apprenticeships. The broader training of the technician should give him an advantage over the apprentice in accommodating to occupational change. Most local area technicians will be employed in manufacturing (Metallurgical, industrial, design, graphics, mechanical, data processing, electronics), but, increasingly, this level of skill will be in demand for public service (sanitation, police, fire, recreation, transportation, engineering), and in health services. Table L-5 indicates that growth of the professional, and technical, and kindred workers group has been 5 times as rapid as the growth of total employment in the Detroit area during the 1950's and 1940's.

Foremen and Craftsmen.

This group will increase numerically in the Detroit area between 1965 and 1975, but not so rapidly as the total labor force. Greater productivity per worker because of increasing capital investment in manufacturing will enhance the importance of foremen and craftsmen and cause their wages to increase faster than the general index for the area.

Operatives and Laborers.

This group will decline both quantitatively and as a proportion of the local work force as it continues to be most susceptible to technological displacement. However, because of high productivity in local manufacturing and the generally high wages which will prevail in the area, operatives' wages will continue to be high in comparison to operatives in other localities, and in relation to national and local income medians. This decreasing need for operatives and laborers in the work force is the most significant factor in the local employment outlook for the next decade. A failure to meet this condition head-on will be disastrous for Macomb County as can be seen by the following projection of the availability of local jobs in these categories.

DETROIT AREA EMPLOYMENT OF OPERATIVES AND LABORERS IN 1975

AGE	Estimated Male Labor Force, 1975	Percentage 1960 Labor Force in Operative and Laborer Jobs	1975 Need for Operative and Laborer Jobs at 1960 Participation Rate
18 - 19	38,890	44.8	17,423
20 - 24	162,343	34.7	56,333
25 - 29	158,861	30.1	47,817
Total	360,094		121,573
Available Operative and Laborer Jobs, 1975			55,975
Detroit Area Males 1975, aged 18 to 29, who will be unemployed unless higher level skills have been acquired.			65,598

It is likely that this projection of the future demand for operatives and laborers is optimistic rather than pessimistic. One local automotive plant, employing several thousand operatives, projects a 66 2/3% decline in the employment of operatives by 1970. At the same time, as the job opportunities in these categories are decreasing, the male labor force in the 18-29 age group will increase by an estimated 177,100 persons. The result of this inverse relationship between the shrinking semi-skilled and unskilled employment opportunities and the growing population, is projected to result in unemployability for twenty percent of the 18-29 age group, unless saleable skills in other expanding occupational areas have been acquired. At least 10,000 Macomb County males of the 18-29 age group will be found in this unenviable class of persons in 1975. Because unemployment generates increased tax burdens, in addition to the waste of manpower and the loss of personal dignity, the potential employability of our citizens is of concern to all.

The employment of operatives in manufacturing was abnormally high in 1965, reversing the long-run downward trend, and reflecting the high demand for all labor created by continued high levels of durable goods production, especially motor vehicles. This boom condition headed off the crisis anticipated to occur with the entry of a record number of eighteen-year olds into the labor force in 1965. If the present peak demand for automobiles continues, manufacturers can be expected to react by expansion of productive capacity, especially by the additional use of automated production machinery which will cut heavily into those structured jobs which are most susceptible to elimination. Thus, the marginally-employed operative who does not upgrade his job skills to a significant level may be displaced even during a period of relatively high employment and economic prosperity.

Clerical and Sales Workers.

The proportion of area workers in these occupations will increase by 41% from 1965 to 1975. The demand for secretarial and high level office skills will intensify, but the need for routine clerical skills will be curtailed by applications of automated processes for reproducing, filing, and retrieving information. The demand for sales workers will be high, but many of these jobs will be at wage levels significantly lower than the median for the area. Women will continue to dominate in clerical and sales employment, partly because of prevailing low wage levels.

Service Workers.

While this group will increase in the 1965-1975 period, it should be noted that the largest single included group are waitresses, an occupation with generally low income. The rising level of personal income and the increase in population, especially among the aged and the very young, will stimulate demands for health services, personal services, and food services. High levels of disposable personal incomes will stimulate many innovative businesses seeking to exploit this income. If past patterns continue, service occupations will provide significantly more employment opportunities for women than for men.

Farmers and Farm Workers.

A steady shrinking of local farm employment will characterize the decade. The per-acre income from such local farm products as sod, garden produce, ornamental shrubs, flowers, and specialty foods such as mushrooms and rhubarb, is very high in comparison to farm income generally, and should be reflected in more realistic incomes for farm workers who are at present the lowest paid occupational group in the national economy. Limited opportunities will exist for agricultural specialists such as ornamental landscapers and florists.

Manufacturing Employment.

Employment in local manufacturing will increase, but at a significantly lower rate than the increase in the total labor force (Table L-6). Manufacturing is particularly adaptable to computerized and automated techniques, and local manufacturers have the capital to undertake these changes. The result will be a continuous rise in output per worker with a lessening need for new workers. The heavy local dependence upon the motor vehicle industry which provides 17.5% of all wage and salary employment, compared to 1.3% nationally, will continue, but at a decreasing rate. In the fifteen years from 1947 to 1962, annual output per worker in the manufacture of vehicles increased from 7.55 units to 14.65 units, or a virtual halving of the manpower requirements per unit. This trend will continue. The reduction in manpower requirements will be almost solely in the unskilled or semi-skilled areas, while opportunities for employment at higher skill levels will expand.

Non-manufacturing Employment.

Most new jobs will be created outside of manufacturing. Construction is anticipated to increase locally, but with much of the construction work pre-fabricated rather than built on the site. Construction wages will remain relatively high and contractors will innovate to reduce the seasonal nature of construction work in an effort to reduce costly over-time wages. All service industries will expand to meet the needs of a rising population and increasing incomes, with the greatest employment opportunities in professional services, finance, insurance, and real estate, business and repair services, and wholesale trade. The implications here are very strong for programs in distributive education in the schools.

Government Employment.

Local government employment will increase more rapidly than employment generally or employment by state and federal governments. Urbanization in Macomb and Oakland Counties will create a demand for public services without a corresponding decrease in government employment in the central city. More leisure time and more disposable income for recreation, and the overdue expansion and improvement of school services will push government employment upward. The ratio of public safety personnel to the total population can be predicted to rise significantly. Post-high school programs will be required to prepare persons for the increasingly complex jobs in public employment.

SURVEY OF MANPOWER NEEDS OF MACOMB COUNTY EMPLOYERS

One of the activities undertaken in connection with this study was the gathering of information from employers as one basis for measuring the needs for occupational education programs. A questionnaire was mailed to 2300 businesses in Macomb County representative of all types of local economic activity. A personal interview follow-up was attempted for employers of 100 or more workers. These two efforts resulted in 516 employer responses. Table L-11 indicates the responding employers by size and type of business. Table L-12 compares the relationship of the survey group to the total employers registered with the Macomb office of the Michigan Employment Security Commission by types of businesses and numbers of employees. While the number of responses is only 17.6% of the total number of Macomb County businesses registered, the number of employees reported is 61% of the total employees registered with the MESC, and the occupational makeup of the sample has a reasonable relationship to the MESC group. Employers were queried as to the number of workers employed, the minimum education required for various occupations, the identification of entry jobs, their future needs for each occupational classification, and their assessment of the adequacy of the local supply of worker in each occupation. Table L-13 indicates the responses most frequently reported by employers for each occupation.

The total occupational categories reported by the responding employers were reduced to 115 for practicality in handling by combining closely related occupations which could not be differentiated by the normal existence of specific pre-employment training programs. An example is the merging of a small reported number of draftsmen with a large group identified as drafting and design technicians. A wide range of occupations was reported by industrial employers under such titles as press operator, punch press operator, drill press operator, rolling machine operator, shear operator, slitter operator, polishers and buffers, secondary machine operator, burring machine operator, and other similar specific descriptions. These operatives were combined into the classification of machine operators so that the significant characteristics of this level of job in local industry could be determined.

Educational Requirements.

Employers varied widely in their assessments of the minimum education necessary for employment in a particular occupation. A few employers indicated that high school graduation is not a requirement for employment even in occupations which are usually only attainable with some post-high school training. Such employers were undoubtedly reporting on the educational status of some persons now in their employ, rather than what they would require of a new applicant, or currently acceptable levels resulting from an extremely tight labor supply. Table L-13 indicates the minimum educational requirement most frequently reported for each occupation covered. On this basis, employers reported 23 occupations open to persons not possessing a high school diploma, 45 available to high school graduates, 20 occupations for which one or two years of technical school are required, 17 occupations for which an apprenticeship is necessary, and 10 occupations open to college graduates. These occupations are identified in Table L-13.

The survey was not designed to measure employment characteristics of occupations for which the college degree is a requirement. The responses that indicated the degree requirement were representative of very small samplings, except for accountants, registered nurses, dieticians, and managers. A significant number of employers indicated college graduation is a requirement for employment in these occupations.

Entry Occupations.

Employers differed in their indications of entry occupations and occupations requiring previous experience. For each occupation wherein a significant number of employers reported, some employers indicated that experience is a hiring requirement. The consensus of all employers was that 42 occupations are entry occupations and 71 occupations require experience. Of the 42 entry occupations

19 are in sales and service
9 are in stenographic and clerical
7 are in manufacturing
3 are in health services
4 are in agriculture

In 32 of these 42 occupations, employers reported an adequate or surplus supply of available workers. Because these appear to hold the most promise for job entry, the ten occupations reported as entry jobs characterized by a short supply of available workers were examined in detail. The significant characteristics of these occupations are detailed in Table L-14.

Table L-14
RANK, EARNINGS, AND EDUCATIONAL ATTAINMENT FOR OCCUPATIONS REPORTED AS ENTRY OCCUPATIONS IN SHORT SUPPLY BY MACOMB COUNTY EMPLOYERS, 1965

Occupation (all data pertain to 1959)	Rank*	Median Annual Earnings**	Median School Years Completed	Percent Employed Full Year**	Percent of Women in Occupation

SERVICE WORKERS EXCEPT PRIVATE HOUSEHOLD				
Practical Nurse	176	2	6	25.0

A small number of employers reported very limited employment of hospital attendants, nurses' aides, platers, steel workers, foundry workers, and farm workers. These are not sufficient indicators that these occupations hold promise for job-seekers. In addition, some jobs in this group are traditionally hard to fill in times of high employment because of their low pay and status, their seasonal nature, or arduous working conditions.

Six employers of fire fighters, an entry occupation, were evenly divided over the adequacy of the available supply of persons to fill these jobs. Law enforcement officers were reported by four employers as in short supply. Pre-employment standards of health, education, and other requirements for fire fighters and law enforcement officers make these occupations unavailable for many job seekers.

Employers of 1126 retail sales clerks reported, by a 28 to 25 margin, that retail sales is an entry occupation, and 25 to 20 that a critically short supply exists in the occupation. The narrowness of these margins of opinion and the looseness of the occupational classification do not permit the pin-pointing of specific job opportunities for the inexperienced. Undoubtedly, many of the available jobs are attractive only to the marginal worker because of the low pay offered. The size of this group makes further detailed examination advisable. Table L-15 indicates those occupations which a significant proportion of employers reported as entry jobs. Table L-16 identifies jobs for which experience is a hiring requirement.

Machine Operators.

The largest single group of employees reported by businesses participating in the Survey of Manpower Needs was reported under the entry machine operator. 95 employers reported that they presently employ 7785 persons in this category. Because of the size of this group and the traditional importance of this occupation as entry employment for young men with few, if any, developed occupational skills, a close scrutiny of all reports on the employment of machine operators was undertaken. The results of this examination are detailed in Table L-17.

Table L-17

SUMMARY OF EDUCATIONAL, HIRING, SUPPLY CHARACTERISTICS OF MACHINE OPERATORS AS REPORTED BY 95 EMPLOYERS, JUNE, 1965

	Totals All Employers Reporting Machine Operators (95)		Operatives Employers Requiring High School Graduation or Less (64)		Craftsmen Employers Requiring Post-High School Education (31)

Total employers will drop	3530		3410		120	
Total employers will add	2600		2325		275	
Net change	- 930		-1085 (-19%)		+ 155 (+14%)	

Two thirds of all employers of machine operators reported that this occupation can be filled by persons possessing a high school education or less. Other employers specified that technical school and/or an apprenticeship is required for employment. On the assumption that employers who require post-high school education and/or apprenticeship for machine operators are in reality reporting skilled machinists and craftsmen, such as jig borer operator, thread grinder, tool maker, or die maker, the 31 returns from these employers were studied separately. A comparison of the information reported on these returns concerning educational and experience requirements, expected future demand, and available supply, supports the assumption that the occupations being reported are highly skilled, rather than semi-skilled. On this basis, these 31 returns were subtracted from the total group identified as machine operators, and the returns for the latter group were re-examined. The newly-defined group of machine operators has a definitely altered profile. The number of operatives covered by the Survey shrinks from 7785 to 5692, with a corresponding increase in the craftsmen occupations. The most significant effect of this re-classification is the disclosure that one-half of the employers of machine operators, identifiable as semi-skilled operatives, do not anticipate a shortage of workers in the occupation. For machine operators, identified as craftsmen by their employers' education requirements, 22 of 24 responding employers indicated a critically short supply of available workers.

While the division of the reported machine operators into operatives and craftsmen on the basis of the educational requirement for entry employment alone is not completely reliable, the employers anticipated needs for these occupations in the five year period, 1965 to 1970 is significant. Employers of the group identified as operatives predict a decline of 19% in the employment of machine operators. The group identified as craftsmen by the significant education required for entry employment is expected to increase by 14%.

Employment Outlook.

When queried as to their expected need for employees during the 1965-70 period, many employers were reluctant to predict their future needs for specific skills. Only one classification, unskilled laborer, was reported as a declining need, 71 occupations were reported as remaining constant in demand, and employment in 39 occupations is expected to increase by 1970. An adequate supply of available workers was reported for 64 occupations, a surplus supply for one, busboy, and a critically short supply for 50 occupations. (Table L-13).

The small return (less than one response from each five employers contacted) to the Survey of Manpower Needs should be considered when viewing employers' needs for specific occupations. Table L-13 does not evaluate the numbers of employees report ' by each reporting employer. Thus the opinion of the employer of three stenographers is tabulated as equal to the opinion of the employer of thirty stenographers. Table L-13 indicates only that response

to each question which was most frequently reported by employers rather than the proportion of all possible responses. This practice is employed to emphasize that the value of the Survey lies in the presentation of generalized collective aspects of local employment, and to discourage the Survey results from being considered in themselves as adequate evidence of the quantitative need for specific occupational education programs.

In assessing the employers' reports, several factors should be noted. The survey was taken at a time of unprecedented high employment which would cause the number of job skills in short supply to be reported rather high. The large number of responses indicating that the need for particular trades will remain unchanged over the next five years seems unrealistic in view of the same high employment factor. Perhaps employers felt that their indication of future need for specific occupations might obligate them should this need fail to materialize. This interpretation is borne out by the cautious nature of some of the written comments about existing occupational education programs in the schools.

Table L-18

EMPLOYERS' EVALUATION OF YOUNG PERSONS WHO APPLY FOR ENTRY JOBS

	TOTAL ALL EMPLOYERS 516	PERCENT OF ALL EMPLOYERS 516=100%	
Most Young High School Graduates are Reasonably Well Prepared for Entry Employment.	157	30.4	
Young High School Graduates Need a Considerable Amount of Additional Education and/or Training Before They Can Perform Satisfactorily.	138	26.7)	49.8
Young High School Graduates are Virtually Unemployable Because They Lack Occupational Education and Training.	119	23.1)	
Did Not Answer	102	19.8	
Do You Find That Employees Who Have Had Occupational Training in High School are Better Prepared for Entry Jobs in Your Firm?			
Yes	225	43.6	
No	61	11.8	
No opinion	72	14.0)	44.6
Did not answer	158	30.6)	

Employers who were contacted by personal interview tended to be more openly critical of school programs than the employers who responded by mail.

Employability of Job Seekers

When asked to evaluate the employability of young high school graduates who apply for jobs, employers indicated, by a 5 to 3 margin, that high school graduates are virtually unemployable or need a considerable amount of additional training for satisfactory employment. Employers reported, by 4 to 1, that persons with high school occupational training are better prepared for employment. Responding employers feel that present school programs are meeting their occupational needs very well, or fairly well, by almost 2 to 1.

Table L-19

EMPLOYERS' OPINIONS CONCERNING OCCUPATIONAL PROGRAMS IN MACOMB COUNTY SCHOOLS

	TOTAL ALL EMPLOYERS 516	PERCENT OF ALL EMPLOYERS 516=100%	
To What Extent do Existing Educational Facilities in Macomb County Meet the Occupational Training Needs of your Company?			
Very well	38	7.4)	29.9
Fairly well	116	22.5)	
Poorly	84	16.3	
No opinion	110	21.3)	53.8
Did not answer	168	32.5)	
If You Think Occupational Education and Training in the Area Need Improvement, Which of the Following Developments Would You Support?			
Strengthening of occupational programs in the high school.	159	30.8	
Area vocational school(s) for high school occupational training.	131	25.4	
Co-op work-study programs.	118	22.9	
More and stronger community college occupational programs.	120	23.3	

The inference can be made that employers are quite frank in criticizing the employability of the high school graduate but reluctant to criticize the schools. A significantly large percentage (53.8), of the respondents do not have, or declined to reveal, opinions as to the adequacy of occupational programs in the public schools. There was fairly uniform support for four suggested means of upgrading occupational education programs at the high school and community college levels.

Table L-20

EMPLOYERS' ADVICE FOR THE IMPROVEMENT OF OCCUPATIONAL EDUCATION IN MACOMB COUNTY SCHOOLS

240 RECOMMENDATIONS FOR PROGRAM IMPROVEMENT	FREQUENCY	PERCENT OF ALL RECOMMENDATIONS 240=100%
Basic education	44	18.3
Specific occupational programs	78	32.3
Economic education	14	5.8
Character traits and attitude improvement	104	43.3

Employers were more emphatic when they offered their own comments about the specific improvements in school programs which are required to upgrade the employability of job seekers. Two of every five recommendations were for education to improve attitudes and basic character, one of every three was for specific occupational programs, and one of five recommended improved basic education. A small number of employers requested economic education so that the new employee would have an appreciation of the free enterprise system.

In-service Training.

Employers were asked which types of formal training programs are being operated for the in-service training of their workers. The answers are detailed by type and size of business in Table L-21.

The most frequently reported training program was apprenticeship, with almost half of the 171 programs reported by manufacturing companies. Employers reported 91 supervisory training programs, and 69 technician training programs. As expected, many employers operate more than a single program. The larger companies (measured by number of workers reported) operate the greatest number of programs, but even the 170 employers of 1 to 10 workers reported 98 training programs. Obviously, these reports indicate nothing about the depth or extensiveness of the training programs. In a few cases wherein small companies reported several training programs, it is reasonable to assume that the definition used for a training program is a very loose one.

One purpose of the Survey was the identification of employers' interest in participating with the schools to serve or upgrade their training needs. The results of this measurement are detailed in Table L-22.

Employers indicated an interest in using the public schools for 234 training programs, or 63.3% of the 370 programs reported. Least interest was reported by employers of 500 or more workers, indicating that these employers are equipped to meet their own training needs, or that satisfactory arrangements with public institutions have been provided already. The positive respondents to this query should be the objective of further inquiry by Macomb County Community College.

Qualification of the Survey of Manpower Needs.

Employer surveys, such as the one taken in connection with this study, have limitations and should be used with caution. Mr. Sol Swerdloff, Bureau of Labor Statistics, United States Department of Labor, speaking at a June 25, 1964 conference, commented on this technique as follows:

> "This method has certain drawbacks. Few companies or other employers devote time to making long-term projections of their activity or manpower requirements, and thus most employers tend to make only a hasty guess when confronted with a request for the number of workers they will need in some future year. Even if all employers guessed correctly, they could not provide the data for firms not now in existence but which will be created in the future. The summation of employers' reports, therefore, has often resulted in projections of manpower requirements which appeared to be unreasonable..."

Many of the returned Survey questionnaires were incomplete, indicating that the information sought was not available, too detailed, or regarded as confidential by the employer. Other returns contained contradictions which indicated that the questionnaire itself was confusing to persons who were desirous of cooperating with the study. The reliability of a completed questionnaire derives from the knowledgeability of the person who is supplying the information. This knowledgeability can only be assumed for mailed-in responses. Financial and manpower resources for this study were too limited to permit extensive personal interviewing of employers. This factor and an apparent apathy of many Macomb employers concerning this study were responsible for the low proportion of responses to the Survey.

The 'moment of time' fallacy must be considered in evaluating the significance of questionnaire responses. June, 1965, during which the employer survey data was collected, was a period of exceptionally high employment. It is a fairly safe assumption that employers' indications of skills needs, and the availability of workers differ markedly from the same measurements taken in June, 1964, or perhaps, June, 1966. It can be assumed, however, that educational and experience requirements, at least as reported, would remain more consistent.

EXISTING VOCATIONAL PROGRAMS AND FACILITIES
IN MACOMB COUNTY HIGH SCHOOLS

VOCATIONAL EDUCATION IN MACOMB COUNTY

Types of Measurements

The survey has undertaken a number of measurements and evaluations of the status and adequacy of the existing vocational education programs and services in Macomb County high schools. A special committee of the Citizens Advisory Committee compiled the first detailed balance sheet ever prepared for any educational curriculum in Macomb County. The complete report of this district-by-district inventory of vocational programs, enrollments, and facilities has been forwarded to the superintendents and vocational directors of the County school districts for their information and use. Data which is of interest and significance to all County educators and the public are summarized below. Summary reports of vocational education reactions and evaluations by students, employers, high school principals, and guidance counselors are also included.

The complete tabulations of the survey of Macomb County's 1965 senior class are included in this report because the responses of these students convey strong implications of needed improvements in school programs and services. This is the first County-wide attempt to solicit students' opinions as one basis for the evaluation of school services. Responses are separately reported by students' sex, types of school attended, students' programs of study, and students' indications of academic ranking. These reports deserve the careful study of County school administrators, teachers, and counselors.

Conclusions

From these survey activities and data from State reports on vocational enrollments and reimbursements in Macomb County, a fairly accurate picture of local efforts in vocational education can be drawn. In summary, these sources indicate that Macomb County vocational education efforts compare favorably with vocational education in other counties in Michigan, but can only be described as inadequate, when compared to the needs of a large proportion of Macomb County high school students for such training. Reports filed with the State Department of Education by Macomb County school districts indicate that 63.5% of the 1964 County high school graduates did not enroll in four-year or two-year colleges or in business or trade schools. This large proportion of graduates who leave high school to enter directly into the work force is double the number of persons who prepared for employment through a high school vocational program, and five times the number of Macomb County students who are enrolled in a vocational program which meets the minimum state standards for re-imbursement.

Costs of Vocational Education.

Vocational education programs are among the most costly services which the public school is expected to provide. The more sophisticated programs and the specialized terminal portions of vocational programs are costliest. The explanation for the underdevelopment and low enrollments in vocational programs which meet the State-determined standards for reimbursement is found in the examination of the financial condition of Macomb County school districts. Graph V-1 illustrates the most significant financial problem which affects Macomb County school districts. The school age population increase of most County districts has been so large that serious dislocation has resulted for the local district's ability to maintain the standards of its educational programs. For the five-year period 1959-64, 19 of the 21 local school districts experienced a reduction in the tax base, when measured as the State Equalized Valuation per membership child in the district. In most of these districts, the loss in tax base per membership child has been roughly proportional to the increase in memberships during the 1959-64 period.

One purpose of state and federal-derived support for vocational education programs is to encourage greater local effort to provide such programs. However, financially-pressed districts frequently cannot participate in the reimbursement. School districts which have the local financial resources to provide vocational facilities and to hire vocationally certifiable teachers are thereby enabled to qualify for reimbursement of vocational programs. A comparison of the per capita operating costs of Macomb County school districts (Graph V-2) and the vocational programs reimbursement per student enrolled in grades 11 and 12 (Graph V-3) illustrates this relationship. Only two County districts with per capita operating costs below the median for all County districts in 1964-65, received vocational reimbursements at per capita rates above the median for all County districts. In both of these schools, extremely small 11th and 12th grade enrollments caused the reimbursement of a single modest vocational program to reflect this apparent affluence. The two County districts with per capita expenditures significantly above County-wide levels also receive vocational reimbursements at per capita level well above the other County districts. It is likely that local educational leadership in these districts is partly responsible for higher levels of local education expenditures and for vocational education programs which achieve higher rates of reimbursement.

Complicating the problems for local districts which result from the County's position as the fastest-growing county in Michigan is the extent to which the balance of total public school costs have been shifted from state-derived support to local resources during the ten-year period from 1954-55 to 1964-65. Graph V-4 illustrates this situation as it affects all of Michigan's school districts. The local district's share of financing the public schools increased from 38% in 1954-55 to 50.2% in 1964-65, while the state share decreased from 57.7% to 46.4% over the same period. Table V-5 indicates that state support per student has been raised by the Legislature during recent years, but not on a scale which is in proportion with the increasing costs of providing public education.

*Estimated

Increases in state aid have been reduced in effectiveness by legislative exemption from full local taxation of the personal and real property of special groups such as veterans, elderly persons, and manufacturers. The State Tax Board has required changes in assessing practices which are reducing the tax base in some school districts.

Graph V-6 indicates the sources of funds for local programs of vocational education in Michigan for the biennium, 1962-64.

State support for vocational education in the local districts equalled or surpassed federal support from 1949-50 to 1959-60. Since the latter year, however, state support has remained virtually unchanged, while federal funds have increased.

Vocational Enrollments

A major obstacle to efforts to summarize numerically the extent of vocational education in Macomb County is presented by the widespread confusion over the definition of the term "vocational education". Both the broad and narrow outlines of the topic are found in Guidelines for Establishing Trade and Technical Education Programs.[1]

> Vocational Education
>
> Education designed to develop skills, abilities, understandings, attitudes, work habits and appreciations, encompassing knowledge and information needed by workers to enter and make progress in employment on a useful and productive basis. It is an integral part of the total education program and contributes toward the development of good citizens by developing their physical, social, civic, cultural and economic competencies.

[1]Lynn M. Bartlett, (Division of Vocational Education Department of Public Instruction; Lansing, Michigan, 1965) Bulletin No. 2147.

SOURCES OF FUNDS USED FOR LOCAL PROGRAMS OF
VOCATIONAL EDUCATION IN MICHIGAN FOR THE BIENNIUM, 1962-64

Reimbursable Vocational Program

A class or curriculum offered through a public school or teacher-training institution which is organized and conducted in accordance with the provisions of the State Plan for Vocational Education approved by the United States Office of Education. Such programs are eligible to receive funds from the state (from state and federal vocational education appropriations) to cover, in part, certain costs already incurred.

Under the above definition for Vocational Education, student enrollments in homemaking, and single or unrelated courses in industrial arts or vocational subjects can be included in the measurement of vocational education enrollments. This broad definition has been applied by many Macomb County administrators in their contacts with Survey personnel. Local directors of Vocational Education, however, usually adhere to the narrower limits of Reimbursable Vocational Programs as their definition of Vocational Education.

Vocational directors are oriented toward the conceptions of Vocational Education which have become traditional since the passage of the Smith-Hughes Act in 1917. Reimbursement under Smith-Hughes required that the following standards be met:

1. Vocational certification of the instructor.

2. Relatedness of the course to a specific occupational area within the Smith-Hughes spectrum of agriculture, trade and industry, office, and distributive education.

3. Length of the daily instruction period (2 hours daily minimum in shop classes and 1 hour of related instruction).

Under the 1965 Michigan State Plan for Vocational Education, the requirements for teacher-certification have been liberalized, the occupational areas have been broadened to include programs in any occupations excepting the professions, and the instructional time requirements have been opened to a more liberal interpretation. Under the new Plan, vocational program students are required to identify with a specific occupational goal. It remains to be demonstrated whether local vocational educators or the State Division of Vocational Education will change their thinking and policies significantly from the traditional Smith-Hughes concepts.

Under the latitude provided by these differing definitions of Vocational Education, it is not surprising that vocational enrollments are reported by high school principals as ranging from 13 to 63 percent. Senior boys reported a range of 6 to 32 percent for vocational enrollments in the 22 public high schools in Macomb County. The corresponding range of vocational enrollments reported by public high school girls was from 30 to 57 percent. The high vocational enrollments for girls results from the popularity of office occupations programs. Table V-7 indicates vocational enrollments by schools.

V-7

VOCATIONAL ENROLLMENTS AS INDICATED BY
MACOMB COUNTY PUBLIC HIGH SENIORS, May, 1965

High School	Percents Boys	Girls
Anchor Bay	12	42
Armada	17	30

Van Dyke	22	47
Warren Cousino	31	44
Warren High	24	40

Table V-8 indicates Macomb County high school enrollments in reimbursed vocational programs in 1963-64 and 1964-65. Approximately one of every eight Macomb County 11th and 12th grade students is enrolled in a reimbursed vocational program.

V-8

ENROLLMENTS IN REIMBURSED VOCATIONAL PROGRAMS
IN MACOMB COUNTY HIGH SCHOOLS

	1963-64	1964-65	PERCENT OF CHANGE
Trade and Industry	1011	944	- 6.6
Distributive	266	312	+17.3
Office	331	381	+15.1
Agriculture	118	138	+16.9
County, excluding Homemaking	1726	1775	+ 2.8
Homemaking	3781	3893	+ 3.0
County Totals	5507	5668	2.9

It will be noted that homemaking enrollments and reimbursements have been extracted before certain measurements of vocational programs have been made. This is not an attempt to downgrade or eliminate homemaking, for this curriculum area has excellent educational values. It was deemed proper, however, to extract homemaking data from vocational education data in order to present an accurate picture of vocational education in Macomb County. Homemaking, as it is presently offered in Macomb County, is general education, rather than vocational (i.e., oriented toward the development of specific employable skills which can be exploited in the local labor market).

Table V-9 compares vocational enrollments in four regions of Macomb County. The regions have been identified as one logical pattern for the establishment of the proposed Area Occupational Education Centers. The South West Area which includes 27.6% of 11th and 12th grade enrollments receives 44.2% of all vocational reimbursements in Macomb County.

Vocational Certification.

Graph V-10 indicates the distribution of the 83 vocationally certified teachers in Macomb County high schools by program areas.

V-10

CERTIFICATION OF VOCATIONAL TEACHERS

MACOMB COUNTY PUBLIC HIGH SCHOOL PRINCIPALS' VIEWS ON VOCATIONAL-TECHNICAL EDUCATION

High school principals exert considerable influence upon the direction of secondary education. Not only are they in the best position to know all aspects of their schools, but their opinions and attitudes very often translate into procedures, policies, and programs. The responses of each of the twenty-two public high school principals in Macomb County to questions measuring present vocational programs and the need for improved programs were obtained through personal interviews.

Dropouts.

Students in the 10th, 11th, and 12th grades of Macomb County public high schools who dropped out of school during the 1964-65 school year, including those who completed the year but neither graduated nor returned in September, 1965, total 1430. This is 6.34% of the total who enrolled in September, 1964. Projecting the same dropout rate for three years to cover the span of grades 10 to 12 indicates that 19.1% of the students entering grade 10 do not complete grade 12. While this is a single year measurement, the conclusion is comparable to the findings of more sophisticated studies of dropout rates taken nation-wide.

Program Enrollments.

According to the high school principals, 11th and 12th grade students are divided among the three programs of study as indicated:

College Preparatory	37%
General	31%
Vocational or Occupational	32%

Vocational Program Costs.

Principals were asked "What is the cost, in your school, of vocational education as compared to general education?" Answers were recorded as the ratio of vocational education costs to general education costs. Twenty respondents indicated that vocational education is more expensive. The most frequently expressed opinion was that vocational education is 1½ times as costly as general education; five principals thought vocational education is twice as costly.

COST OF VOCATIONAL EDUCATION
COMPARED TO COST OF GENERAL EDUCATION
Estimates of 21 Macomb County High School Principals

Expense Ratio	No. of Responses
1 to 1	1
1½ to 1	11
2 to 1	5
2½ to 1	3
3 to 1	0
More than 3 to 1	1
No Opinion	1

Present Programs.

Principals were asked to rate the adequacy in their schools of fourteen various services, programs, or activities which are closely associated with vocational education. The composite responses below indicate that principals believe considerably more attention should be given to these aspects of the high school program.

PRINCIPALS' RATING OF VOCATIONAL SERVICES IN MACOMB COUNTY PUBLIC HIGH SCHOOLS 1965

Rating scale
(4) Exceptionally good
(3) Adequate
(2) Less than adequate
(1) Very poor
(0) Not being done

Most high schools are providing counseling personnel at a ratio of one counselor for each 300 students which is the minimum recommended by accrediting agencies. While there are several factors which determine a student's course of study, and no one factor is applied to the exclusion of the others, most principals indicated that the student's own choice has more weight than either the choice of his parents or the recommendation of the school.

Two-thirds of the principals stated that staff personnel, usually counselors, are assigned to contacting students who drop out of school. Such contacts are confined, however, to those students who indicate their intent to leave school before actually leaving. There is little evidence that students who leave without giving prior notice are contacted other than to confirm their status. Students who give notice of their decision to leave school are encouraged to remain in school.

Principals indicated that all schools perform some placement of their graduates, but only one of the 22 schools has a formalized placement service. In most situations students are referred, generally through a member of the counseling staff, upon requests from employers. Only one of the high schools provides placement services during the summer months.

Program Expansion.

Principals are of the opinion that many of the students enrolled in college preparatory and general programs would benefit by enrollment in one of their present vocational programs. An average of all responses indicates that 25% of those not on vocational programs would benefit by participation in a vocational program that presently is being offered.

There was a wide divergence of opinion regarding the numbers of students the high schools could prepare for meaningful job entry by expanded use of existing facilities. A few high school principals indicated that their present facilities are utilized to capacity. Others stated that the use of facilities could be expanded, but that vocational teachers were unavailable. About half of the principals indicated that their present facilities could accommodate expansion of some programs of vocational education.

In none of the schools were all vocational laboratories in use, for vocational instruction only the entire school day. While some laboratories are adaptable to regular academic instruction, other facilities such as machine shops, drafting rooms, and graphic arts laboratories may be used practically only for their specific purposes. Vocational-technical laboratories are utilized for vocational instruction about 70 percent of the school day.

There is more intensive utilization of vocational teaching personnel than of vocational facilities. Vocational teachers frequently have other teaching, supervisory, or preparatory assignments in addition to their vocational classes. The survey indicates that vocational teachers are engaged in teaching vocational subjects about 85 to 90% of their "in-class" time.

Adequacy of Student Preparation.

When asked what proportion of their graduates leave school without adequate preparation for further education or for direct employment, the principals' answers were as high as 80% with an average of 21.1%. The wide range of answers indicate differing personal philosophies of the purposes of high school education rather than differences in the quality of education among the schools. Every principal agreed that at least some of his students are graduating without adequate preparation for his next step in life.

If a wider choice of vocational programs were available, principals believe such programs would benefit over one-third of those students presently enrolled in non-vocational programs.

Means of Improving Vocational Education.

When asked how Macomb County high schools should conduct programs in vocational education, 15 of 22 principals favor area vocational schools providing a much wider choice of programs than local schools are able to offer. The responses were as follows:

	No. of Responses
Within the individual schools for their own students	1
Through area vocational high schools which would enroll selected students on a full-time basis	1
Through area--vocational high schools which would share the students time with the home high school on a half-day, alternate week, or other arrangement	15
Through the County Community College	2
By sharing students, programs and facilities among neighboring districts-a decentralized arrangement.	2
Other - describe	0

With the exception of one high school, credit requirements for graduation are the same for all students, regardless of program. However, in practice, the vocational program student may be required to attend school for more class hours daily. This increased attendance is required to meet both the minimum academic credit requirements for graduation and the minimum class hours of participation for reimbursement of the vocational program. Two Macomb County schools extend the daily schedule by one hour to meet the needs of students in vocational programs.

In an effort to determine local impact of the Vocational Education Act of 1963, principals were asked if new vocational programs had been initiated that could be attributed to the Act. Eight high schools have developed new programs primarily because of the financial assistance which the Vocational Act of 1963 provides. All are larger schools in the southern half of Macomb County.

VOCATIONAL GUIDANCE

Preliminary to the full effectiveness of vocational programs and facilities within the school is the student's identification of attainable and satisfying personal career goals. The adolescent needs assistance in identifying the relationship which exists between his own pattern of aptitudes and interests and the pattern required for effective performance in an occupation. This assistance cannot begin too early, for as Baer says, "From childhood on, individuals need an organized program of counseling and group processes designed to help them assess the meaning of occupational experiences and project new experiences for further testing . . . Occupational experience is an essential part of an individual's orientation and induction into his culture".[1] Only after the student has established for himself what he wants to achieve can the available educational opportunities be fully utilized.

Vocational goals need not be permanent and persistency of goals is not necessarily a virtue. A study of 507 Merit scholars indicated that almost one half of the total group changed their vocational choice between the senior year of high school and the junior year of college. It should be the purpose of the school to encourage the student toward more realistic choices as he learns more about his own abilities and more about occupational choices. Goal-oriented high school students can be programmed into the most appropriate course of study available within the school. Students possessing vocational goals characteristically perform better academically, and are less likely to terminate school before successful completion.

There is little evidence of success on the part of schools in identifying the student with a vocational goal of his own choosing. Results of a recent survey[2] covering 440,000 students in high schools throughout the United States indicate that the great majority of young people do not make an appropriate choice of career while attending high school. Of the 5078 high school seniors responding to a questionnaire of the Macomb Occupational Education Survey, 24.1% did not identify themselves with the college preparatory program or a vocational program. Of the total students reporting to the Macomb survey, 62% indicated that they had received little or no help in high school in making post-high school plans. In both surveys the problem of non-direction was found to be most acute with the general program student. In Macomb County, 75 percent of the general program students reported little or no help in planning what to do after high school. If the high school general program has values, these are not evident to the students. Only 35 percent of the general program students said their school program fit their future goals.

---

[1]Max F. Baer and Edward C. Roeber, Occupational Information, (Chicago, Science Research Associates, Inc., Chicago, 1964) p.46.

[2]Project Talent.

The corresponding figure for the college-bound was 77 percent, and for the business students, 71 percent. These figures indicate that vocational guidance service in the school must be expanded and upgraded.

Dr. James B. Conant, in speaking before the "Conference on Unemployed, Out-of-School Youth in Urban Areas", stated that "This expansion of the school's function will cost money and will mean additional staff -- at least a doubling of the guidance staff in most of the large cities; but the expense is necessary, for vocational and educational guidance must be a continuing process to help assure a smooth transition from school to the world of work."

In order to assess the present state of vocational guidance in Macomb County high schools, guidance counselors were requested to supply information to the Survey. Of the 65 counselors indicated as being on the staffs of the public senior high schools of Macomb County, 33 responded to a questionnaire from the Survey.

The responses to the question "Circle the level of education that applies to you" were as follows:

70% indicated possession of a masters degree or more incounseling and guidance

21% indicated having a masters degree in education with some graduate course work in counseling and guidance

9% indicated they did not have the masters degree but had some graduate work in counseling and guidance

The number of students assigned to each counselor varied from 250 to 600. The average student load per counselor was 332. The most frequent (modal) response was 300 students per counselor. Student reaction to the adequacy of vocational guidance service, reported below, indicates that a siginificantly smaller ratio, perhaps 150 students per counselor, deserves serious consideration.

The effectiveness of the counselors' services is proportional to the amount of time they have available for counseling. Counselors indicated the following time utilization:

	Average
Counseling	55%
Administration	9%
Teaching	11%
Clerical Work	22%
Other	3%

Based upon a 180 day school year, with seven in-school work hours per day, application of the above counseling rate of 55% would permit 693 counseling hours per year, or 2.1 hours per student yearly. Obviously, not every student receives this amount of personal counseling, nor is this an adequate measure of the need of many students for counseling services.

In the utilization of available counseling time, counselors indicated the following ranking of effectiveness in dealing with student problems.

COUNSELORS' INDICATION OF EFFECTIVENESS
IN DEALING WITH STUDENT PROBLEMS

Problem Area	Degree of Effectiveness (percent of responses)			
	1	2	3	4
Counseling on School Problems	18	47	22	13
Counseling on Personal Problems	26	17	22	35
Counseling on Vocational Choice	9	22	43	26
Counseling on College Education	52	17	9	22

1 = most effective
4 = least effective

In the significant area of vocational choice, 9% of the counselors felt they were most effective and 26% felt they were least effective.

A similar evaluation of counseling services was asked of the high school seniors. Comparison of their ratings with that of the counselors reflects some interesting similarities and differences:

COMPARISON OF SENIORS' AND COUNSELORS' RATING OF
COUNSELING EFFECTIVENESS IN STUDENT PROBLEM AREAS

	Seniors	Counselors
Counseling on School Problems	4	1
Counseling on Personal Problems	1	3
Counseling on Vocational Choice	3	4
Counseling on College Education	2	2

1 = most effective
4 = least effective

These comparisons indicate that counselors and students agree that counseling on vocational choice is least effective, and that counseling on college education is adequate.

The confidence expressed in the quality of counseling on college education is not surprising and results from a relative harmony of factors:

* Counselors have extensive personal experience in the area of college matters.

* The high school program is generally suitable to the attainment of the college-entry goal.

* The student has established his immediate goal -- college education.

The non-college bound are not so fortunate. These students are less apt to have determined their career goals. (24.1% of 1965 Macomb County seniors indicated their school program as 'general'.) Counselors are on less certain ground when advising on vocational choices and employment opportunities. Reliable information about job opportunities in non-professional occupations is not readily available, nor is information as to what school training will open up these jobs to the high school graduate. Even when the counselor has such information, the school may not be able to provide the recommended educational experiences. The local findings are reinforced by information extracted from a nation-wide survey of high school students taken by Purdue University. In the Purdue poll, high students indicated by a 7 to 1 margin that the high school programs favor the college-goer over the non-college bound student. Students indicated that the vocational programs were most in need of upgrading.[3]

The Survey reviewed the testing programs utilized in Macomb County junior high schools to determine the extent to which standardized interest tests are used as one basis for assisting the student to make a high school program choice compatible with his interests and aptitudes.

STANDARDIZED TEST USED IN MACOMB COUNTY GRADES 7 to 9

Types of Tests	Districts Using	Frequency
Intelligence Tests	20	31
Scholastic Aptitude Batteries	20	27
Scholastic Achievement Tests	20	45
Interest Inventories	5	5
Total		108

There is extensive use of standardized tests in grades 7, 8, and 9. It is significant, however, that interest inventory testing comprises only 5% of the total testing program and is offered by only 5 of the 21 public school districts. No testing of non-scholastic aptitudes is undertaken as a part of the normal testing program.

High school counselors indicated that the results of standardized tests are used in counseling students for vocational and academic choices. Counselors reported that students are informed of test results, and in some cases, parents are also advised of test findings. Most counselors are reasonably satisfied with the extent of their current testing program. A few counselors professed the opinion that the amount of test data was excessive compared to the time available for its practical utilization.

Counselors in districts which do not have testing specialists on the regular staff indicated the desirability of adding such personnel.

---

[3] Youth's Attitude Toward School, Teenage Employment Problems, and Women Working, Measurements and Research Center, Purdue University, Lafayette, Indiana, January, 1965. p. 4.

The Macomb County survey of high school seniors indicates that the majority of non-college bound students fail to develop appropriate educational and occupational goals. Two-thirds of the general program students indicated their intent to go directly to work after high school, yet they were not preparing for this in a vocational program. Counselors indicated the following obstacles to the development of goals by the non-college-bound student. These responses are listed in the order of frequency reported:

1. Counselors lack the time to work adequately with students.

2. The attitudes of the community and the school emphasize the needs of the college-bound student.

3. The college-bound students form a "peer" group and to be identified as non-college bound may be considered an admission of failure.

4. Some students are under parental pressure to attend college regardless of their scholarship.

5. Students lack understanding of the various occupational fields and have no frame of reference on which to base a vocational decision.

6. Adequate vocational programs and facilities are not available.

7. Counselors do not have reliable information as to current employment opportunities and future employment trends.

Recommendations

It is recommended that the exploratory function of the junior high grades be re-identified, broadened, and emphasized. Industrial arts, homemaking, music, art, and other programs which provide opportunities for vocational and career exploration, should be widely available, imaginatively developed, and creatively taught. Opportunity should be provided for the child to discover his own interests and aptitudes through school experiences.

It is recommended that every student should have the benefit of interest and aptitude testing and the interpretation of the results of such tests prior to the selection of his high school program. Every student should be fully informed of the nature and purposes of the high school programs which are available to him.

It is recommended that efforts be made to identify each potential early school-leaver and to provide testing, remedial, and counseling services which will improve the potential school-leaver's chances for retention and success in a school program appropriate to his abilities and interests.

MACOMB COUNTY SENIORS BY CURRICULUM, 1965

PLANS AFTER GRADUATION

COLLEGE PREP

GENERAL

VOCATIONAL

RESPONSES TO SELECTED QUESTIONS BY MACOMB COUNTY
HIGH SCHOOL SENIORS GROUPED BY PROGRAMS OF STUDY
May, 1965

Seniors in Macomb County public and parochial high schools were polled by the Survey staff in May, 1965 to determine their occupational goals and their opinions of high school opportunities. Returns were received from 5078 of the 6500 seniors. This is a 79% return. Some significant findings from the questionnaire are pointed out below: the complete results are included at the end of this report.

Programs of Study and Post-High School Plans.

Macomb County high school enrollments by program have remained remarkably stable over a three year period as seen by comparing the results of similar surveys conducted by Macomb County Community College in 1963 and 1964 to determine high school students' plans for further education. An analysis of the three yearly surveys reveals the following information:

SENIOR STUDENTS' IDENTIFICATION
OF THEIR HIGH SCHOOL PROGRAMS

Year	College Prep	Commercial	Shop	General
1963	45 %	24 %	7 %	24 %
1964	43.5%	24.5%	9 %	23 %
1965	43 %	23 %	9.5%	24.5%

The proportion of students enrolled in the general program remains constant despite heavy publicity being given to the importance of specific skills for entry employment. Vocational enrollments in the County appear to be unrealistically small when one considers that 40% of all employment in the Detroit area is in manufacturing, and 25% in clerical and sales occupations.

College preparatory enrollments have not increased during the period despite the nation-wide trend toward greater college attendance. College preparatory programs enroll one-third more Macomb County high school students than actually go to college upon high school graduation.

HIGH SCHOOL PROGRAMS OF STUDY--BOYS

	% College	% General	% Commercial	% Shop	% Other
Total	47.8	26.9	8.2	14.0	3.1
Public	47.2	26.6	8.3	14.7	3.2
Private	56.2	36.2	7.2	2.7	1.3
Top 1/3	87.5	5.6	2.7	2.8	1.8
Middle 1/3	41.1	27.8	9.6	17.9	4.6
Bottom 1/3	17.0	51.1	11.5	17.2	4.2

The nature of the entry employment opportunities for boys in the Detroit area raises questions of whether boys are taking high school programs which will help them to obtain jobs. College preparatory and general programs which enroll three-fourths of all boys offer little opportunity for the development of specific occupational skills.

1. One-fourth of all boys are neither preparing for college nor for any specific occupation. This is more than half of the public and three-fourths of the private school boys who are not planning on college. Seven of every ten boys are hopeful of apprenticeship or other on-the-job training--an unrealistic goal in view of the limited numbers of apprentices in training and the high entry qualifications.

2. Very few boys, regardless of academic rank, display an interest in the commercial program of study. It seems likely that boys view commercial studies as being "feminine" and are reluctant to identify with these studies. This is unfortunate in view of the opportunities in business, banking, and industrial offices, as well as in sales and sales-related jobs.

3. Only 20 students of the 5,078 total named agriculture (included in "other") as their high school program of study.

4. Lack of adequate vocational programs undoubtedly causes many boys to enroll in college preparatory or general programs.

HIGH SCHOOL PROGRAMS OF STUDY--GIRLS

	% College	% General	% Commercial	% Other
Total	37.4	15.7	43.2	3.7
Public	36.8	15.4	44.0	3.8
Private	44.3	19.0	33.7	3.0
Top 1/3	70.8	2.8	24.1	2.3
Middle 1/3	23.6	18.6	53.7	4.1
Bottom 1/3	10.0	36.7	47.6	5.7

1. More girls than boys select a high school program designed to prepare the student for employment.

2. The commercial program obviously has greater appeal to girls than the "male" vocational programs have to boys. The enrollment of 43% of all girls in a commercial program results in a smaller enrollment of girls in both college preparatory and general programs.

3. Home economics (included in "Other") has little appeal for girls in terms of an occupational future. Only 18 girls in the county indicated home economics as their program of study, apparently because they perceive home economics, as it is presently organized, as general rather than vocational education.

Interest in Vocational Programs.

Senior students were asked, "Would you have taken a vocational course of study if a wider choice of these programs had been available when you entered high school?" When grouped according to their own indication of academic placement in the top, middle, or bottom third of their class, students' responses indicate that:

1. The top third of the boys and girls are most satisfied with their present selection of program. Eighty percent of these students identify themselves as on a college preparatory program.

2. Sixty percent of all students expressed the opinion that they definitely, or probably, would have taken a vocational course of study if a wider choice of programs had been available when they entered high school. This group includes virtually all of those who actually did follow a vocational program and three-fourths of the students who consider themselves in the lowest third academically.

3. Of the 1,074 students on the general program, 813, or 75%, indicated they definitely or probably would have chosen an occupational course of study if the choice had been wider.

4. Private school boys indicated greater interest in vocational training than did public school boys.

Other factors besides the lack of variety of vocational programs undoubtedly contributed to this dissatisfaction. Other factors might be:

a) A lack of concern regarding employability until too late. Evidence of this is expressed in students' responses to the question "Why did you choose the course of study which you have followed in high school." Over one-fourth of the general program students answered "My friends were taking this program," or "This program seemed easiest to me."

b) A lack of information about labor market trends, what employers seek in the way of educational background, and an understanding of their own aptitudes and abilities.

c) The scarcity of vocational programs in which students of low academic ability can succeed.

Plans After Graduation.

The number of high school seniors who actually attend college is hard to determine without adequate follow-up studies of graduates. Much of the present school program is justified by identifying a large proportion of the high school population as college-bound. This identification is, in some degree, based upon students' expressed intent while still in high school.

1. In answer to the question "Do you plan to attend a college or university?," 2151 Macomb seniors responded "Yes, definitely," and 688 responded "Probably so." These two groups total 2839, or 49.7% of the seniors polled.

2. In answer to the question "What do you plan to do on a full-time basis the first year after high school graduation?," 2253 listed attendance at college or university, business college, or trade or technical school as their plans. Thus, 39.4% of the total group has immediate plans for some type of post-high school education. In the light of past evidence, it is unlikely that this proportion of Macomb seniors will enroll in post high school institutions within a year of completing high school. Reports filed with the State Department of Education indicate that 31.6% of Macomb public high school graduates for the past three years have enrolled in a junior college, college or university.

3. Of the seniors who plan to go to college, (including some who plan to attend college eventually, but not immediately), 40.3% expressed an intention of attending Macomb County Community College, 46.8% plan to attend other colleges or universities, and 12.9% intend to enter trade, technical, or business schools. The 46.8% planning to attend four year institutions include a sizeable, but undetermined, number of seniors who indicated that they plan to attend both Macomb Community College and a four year college.

4. While one-fourth of all seniors plan on attending Macomb County Community College, only 16% of the boys and 20% of the girls in the top third of their class expect to do so. In the middle and lowest thirds over 50% of those planning to attend college plan to enroll at Macomb County Community College. More than a fourth of all students identifying themselves in the bottom third and desiring further education, indicate that they plan to enroll in a technical, trade, or business school.

5. Almost half of all Macomb high school graduates expect to go directly to work. Fewer than one-fifth of the top third academically plan on seeking jobs; while two-thirds of all other students are included in the job seekers.

6. Full-time employment after graduation will be sought by 42.3% of the boys and 53% of the girls. Yet high school vocational programs enrolled only 22.9% of all boys and 43.8% of the girls.

Student Opinions.

In order to provide Macomb high school counselors and teachers some indication of students' relative assessment of the school curriculum and guidance services, nine areas were rated by students. Commercial and college preparatory students were generally satisfied that the school had adequately prepared them for their future careers. Fewer than half of the general students were in agreement.

SENIORS RATINGS OF HIGH SCHOOL PROGRAMS AND COUNSELING SERVICES

	% Excellent	% Good	% Poor
School Problems	16.4	57.9	25.7
Personal Problems	61.2	22.0	16.8
Vocational Choice	18.5	54.9	26.6
College Education	27.0	52.1	20.0
Library Materials	16.7	54.6	28.7
Courses Offered	9.4	65.3	25.3

1. Macomb high school seniors judged their counselors to be most successful in the area of personal problem assistance. The only exception is private school girls, 30% of whom felt this assistance was poor.

2. While over half of the students rated counseling on vocational choice as good, only 18.5% rated it excellent, and 26.6% rated the service as poor. Library materials and information on vocations received comparable ratings.

3. Private school boys were the least satisfied with counseling services.

4. "Courses offered" received an excellent rating from only 9.4% of the seniors. Only 2.7% of private school boys rated the courses as excellent.

Environmental Factors.

FATHERS' EDUCATION

	% College	% Commercial	% Shop	% General	% Other
Less than high school	36.8	55.2	64.7	54.4	49.2
High school	27.8	28.0	29.4	27.3	32.2
College graduate	12.8	3.7	----	3.9	6.5

1. 47.3% of the fathers are not high school graduates. Only 7.7% graduated from college. Of the college preparatory students, 13% of the fathers are college graduates. 3.7% of the general students' fathers are college graduates.

2. 70% of the boys and 50% of the girls had part-time jobs while in school; 78% of the boys in the bottom third and 72% of the boys in the middle third had part-time jobs.

IF YOU PLAN TO GO TO COLLEGE, WHERE DO YOU PLAN TO ENROLL?							
Macomb County Community College.	40.3	43.0	37.0	43.4	37.6	37.7	31.2
Other college or university.	46.8	44.4	49.7	44.3	49.5	45.3	52.0
Technical, trade, or business school.	12.9	12.6	13.3	12.3	12.9	17.0	16.8
WHAT DO YOUR PARENTS FEEL ABOUT WHETHER OR NOT YOU ATTEND COLLEGE?							
Insist or expect you to go.	21.7	28.9	15.0	28.6	15.1	30.6	12.2
Want you to go if you want to.	62.8	58.3	67.0	58.4	66.1	58.5	77.2
Don't care one way or the other.	10.2	8.6	11.8	8.7	12.3	6.8	6.1
Don't want you to go.	1.4	0.7	2.0	0.7	2.1	0.7	1.0
Won't allow you to go.	0.4	0.3	0.5	0.4	0.5	0.0	0.5
Don't know what they think.	3.5	3.2	3.7	3.2	3.9	3.4	3.0
Answer the following questions ONLY if your future plans include "NOT" or "PROBABLY NOT" going to college as indicated in a previous question.							
WHICH OF THE FOLLOWING TYPES OF TRAINING OR EDUCATION INTEREST YOU MOST?							
Paid apprenticeship as a helper to learn a trade.	22.7	41.4	7.2	41.8	7.4	35.3	4.3
On-the-job training with a company or industrial firm.	36.8	28.0	44.0	28.3	43.6	23.5	49.3
Correspondence study.	2.1	1.6	2.5	1.6	2.5	2.0	2.9
Post-graduate high school work in high school at night.	2.7	2.5	2.8	2.7	2.8	0.0	3.0
Adult education classes.	3.4	1.1	5.3	0.9	5.1	3.9	7.2
Military service or training.	5.3	10.6	1.1	10.3	1.2	15.7	0.0
None of the above.	27.0	14.8	37.1	14.4	37.4	19.6	33.3
WHAT IS THE MOST IMPORTANT REASON WHY YOU DO NOT PLAN TO GO TO COLLEGE?							
Tired of school.	14.8	21.1	10.4	20.8	10.5	24.4	9.5
Want to work and make money.	22.8	18.5	25.8	18.6	25.6	17.8	28.6
Can't afford it.	15.6	16.0	15.3	16.4	15.6	11.2	12.7
Parents don't want me to.	1.0	1.0	1.0	0.9	1.1	2.2	0.0
Can be just as successful without going to college.	1.1	1.6	0.8	1.2	0.7	6.7	1.6
Couldn't make good enough grades.	22.8	29.0	18.4	28.8	18.5	31.1	17.5
Want to get married.	9.3	2.5	14.1	2.7	14.6	0.0	6.3
Other.	12.6	10.3	14.2	10.6	13.4	6.6	23.8
WOULD YOU GO TO COLLEGE IF YOU HAD ENOUGH MONEY?							
Yes.	19.0	24.3	14.9	25.2	14.7	10.4	17.4
No.	42.8	35.1	48.7	34.9	48.6	37.5	49.3
Maybe.	38.2	40.6	36.4	39.9	36.7	52.1	33.3
IF YOU ANSWERED "YES" OR "MAYBE" YOU WOULD GO TO COLLEGE IF YOU HAD ENOUGH MONEY, HOW MUCH WOULD YOU NEED?							
Enough to pay all expenses ($1,200 to $1,500 per year.)	48.2	50.2	46.2	50.4	45.2	46.9	58.8
Enough to pay half of the expenses ($600 to $750.)	40.9	39.1	42.6	39.2	43.6	37.5	29.4
Enough to pay some but less than half of the expenses.	10.9	10.7	11.2	10.4	11.2	15.6	11.8

Answer the following questions ONLY if your future plans include "NOT" or "PROBABLY NOT" going to college as indicated in a previous question.							
WHICH OF THE FOLLOWING TYPES OF TRAINING OR EDUCATION INTEREST YOU MOST?							
Paid apprenticeship as a helper to learn a trade.	70	47	92	1	1	177	9
On-the-job training with a company or industrial firm.	350	63	50	3	5	160	12
Correspondence study.	13	5	0	1	0	17	1
Post-graduate high school work in high school at night.	21	6	4	3	0	12	1
Adult education classes.	29	7	3	0	2	15	3
Military service or training.	18	15	9	1	0	47	4
None of the above.	202	86	11	0	6	158	9
WHAT IS THE MOST IMPORTANT REASON WHY YOU DO NOT PLAN TO GO TO COLLEGE?							
Tired of school.	74	33	20	1	3	87	9
Want to work and make money.	193	24	21	1	1	101	9
Can't afford it.	105	29	20	3	0	78	5
Parents don't want me to.	7	0	1	1	0	6	0
Can be just as successful without going to college.	5	0	5	1	0	5	1
Couldn't make good enough grades.	119	21	45	0	3	157	4
Want to get married.	69	15	4	0	5	47	3
Other.	85	38	11	0	2	55	2
WOULD YOU GO TO COLLEGE IF YOU HAD ENOUGH MONEY?							
Yes.	103	80	33	1	1	109	11
No.	357	56	68	6	10	252	12
Maybe.	287	69	68	2	4	235	16
IF YOU ANSWERED "YES" OR "MAYBE" YOU WOULD GO TO COLLEGE IF YOU HAD ENOUGH MONEY, HOW MUCH WOULD YOU NEED?							
Enough to pay all expenses ($1,200 to $1,500 per year.)	186	78	48	3	2	158	13
Enough to pay half of the expenses ($600 to $750.)	152	79	38	1	4	127	13
Enough to pay some but less than half of the expenses.	41	11	12	2	0	42	3

WOULD YOU GO TO COLLEGE IF YOU HAD ENOUGH MONEY?							
Yes.	13.8	39.0	19.4	11.1	6.7	18.3	28.2
No.	47.8	27.3	40.3	66.6	66.6	42.3	30.8
Maybe.	38.4	33.7	40.3	22.3	26.7	39.4	41.0
IF YOU ANSWERED "YES" OR "MAYBE" YOU WOULD GO TO COLLEGE IF YOU HAD ENOUGH MONEY, HOW MUCH WOULD YOU NEED?							
Enough to pay all expenses ($1,200 to $1,500 per year.)	49.0	46.4	49.0	50.0	33.3	48.4	44.8
Enough to pay half of the expenses ($600 to $750.)	40.2	47.0	38.8	16.7	66.7	38.8	44.8
Enough to pay some but less than half of the expenses.	10.8	6.6	12.2	33.3	0.0	12.8	10.4

INTEREST IN FURTHER EDUCATION EXPRESSED BY PARENTS OF EIGHTH GRADERS

Parents of eighth graders in Macomb County public and parochial schools were asked about their educational attainment and their interest in further education for themselves. The following table compares the educational level reported by 6171 fathers and 6232 mothers and the educational level of all Macomb County males and females, aged 25 and over, in 1960.

FORMAL EDUCATION OF PARENTS OF MACOMB COUNTY EIGHTH GRADERS IN 1965 AND EDUCATION OF TOTAL COUNTY POPULATION, AGED 25 AND OVER, IN 1960

(percents)

EDUCATIONAL LEVEL	1960 Males	1965 Fathers	Difference	1960 Females	1965 Mothers	Difference
8th grade or less	34.3	15.7	-18.6	31.2	10.4	-20.8
Some high school	25.4	27.6	+ 2.2	25/4	27.5	+ 2.1
High school grad	25/2	32.9	+ 7.7	34/3	48.4	+14.1
Some college	8.2	14.9	+ 6.7	5.8	9.4	+ 3.6
College graduate	7.0	8.7	+ 1.7	3.3	4.3	+ 1.0

The parents reporting in 1965 are a younger population than the 1960 over-25 population, and this is evident in the sharp decrease in the number of parents reporting eight years or less of education in 1965 compared to the 1960 figure. The parent group reflects the continuing trend toward longer participation in school. The proportion of fathers reporting in 1965 who terminated upon high school graduation was 30% greater than for all males over 25 in 1960, and for mothers the increase was 41%.

Of the parents participating in the 1965 Survey, 43.3% of the fathers and 37.9% of the mothers did not complete high school. The comparable figures for the 1960 adults were 59.7% males and 56.6% females. The proportion of mothers who completed high school but did not continue their education exceeded the proportion of such fathers by 50%. Participation in college by fathers was almost double the participation of mothers. Of fathers who attended college, 37.3% graduated, while only 31.2% of mothers who entered college completed four or more years. College participation among the 1965 parent group is significantly higher that that of the total over-25 population in 1960, 55% greater for fathers and 50% greater for mothers. College graduates comprised 6.6% of the reporting parents compared to 5.1% of the total adult population in 1960. Only 35% of the 1965 parent group who entered college graduated, compared to a college completion of 42% of the total over-25 population in 1960 who had attended college.

The parent group was asked to indicate their interest in further education. The responses are tabulated as percents in the following table.

PARENTS' INTEREST IN FURTHER EDUCATION

TYPE OF EDUCATION	Fathers	Mothers	Combined
Work on college degree	10.8	11.0	10.9
Job improvement courses	34.4	18.4	26.4
Self improvement courses	15.1	30.1	22.6
No present interest	39.7	40.5	40.1

Twice as many mothers are interested in education for self improvement and almost twice as many fathers as mothers are concerned about further education for improving job skills.

When projected to include the needs and interests of the total adult population in Macomb County, these responses indicate very large potential enrollments in the Community College academic, occupational, and continuing education programs as well as opportunities for expanding adult education programs in the local school districts.

FOLLOW-UP PRACTICES IN MACOMB COUNTY HIGH SCHOOLS

Principals of Macomb County public and parochial high schools were asked to provide information concerning their efforts to identify the present status of former graduates. All schools contacted, nineteen public and eight parochial, responded to the survey. Three public high schools were not surveyed because they had no 196. graduating classes.

Thirteen of the public high schools had conducted follow-up studies of a former graduating class. None of the parochial schools had attempted follow-up studies. Only five high schools had surveyed their 1964 graduates, and in five cases the most recent study was done for a class graduating prior to 1960.

The following table shows the extent of follow-up efforts in the high schools of Macomb County:

FOLLOW-UP STUDIES IN MACOMB COUNTY HIGH SCHOOLS

Graduating Class Studied	No. of Schools Reporting Studies	Was Information Put Into Report Form?	
		Yes	No
1964	5	4	1
1963	2	1	1
1962	0	-	-
1961	1	1	0
1960	0	-	-
1959	1	0	1
1958	2	2	0
Year Unknown	2	1	1

Schools were asked which of their staff made regular use of information gathered through follow-up studies. Principals were the most frequent users of the information, and in only five schools were classroom teachers regular users, although such information could have considerable significance for evaluation of course content and instructional methods.

PERSONNEL USING FOLLOW-UP STUDY INFORMATION

Personnel	Frequency Reported
Principals	15
Assistant Principals	9
Counselors	13
Vocational Coordinators	9
Classroom Teachers	5
Others	4

All schools surveyed reported the numbers of students graduated in 1964. Twenty-three of the 27 schools reported the numbers of 1964 graduates in attendance at two or four-year colleges and universities. Three schools made percentage estimates of graduates in college and one school did not answer. The numbers of 1964 graduates in attendance at four-year colleges and universities were derived from various sources as follows:

Source	No. of Schools Using Source
Reports from college registrars	14
Student indications of intent while still enrolled in high school	12
Follow-up study made of graduates of 1964	9
Other	2

Twenty-three schools reported that 1,445 of 3,840 graduates of the 1964 class had enrolled in four-year colleges and universities. This proportion of college-goers, 37.6%, contrasts with the county-wide totals compiled from the Annual Fall Statistical Reports submitted to the State Department of Education. These reports indicate that 31.3% of all 1964 Macomb County public high graduates were enrolled in four-year colleges and universities or junior colleges in October of 1964. It is apparent that high schools do not have sufficient information concerning the status of their graduates and the 37.63 percent determined to be in attendance at four-year colleges and universities is probably an unrealistically high estimate.

While there is great variation among high schools in their efforts to accomplish follow-up studies, the high school principals supported overwhelmingly the suggestion of cooperating with the other schools in Macomb County to prepare standardized forms and procedures (such as data processing) for follow-up studies of high school graduates and drop-outs.

Recommendations

1. A coordinated follow-up study of high school graduates and drop-outs should be conducted annually by Macomb County high schools and Macomb County Community College. Such studies should include all students, rather than only those students in reimburseable vocational programs as presently required by the Department of Vocational Education.

2. The coordinated follow-up study should employ standardized procedures and survey instruments to facilitate tabulation by data processing and to yield information on which County-wide evaluations can be based.

3. Information regarding the employment and educational status of graduates and drop-outs should be obtained as a function of the Annual Expanded School Census, which is conducted by all school districts.

4. Greater emphasis should be put on follow-up of students who leave high school prior to graduation. These persons should be encouraged to continue their educations, either in regular school, adult evening classes, or in special programs developed for their needs.

OCCUPATIONAL TRAINING THROUGH EXISTING ADULT EDUCATION PROGRAMS IN MACOMB COUNTY

Fifteen of the twenty-one public school districts in Macomb County offered adult education programs during 1964-65 that included occupational training classes. It is expected that additional districts will offer adult education under the newly liberalized reimbursement policies of the State. Macomb County Community College is offering a program of adult education for September, 1965.

ADULT VOCATIONAL PROGRAMS IN MACOMB COUNTY 1964-65.

OCCUPATIONAL AREA	COURSES OFFERED	ENROLLMENT
Agriculture	None	---
Business	11	1,868
Distributive	4	308
Home Economics	7	2,291
Trade & Industry	14	1,048

Occupational classes offered through adult education have several unique values.

1. Classes typically are offered to meet specific community interest.

2. Programs are offered with a maximum freedom from administrative procedures which discourage many persons from participating in regular 'credit' programs.

3. School facilities are available during evening hours when adult education has been most popular.

4. Decentralization into small units in many schools brings education opportunities closer to the people and minimizes problems such as parking.

5. Instruction may be informal and experimental.

Offsetting these are certain problems peculiar to adult education.

1. Narrowness and sterility of occupational offerings may result from the small drawing power of single-district programs.

2. The general practice of cancelling classes when minimum enrollments do not materialize discourages participation.

3. Expenses of administering adult education program and adequately publicizing available courses.

4. Confusion in purpose, methodology, and level of instruction which is caused by attempting to serve many purposes in a single course:

   a) high school completion credit
   b) occupational training, retraining, or upgrading
   c) hobby, recreational, or leisure goals
   d) community service.

5. Difficulties in recruitment, evaluation, compensation, and retention of a competent teaching staff.

Recommendations to make adult education more effective as an agency for occupational training.

1. All adult education programs and classes should be evaluated for purpose(s) and should be structured and taught toward those purposes.

2. Sequences of classes in occupational areas should be developed and presented in consecutive terms.

3. The adult education directors (or vocational directors) of Macomb County public school districts should function as an Adult Education Committee to recommend the development of programs and the scheduling of specific portions of occupationally oriented programs in adult education. The committee should undertake the evaluation of adult education offerings to insure their quality.

4. The Adult Education Committee should assist in the preparation of a master list of available qualified persons interested in teaching in their area of occupational proficiency.

5. The Committee should prepare a master schedule publicizing all adult education courses offered in the County. The master schedule should be mailed to every residence in the County. The schedule should identify adult education courses by purpose(s), i.e., high school completion, occupational training, or recreational and cultural development. The selection of courses to be offered should consider these factors:

   Indicated public interest in courses or programs

   Local employment opportunities

   Availability of specialized teaching facilities and qualified instructors

   Geographic factors of distance and main roads.

   Sequences of courses in occupational families

   Avoidance of wasteful competition from duplicated classes.

   It may be found more practical to use a smaller area than the entire County for coordination of adult vocational education programming. In this case, the areas proposed as service areas for Area Occupational Education Centers may be more suitable.

6. Fees should be established which will yield an income sufficient to guarantee the quality and continuation of adult education programs. It is suggested that determining costs by an entire program rather than by individual classes may reduce the number of classes cancelled because of low enrollments.

RECOMMENDATION I

The Citizens Advisory Committee recommends that greatly increased efforts be made to upgrade the quality and expand the types of occupational education opportunities offered by Macomb County secondary schools. The Committee offers the following information gathered by this study to support its recommendation:

Education and Employability.

* There exists an alarming gap between the competence required for entry employment at a significant level in the local work force and the ability of the existing school programs to provide persons with that level of competence.

* This skills gap will continue to widen as technological changes create demands for highly skilled workers and eliminate employment opportunities for unskilled workers. Employment opportunities for professional, technical and kindred workers in 1975 will be 85% greater than in 1960, while the numbers of persons employed as operatives and laborers may actually decrease in spite of population and labor force growth.

* Each year record numbers of eighteen year olds are seeking entry into a work force with fewer opportunities for the unskilled. The number of Macomb County residents attaining age 18 in 1975 will be more than double the 1965 figure of 8,152.

Inadequacy of Present Programs.

* Despite the widespread publicity being given to the importance of education for gaining employment, more than one of every four persons terminates formal education before high school graduation. The Committee believes that this is sufficient evidence that the educational needs of these persons are not being served by present secondary school programs.

* One-fourth of all Macomb County high school graduates were not enrolled in either a college preparatory or a vocational program of studies while in high school.

* Only three of every four students who prepare in high school for college entry actually enroll in college and, according to national studies, only half of these will graduate.

* The existing vocational programs in Macomb County high schools are extremely limited, especially programs for occupations which offer the greatest employment opportunities for boys. Table A-1 indicates that of 2512 senior boys responding to a Survey questionnaire in May, 1965, 195 were enrolled in a commercial program, and 346 boys were enrolled in a vocational shop program. In addition, 17 boys

reported that they were following an agricultural program in high school. The combined total of 558 boys on vocational programs is only 22.2% of the total boys responding. The lack of variety in vocational programs results in unrealistically large enrollments in college preparatory and general programs, and contributes to the decision of many youngsters to terminate school before high school completion.

RECOMMENDATION II

The Citizens' Advisory Committee recommends that a system of area occupational education centers be established to provide adequate occupational education opportunities for public and parochial high school students in all districts of Macomb County.

It is further proposed that these centers be fully utilized, during the daily time periods when not in use for high school programs, for Community College occupational, adult remedial, worker retraining and upgrading, apprenticeship, and continuing education programs as the needs for these are identified. All such programs should be coordinated with other public educational efforts in Macomb County. The Committee offers the following information as evidence of the need for a County-based approach to providing adequate occupational education opportunities in Macomb County.

Local District Financial Ability.

* Few, if any, Macomb County school districts have both the enrollment and tax base sufficient to provide adequate programs in vocational education. Such programs are among the most costly activities of the public schools, yet they are not provided with substantial state financial support as are programs for the physically and mentally handicapped. The dispersion of effort and the fragmentation of resources among 21 school districts makes adequate occupational education opportunities for all County citizens an unattainable goal.

* The tax resources of the 21 school districts vary so widely that equal educational opportunities are not available to all Macomb residents. Operating costs for the 1964-65 school year ranged from a low of $304.70 per pupil to a high of $553.40 among the 21 public school districts. The accompanying map illustrates that a significant proportion of the families in many school districts had a family income of less than $4,000 in 1960. It is doubtful that such families can afford the increased local school taxes which would be required if each district is to provide adequate occupational programs alone.

* The ability of the County districts to support adequate educational programs is decreasing rapidly as school enrollments increase and statutory requirements tend to reduce assessable property valuations. From 1959 to 1964, 19 of the 21 County school districts experienced a depreciation in state equalized valuation per membership child, and for five districts this loss exceeded 30%.

Fraser	33.
Warren Woods	31.5

State Support.

* State-derived financial support for all public school needs decreased from a state-wide average of 57.7% in 1954 to 46.4% in 1964. When viewing vocational education only, state support for local programs accounted for 11.5% of the total cost for the biennium, 1962-64, compared to 19.2% derived from federal sources, and 69.3% provided by the local school districts.

* Only one of every eight 11th and 12th grade students in Macomb County public high schools is enrolled in a vocational program which meets state standards for reimbursement. Total state and federal vocational reimbursements average only $4.50 a year for each 11th and 12th grade student. (Enrollments and reimbursement for homemaking are not included).

* Macomb County enrolls 6.62% of the state public school population yet receives only 3.83% of the state-distributed reimbursement for vocational education. This is evidence of insufficient vocational programs and the inadequacy of some programs when measured by reimbursement standards.

Population Growth.

* The inadequacy of Macomb County schools to provide realistic occupational programs will become even more serious during the next decade. Enrollments in grades 11 and 12 will double from today's 15,000 students to 30,000 in 1975. Table A-3 indicates the size of the 16-17 age group population by school districts in 1970 and 1975. These populations are based upon the 1965 annual school census, and no adjustment has been made for in-migration or out-migration. Projecting the same net growth in the age group from in-migration for the 1965-70 and 1970-75 periods as occurred in 1960-65, Macomb County will have 25,120 persons in the 16-17 age group in 1970, and 33,256 in 1975. A 5% increase in the rate of school participation for the group is projected for each five year period. This is not an unrealistic goal. The 1960 school enrollment of 16-17 year olds in Macomb County was 84.1% of the age group. The continuing trend toward higher retention in school of the school age population, the increasing demands for higher levels of employment skills, intensive efforts to curb school dropouts, and the enrichment of educational programs, especially in occupational areas, should expand markedly the school participation of 16-17 year olds. The projected participation rate, (94.1%), is below rates already being achieved in a number of Michigan counties. On this basis, 1970 enrollments in grades 11 and 12 are projected as 22,859, and 1975

Table A-3

1970 and 1975 ENROLLMENTS IN GRADES 11 and 12 BASED UPON PRESENT POPULATION PROJECTED TO AGES 16-17 and CONTINUING IN-MIGRATION

Fitzgerald	778	889	1,101
Van Dyke	946	1,145	1,448
Warren	1,720	2,639	4,001
Warren Woods	475	768	1,333
Total Southwest Area	4,798	6,543	9,273
County Totals	17,912	23,863	30,046
In-migration based upon 1960-65 experience rates		+ 1,257	+ 3,210
Projected population in 16-17 age group		25,120	33,256
11th and 12th grade enrollments at 1965 participation rate		21,603	28,600
11th and 12th grade enrollments at 1965 participation rate + additional 5% of 16-17 age group		22,859	
11th and 12th grade enrollments at 1965 participation rate + additional 10% of 16-17 age group			31,926

enrollments will total 31,926 for the same grades. While these techniques for projecting enrollments are imprecise, the three major factors of existing population, continuing significant in-migration, and increasing school participation of the age group are consistent with previous experience.

* Population increases will not occur uniformly throughout the County. Increases will be concentrated in the central region of the County and the northern area of the city of Warren. 1960 populations and 1980 population projections prepared by the Macomb County Planning Commission for selected central Macomb County communities illustrates this concentration.

Table A-4

Community	Population 1960	Projected 1980	Percent Increase
Chesterfield Twp.	5,880	33,500	472%
Clinton Twp.	25,688	67,700	164%
Fraser	7,027	21,200	202%
Harrison Twp.	12,910	30,000	132%
Macomb Twp.	4,807	9,900	106%
New Baltimore	2,375	6,450	172%
Shelby Twp.	17,114	69,300	304%
Sterling Twp.	14,622	150,700	931%

* Enrollment increases are overtaxing school capacities in many County districts. County-wide, school enrollments increased by 48.9% from 1959 to 1964. Enrollments for four districts more than doubled in this five year period.

Table A-5

School District	1959-64 Increase
Warren Woods	324.2%
Warren Consolidated	264.5%
Utica	141.6%
Fraser	115.1%

Student Reactions.

* Only one of every six seniors in Macomb County high school believes that his high school is preparing him adequately for what he plans to do after high school.

* 81.5% of the seniors not on a vocational or college preparatory program stated that they definitely, or probably, would have enrolled in a vocational course of study if a wider choice had been available when they entered high school.

* Only one of seven seniors reported that he had received all the help he needed in making plans for his future.

* Less than 10% of the seniors rated the choice of high school courses available as excellent. Only 2.7% of the parochial school boys considered their choice of courses as excellent.

* The non-college bound students, the vocational and general students, and students ranking in the lowest third of their class academically were least satisfied with the high school programs and services. One notable exception was the reaction of girls on a business program, who were satisfied generally with the opportunities the high school has to offer.

Employer Reactions.

* A representative group of Macomb County employers stated by a five to three margin that most high school graduates are not ready for employment because they lack occupational skills.

* Two of every five responding employers were critical of the new employee's attitudes toward work and his responsibilities to his employer.

* Employers reported by a four to one margin that employees who have had occupational training in high school are better prepared for entry jobs in their firms.

* Most employers who responded to our questionnaire indicated that they would support improved high school occupational programs, and strong support was expressed for area vocational high schools.

Educators' Reactions.

* Macomb County counselors indicated that student interests and talents can be served only by a wide range of vocational programs and services. Many counselors stated that adequate programs are beyond the capacity of their high school to provide.

* Macomb County high school principals reported that many needed services such as job information, job placement, follow-up of graduates, and assistance to school dropouts are not being adequately provided.

* Fifteen of the twenty-two public high school principals selected the area vocational school as the most practical means of providing adequate occupational programs in Macomb County.

PHILOSOPHY OF THE AREA OCCUPATIONAL EDUCATION CENTERS (AOEC)

Public education has a responsibility for assisting each person in the attainment of self-realization, whether his goals consist of further education or direct employment. Public education must assist the individual in assessing his own potential and must provide reasonably adequate opportunities for exploration and self-development in a wide variety of areas.

In recognition of the vertical mobility of American society, each student should have access to programs which are structured to permit and encourage a broad education and the maximum development of his intellectual capacity.

While the AOEC programs aim to equip students with skills and attitudes adequate to obtaining entry employment, it should be the purpose of the AOEC to encourage each student to continue his education to the maximum of his capacity.

The AOEC will be complementary to the students' home high school. The AOEC should not undertake any social or extra-curricular activities which might tend to weaken the student's participation in his home high school. A student choosing to terminate his attendance in the home high school before graduation should be removed from the AOEC program. However, such students, and other dropouts not enrolled in an AOEC program, should be encouraged to enroll in a suitable evening program of the AOEC. The potential school-leaver and his parents should be interviewed to ascertain the student's needs and to persuade him to continue his education, preferably as a full-time high school student.

The AOEC staff should provide the leadership in the development of secondary occupational curriculum. All Macomb County high school students should have access to the following types of occupational programs:

Pre-technical programs which are part of a well-defined sequential transfer program established with the Community College technical programs.

Vocational programs which provide entry employment skills in a definable occupation for which a demand usually exists. These programs are designed to serve the needs of persons who intend to enter the labor force directly upon high school completion.

Opportunity programs which are designed to provide employable skills for persons of limited ability and/or limiting handicaps.

The needs for occupational competence of persons enrolled in non-public schools must be met, for their skills contribute, or their lack of skills burden the community, in the same measure as persons attending public institutions.

SPECIAL ADVANTAGES OF THE AOEC

The activation of the area occupational education centers offers the greatest potential for the development of realistic programs of occupational education equally available to all residents of Macomb County.

a. The resources, human and material, of the entire County can be concentrated to implement realistic occupational programs as rapidly as possible.

b. Coordinating the efforts of the present vocational staffs will effect prompt program expansion and improvement.

c. Existing and proposed facilities can be better utilized and serve more persons.

d. Services of recognized value, not now being provided adequately, can be made available to the community. These include:

   vocational counseling
   aptitude testing
   cooperative work experience
   job placement service
   follow-up studies
   job information service
   qualified, specialized instruction
   realistic learning laboratories
   wide choice of programs designed to develop entry competence in a cluster of occupations.

e. Reimbursement of programs can be achieved at rates significantly more realistic to the costs of occupational education.

f. Economies in purchasing, planning, and instruction can be effected by the elimination of duplicated and overlapping activities.

g. A learning environment will be provided wherein the development of wholseome attitudes toward work and the employer are integral aspects.

h. Adoption of the area concept through the AOEC will result in eligibility for federal grants for construction of vocational facilities under the provisions of the Vocational Education Act of 1963 (PL 88-210).

i. The need for additional secondary facilities of the comprehensive type will be diminished and postponed by the development of the AOEC. This savings will be shared by all school districts, but will be especially advantageous to districts confronted with the greatest population growth and lowest tax bases.

j. The success of area vocational centers in other states indicates that the AOEC can be expected to attract between 20% and 30% of the 11th and 12th grade students in Macomb County high schools.

PROBLEMS ARISING FROM THE ACTIVATION AND OPERATION OF THE AOEC

Changes in the internal organization of institutions can be expected to cause dislocations. These dislocations must be weighed against the expected benefits resulting from such changes. The Committee has attempted to identify the problems and inconveniences which will result from the creation of the AOEC program, and while it does not attempt to minimize the problems involved, the Committee believes that the values of the proposal far outweigh the inherent disadvantages.

A. Deviation from Approved Organizational Patterns

The pattern for control of the AOEC's which is proposed in this recommendation does not conform to any of the organizational patterns which are identified in the State school codes. A ruling from the State Attorney General should be sought promptly to ascertain the legality of the proposed pattern, and if necessary, enabling legislation for its acceptability should be requested from the Legislature. The proposed pattern reflects the Committee s strong conviction that any additional public educational services provided in Macomb County should be coordinated with the existing educational agencies; however, another pattern of control should be adopted if necessary to the achievement of the objective of this Survey - adequate opportunities for realistic occupational education equally available to all citizens of Macomb County.

B. Need for Additional Financial Support

The high costs of providing adequate occupational programs necessitates additional financial support from the admittedly already over-burdened general property tax. The Committee strongly urges more realistic State support for occupational education as a more equitable solution, but recognizes that this is not likely to materialize rapidly enough to meet our pressing needs for the immediate future. The least costly means of providing the minimum necessary programs is a county-wide approach, rather than the continuation of 21 inadequate local district efforts. Federal and State funds are obtainable for partial support of construction of facilities and reimbursement of operating costs, but these resources are supplemental to local financing, and usually only available on the basis of the quality and extent of present on-going vocational programs.

C. State Aid

Steps must be taken to acquire state aid for that portion of a parochial student's education which is provided in the AOEC. Diversion of some portion of the state aid provided for the public school student, or a nominal tuition charge to the district of residence, may be required to finance the AOEC programs and to comply with legal requirements.

D. Transportation Requirements

The commuting of students to the AOEC will add both to the student's time involvement and to the expense of transportation services. In the Southwest Area, the distance from the high schools within the service area to the AOEC will not exceed five miles, nor four miles in the Southeast Area. A single AOEC to serve the immediate needs of both the Central and North Area will require the transporting of small numbers of students for distances not exceeding twenty miles, and with the activation of additional AOEC's to serve the eventual needs for separate East Central and North Areas, the distances involved should not exceed ten miles. Because of the small potential enrollments in the north-County districts, a sharing of transportation services appears to be practical. If the expense of transportation is a prohibitive factor, other schedules, such as week-in and week-out, or two weeks in and two weeks out, should be considered.

E. Coordination of School Schedules

The coordination of daily schedules and yearly calendars between home high schools and the AOEC will require some surrender of autonomy by the home high schools. The Committee believes that this is a minor problem.

ADMINISTRATION AND CONTROL OF THE AOEC's

The accompanying organizational chart details a suggested pattern for control and administration of the area occupational education centers. Significant features are:

1. Control of all AOEC's should be vested in a Board of Control for Area Occupational Education Centers composed of:

   a) one member of an existing K-12 school district board of education within each AOEC service area*, elected by the school boards of all K-12 districts comprising the AOEC service area.

b) one superintendent of an existing K-12 school district within each AOEC service area, elected by the superintendents of all K-12 districts comprising the AOEC service area.

c) one member of the school board of the Intermediate School District, elected by that body.

d) the superintendent of the Intermediate School District, or his appointed representative.

e) the Superintendent of the Intermediate School District shall take the necessary steps to activate the Board of Control.

* the service area of each AOEC is composed of the school districts which are served by that AOEC

2. The Board of Control shall exercise control and supervision of all area occupational education activities carried on under the authority vested in them.

3. The Board of Control for AOEC's shall appoint a director to administer and operate all AOEC's established under their jurisdiction, and a principal, administrative and instructional staff, and supportive personnel for each AOEC. These personnel shall meet the educational and occupational experience requirements outlined in the Michigan State Plan for Vocational Education (Section 1.5), and such additional qualifications as may be specified by the Board of Control for AOEC's.

4. The Board of Control shall apportion to the various AOEC's all monies that are appropriated, levied, or granted for such purposes, according to the needs of each AOEC.

5. Determination and revision of AOEC service areas should be based upon the following factors:

   Existing school district boundaries,

   Present high school enrollments and projections to 1970 and 1975.

   Geographic areas, distances, and the adequacy of roads.

The Citizens' Committee has proposed four AOEC service areas to include the following K-12 school districts:

North Area:	Anchor Bay, Armada, New Haven, Richmond, Romeo.
Central Area:	Chippewa Valley, Clintondale, Fraser, L'Anse Creuse, Mt. Clemens, Utica.
Southeast Area:	East Detroit, Lakeview, Roseville, St. Clair Shores South Lake.
Southwest Area:	Center Line, Fitzgerald, Van Dyke, Warren, Warren Woods.

ORGANIZATION OF A SYSTEM OF AREA OCCUPATIONAL EDUCATION CENTERS IN MACOMB COUNTY

* at least one representative from each high school within the AOEC service area will be a member of the AOEC Advisory Committee.

MACOMB COUNTY

—·— COMMUNITY COLLEGE DISTRICT

—— INTERMEDIATE SCHOOL DISTRICT

MACOMB OCCUPATIONAL EDUCATION SURVEY - 1965

The Committee recommends that, initially, AOEC's be established in the Central Area, the Southeast Area, and the Southwest Area. The Central Area AOEC should serve the needs of all students in the North Area until increased enrollments warrant the construction of separate facilities for the North Area. The facilities provided for the Central Area should be located centrally to the Utica and Chippewa Valley districts in anticipation of a future need for the creation of a separate East Central service area. An accompanying map identifies the service areas and the projected 11th and 12th grade enrollments in 1975 for each service area.

6. The Vocational-Technical Director of the Intermediate School District shall

   a. advise the Intermediate School District Board of Education and the County Board of Control for AOEC's periodically of his evaluation of the functioning of each AOEC.

   b. meet with the director of the AOEC regularly to assist in coordinating programs.

   c. represent the county board of education and/or the county superintendent, at their request, in any dealings with the AOEC's.

OPERATION OF AREA OCCUPATIONAL EDUCATION CENTERS

Instructional Staff

Recognizing that superior instruction is essential to successful accomplishment in occupational education, each AOEC program should be placed under the supervision of a Chairman who is vocationally certified under the Michigan State Plan for Vocational Education and possesses exceptional teaching proficiency and demonstrated skills competence in the curriculum area under his supervision. Business or industrial experience of a significant level should be evaluated highly in the selection of these persons. It shall be the responsibility of the chairman to plan and develop a program which will lead to trade competence, and to coordinate all instruction within that program offered in each of the AOEC's. The chairman shall make full use of a curriculum advisory committee in carrying on these functions.

The AOEC instructor must possess trade competence, demonstrated ability as a teacher, and the personal qualities required for success in working with adolescents. Instructors should be vocationally certified excepting that persons exceptionally qualified in their occupational skills who do not meet full academic requirements may be employed if certifiable under the State Plan (Section 1.53-13).

The salary schedule for instructors should be sufficiently high to attract and hold the truly exceptional vocational teacher.

Guidance counselors in the AOEC shall be vocationally certified under the State Plan, possess occupational experience of significant depth and duration, and demonstrate the capacity to deal effectively with the secondary school occupational students. The guidance functions of the AOEC will be closely coordinated with the home high school and the progress of each student should be evaluated frequently by the AOEC staff and the home high school counselor.

Students to be Served

Entry to AOEC programs will be open to all public and parochial students in grades 11 and 12 who demonstrate the capacity to profit from a program in the AOEC. If a program suitable to his needs is not available in the AOEC within his own service area, the student may be admitted to such a program offered elsewhere in the County. Not all programs will be of two years duration. Some students' needs may be served adequately with a single year or a single semester of attendance in the AOEC.

The normal procedure for admitting students to a program in the AOEC should be as follows:

1. Student makes application for a program, usually in the tenth grade and after consultation with a guidance counselor.

2. The approval of the student's parents is obtained.

3. The AOEC approves or rejects the student's application solely on the predictable ability of the student to succeed in the program he has chosen as measured by aptitude tests and the judgment of his instructors. If rejected, the student is advised of other AOEC programs for which he meets entry standards.

4. The student is free to change goals and programs after consultation with a counselor, and every effort should be made to enable him to do so without loss of scholastic standing.

Curriculum Development in the AOEC

Curriculum should be developed, insofar as possible, in anticipation of changing occupational patterns and skills requirements. Thus an essential function of the AOEC staff is the continuing exploration of occupational changes, and experimentation and innovation in instructional technology. Emphasis should be given to interdisciplinary instruction as promising more effective results than the traditional unrelated courses approach to occupational education.

Metal Trades	.3	.3	.8

Table A-7 indicates the interest in selected occupational programs expressed by Macomb County high school seniors, grouped by sex, and by academic placement.

Two types of learnings will comprise the AOEC offerings:

1. Experiences that provide the student with specific skills related to the occupation, or cluster of occupations, for which he is preparing.

2. Work-orientation experiences which provide the environment in which a particular occupation can be pursued most effectively.

Work-orientation includes:

employer-employee relations
techniques of applying for a job
development of good work habits
personal appearance and grooming
assuming responsibility
occupational information
value and use of money
laws and regulations affecting the worker, such as social security and income tax requirements.

A major advantage of the AOEC program will be the pooling of instructional resources which are now dispersed among the 21 K-12 districts. The concentration of effort through the AOEC should result in:

the maximum use of specialized teaching skills,
individualized instruction,
experimentation and innovation in teaching techniques,
realistic curriculum development based upon the continuing exploration of occupational shifts and changes in occupational skills requirements.

Content of vocational programs and courses which are offered in the home high school should be determined by the home high school, except for that which is preparatory to the area program (mathematics, science, graphic communications). Courses which are designed as preparatory to an AOEC program should be cooperatively developed by the home high school and the AOEC staffs.

Area Programs

Occupational programs should be explored, developed, and conducted with the full involvement of advisory committees composed of persons knowledgeable and skilled in the occupations for which programs are aimed. The determination of the specific area programs, or portions of programs, which are appropriate for development at the secondary level, should be made by the AOEC staff and the advisory committee selected for each curriculum area. Preferably, such decisions should involve the staff of the Community College in order to achieve these results:

1. the maximum articulation between the secondary and post-secondary occupational programs;

2. the appropriate grade placement of specific learnings;

3. the avoidance of undesirable duplication of offerings.

Full use should be made of occupational needs surveys, both on the local and national level, student interest measurements, and the continuing follow-up of former students in program development.

Table A-5 indicates the relative interest and need for occupational programs in Macomb County as measured by various activities undertaken in connection with this study. This index indicates that programs in health, electrical and electronics, advanced office practices, pre-technical, automotive, mechanical drafting, metals machining, and building trades can be advantageously developed in Macomb County. More extensive measurements to determine the specific nature and level of area programs should be undertaken in the period during which the necessary legal steps are being taken to implement a County-wide system of area occupational education centers. Programs should be developed in a wide range of occupational areas, including appropriate secondary programs in the occupational areas indexed in Table A-6.

It is the Committee's belief that the selection, location, priority, content, and methodology of specific occupational education programs should be determined by the professional staff charged with providing such programs, and the advisory committees selected to assist in these activities. However, the following general criteria are offered for guidance in the determination of the priority of establishment, and the placement of programs in the AOEC's or the home high schools.

a. The priority of programs to be developed and offered in the AOEC's should include consideration of:

   The extent of student interest in a program,

   The immediate entry employment outlook for a specific occupation, or a cluster of occupations,

   the long-range entry employment and advancement opportunities,

   the lack or inadequacy of existing County high school programs in the field.

b. The decision to offer a particular program in the AOEC or in the home high school should include consideration of:

the costs of program development and equipment,

the potential student enrollments,

the availability of qualified instructors,

the special values of cooperative work experiences, and

the location of suitable work stations.

Coordination Between the AOEC and the Home High School

A close cooperation between these two units is essential if the needs of the student are to be served adequately. Time schedules of all high schools within the service area will necessarily be arranged so that the student can be accommodated in both institutions. Students would be served in the AOEC for the equivalent of one-half of each school day and would attend the home high school for the balance of their instruction. The home high school would provide:

1. Instruction in general education, fine arts, sciences, mathematics, and those occupational courses or programs which can be offered more practically in the home high school.

2. Opportunities to participate in activities of a social or extra-curricular nature.

3. Determination of requirements for graduation.

4. All pupil personnel services.

5. Maintenance of all necessary student records.

6. Any necessary transportation between schools and between home and school.

In order to implement this close cooperation, it is recommended that home high school administrators, guidance personnel, and vocational instructors be represented on the Advisory Committee of each AOEC.

The AOEC should undertake only those activities which are essential to the successful operation of its occupational education function.

Financing the Area Program

Occupational education doesn't cost, it pays. However, an initial investment is required to guarantee the long-range dividends. In-school occupational training is more practical and far less costly than programs to retrain the unemployed. The average cost per trainee under the MDTA program is about $1500, and about $700 per trainee under ARA. In contrast to the costs of these short-term programs, available evidence indicates that AOEC operational costs will be approximately $350 a year for each student served. All amounts are based upon 1965 cost figures.

South West Area: Center Line, Fitzgerald, St. Clement, Van Dyke, Warren, Warren Woods

Additional financing will be required to construct and operate the area occupational education centers. Justification for increased support is based upon the premise that it will be more economical to provide programs to develop occupational competence than it will be to meet the consequences of the failure to provide such programs. These sources will need to be utilized to provide sufficient funds for the establishment of the area occupational education program:

1. A general property tax millage levy should be sought through the existing power of the Intermediate School District to request voter approval for this measure. This obligation should be sought for the maximum number of years, and a sufficient portion of the proceeds should be reserved for the retirement of bonds issued to finance the local share of construction and capital outlay requirements.

2. Every effort should be made, individually, and in cooperation with other counties, to persuade the legislature to consider the needs of vocational education in a manner similar to the consideration being given to special education. This additional state financial support should be realistic and continuing, and should be for the construction and operation of area occupational education centers, on a formula which recognizes the high costs of these programs.

3. Every effort should be made to obtain the maximum state and federal reimbursement which is compatible with sound program development and the welfare of the student. Application should be made for other appropriate state and federal subsidies as these become available.

4. Equalization of educational opportunities for all citizens of Macomb County indicates that the burden of financing the AOEC program should be borne by a County-wide millage, plus the available state and federal reimbursements and grants. However, practical limitations upon the size of the County-wide millage may require local K-12 district participation in the financing of the AOEC's. Preferably, such support, if necessary, should be in the form of pre-determined tuition charges to the district of pupil residence. A less desirable procedure could be the apportionment of budget deficits in the operation of the AOEC's to the K-12 districts on a ratio determined by pupil attendance in the AOEC's.

Costs of Constructing and Operating the AOEC Program

An estimate of the costs of providing area occupational education in Macomb County through the AOEC program previously outlined can be made upon the following assumptions:

Assumption #1 - 11th and 12th grade pupil participation will be between 5,000 (20% of enrollments in grades 11 and 12), and 8,000 (30%), in 1970. Participation in 1975 will be between 7,500 and 10,500 pupils in grades 11 and 12. (Table A-3).

Assumption #2 - A one-mill general property tax levied on the real and personal property of the Intermediate School District will yield an amount averaging $1,750,000 annually for the next ten years, and at least $2,000,000 each year for the succeeding ten-year period.

Assumption #3 - Three area occupational education centers, each with a half-day capacity of 1,000 students, would require a capital outlay of $12,000,000. (Based in part upon laboratory facilities costs projected in Table A-9). With intensive utilization as skills centers for adult vocational, apprentice, Community College technical, rehabilitation, or other special programs, each of these centers could serve 3,000 persons daily. The needs of both the central area and the north area can be met by a single area occupational education center for the next five years.

Assumption #4 - State and federal grants could provide $4,000,000 of the required capital funds. Applications would be prepared each year for funding of construction projects to be undertaken during the succeeding fiscal year.

Assumption #5 - $750,000 of the local property tax levy would be required annually to retire bonds sold to finance $8,000,000 of capital outlay in 20 years, ($600,000 would be required annually to retire the same capital borrowing in 30 years).

Assumption #6 - Realistic programs designed to achieve occupational competence in a field of identified need can be provided at an average per half-day pupil cost of $350, based upon 1965 costs.

Assumption #7 - Federal and state reimbursement for eligible programs will average at least $75 for each half-day pupil enrolled in an area occupational education center.

Based on these assumptions, the following conclusions can be drawn from Table A-10.

Conclusion A: A one-mill County-wide general property tax could provide financial support for serving 3700 students enrolled in AOEC programs. Larger enrollments would require significantly higher state and/or local district support. (Table A-10, Column 1).

Conclusion B: A one and one-half mills County-wide general property tax could provide financial support for AOEC enrollments of 7,000 students. (Column 2).

Conclusion C: A two-mills County-wide general property tax could provide financial support for AOEC enrollments of 10,000 students. (Column 3).

Table A-10

A PROJECTION OF AREA OCCUPATIONAL-EDUCATION-CENTER ENROLLMENTS AS DETERMINED BY THE LEVEL OF LOCAL TAX SUPPORT

3700 students can be served through the proceeds of 1 mill general property tax.
7000 students can be served through the proceeds of 1½ mills general property tax.
10,000 students can be served through the proceeds of 2 mills general property tax.

RECOMMENDATION III

The Committee recommends that intensive study of the most appropriate means of providing opportunities to develop occupational and social proficiency should be a continuing responsibioity of all public education authorities in Macomb County. One purpose of such study should be to effect the optimum continuing utilization of County-supported facilities, such as the AOEC's, whether such use is of a secondary or a post-secondary level. The Committee's concern is prompted by the recognition that there exists a definite lengthening of the years spent in educational preparation for entry into employment and acceptance of adult responsibilities. High school in the future will become pre-vocational for an increasing proportion of our population, especially if college programs which are realistic to the interests of young people and the skills needs of the economy are made available. This is a welcome development, and if it is accompanied by a numerical decrease of high school students who need and desire secondary level occupational training, the AOEC's should be made available for Community College programs to the extent that secondary programs are reduced in size and number, or phased out. At the present time, however, three of every four persons in the high school age group will not be served best by the pre-college programs which are being offered in our high schools. National studies predict that in 1975, only 16.3% of the 25 to 29 age group will have acquired the four year college degree. It is for these reasons that the Committee has based its recommendation for the creation of the AOEC program on the documented needs of our secondary school population only.

RECOMMENDATION IV

The Citizens' Committee recognizes that the implementation of the AOEC program in Macomb County cannot be effected in time to improve occupational education opportunities for the students presently enrolled in high school. The Committee recommends that each school district make the maximum possible effort to expand and upgrade its vocational offerings for the pressing needs of these students, and that informal inter-district programs be implemented where these can be utilized advantageously.

The Committee urges that local boards of education make every effort to meet the occupational education needs of students enrolled in non-public high schools during the period in which the AOEC program is being activated.

COOPERATIVE OCCUPATIONAL TRAINING IN MACOMB COUNTY.

Cooperative Occupational Training--What it Is.

Cooperative occupational training programs may be employed in the training of students sixteen years of age and over who are juniors or seniors in high school or enrolled at the community college level. Such programs are based on the premise that learning takes place more rapidly, and is more permanent, in an experience environment. Cooperative programs integrate school and work by combining classroom instruction with supervised part-time employment which meets and expands the student's abilities, aptitudes, and interests.

The "training station," which is the employing firm, provides a laboratory in which the student tests, observes, and applies concepts and skills presented in the job-related class in school, thereby assuring transfer of learning to the employment situation. Job performance and progress toward development of skills, attitudes, and knowledge required for full-time employment are provided by the employer and are supervised in cooperation with a coordinator representing the school. The student learner is paid a wage by the employer. On a reduced-time program in school the student receives instruction related to the occupation and participates in regular course work required for graduation.

The coordinator is a certified teacher who also has two or more years of employment experience in the occupational field which he supervises. In most instances the coordinator is the teacher of the job-related classes, working with employers, visiting training stations, finding employment opportunities, meeting with advisory groups, and consulting with cooperative training students and their parents. The coordinator should possess special talent as a counselor and advisor to the students, parents, and employers.

Cooperative training students are not denied the normal academic offerings of the school. Job-related instruction is only one part of a student's load. A cooperative training student qualifies for a regular graduation diploma, but adds to his qualifications specific training for specialized work.

The Status of Cooperative Occupational Training in Macomb County.

Fourteen of the thirty-one high schools in Macomb County offered cooperative training in office occupations, twelve schools conducted programs in distributive education, and ten schools conducted programs in trade and industrial occupations during the 1964-65 school year. While the larger high schools are generally more active in cooperative training, one of the largest schools had no cooperative training program and several other schools with enrollments of 800 or more offered less than all three programs.

The number of students enrolled in the various cooperative training programs are, in a few instances, too small to permit economical operation. While the survey does not clearly indicate which programs are "diversified," it is known that several programs are of this type. A diversified program is one in which all cooperative training students, whether office, distributive, or trade and industrial, are supervised by one coordinator. The

related instruction is either handled by "farming out" the Co-op students to other classes, or by grouping them in one class. In the first instance, the students are in classes with non-Co-op students and are observed by the program coordinator only occasionally. In the latter case the students, while grouped in a class conducted by the coordinator, have a wide range of objectives and instruction must be highly individualized. This is not an easy task, and seldom does a coordinator have experience in all three areas. While diversified programs are successfully aiding students in their career objectives, separate programs are preferable whenever the school enrollment is large enough to justify them.

Cooperative occupational training has been offered by several Macomb County high schools for over twelve years. One of every ten public twelfth grade students in the county is currently enrolled in a cooperative training program.

About one-third of the respondents to the employer opinion poll of the Macomb Occupational Education Survey indicated they would support occupational training for high school students.

Over 60 percent of the employers responding to the survey were of the opinion that employees who have had occupational training in high school are better prepared for entry jobs in their firms.

Evidence of the Need for Cooperative Occupational Training in Macomb County.

While 48 percent of the high school seniors responding to a questionnaire circulated by the Survey indicated they planned to work on a full-time basis after graduation, only 783, or about 10 percent, participated in a cooperative work-study program.[1]

COOPERATIVE EDUCATION PROGRAMS - MACOMB COUNTY.

Type of Program	No. of Schools Conducting Programs	No. of Students Enrolled
Distributive	12	247
Office	14	362
Trade & Industry	10	174
Total Students		783

Employment trends place special urgency upon specialized training that cooperative programs provide. Persons employed in clerical, sales and kindred occupations in Macomb County increased from 12.3 to 17.0 percent between 1940 and 1950, and from 17.0 to 22.7 percent from 1950 to 1960.[2]

[1]Existing Programs and Facilities Survey, Macomb County Occupational Survey.

[2]Vocational Curricula in Michigan (Office of Research and Publications, College of Education, Michigan State University: Educational Research Series No. 17; East Lansing, September, 1963), Appendix A. Table 1.

Nationally, office work is the second largest employment classification today. About 15 percent of the civilian labor force is engaged in office work, and it is predicted that between 1960 and 1975 office employment will climb by approximately 45 percent.

Retailing in Macomb County is increasing rapidly as it follows the population to the suburbs. Over 3,000 retail establishments and sales in excess of $537 million in 1963, with a payroll of almost $52 million.[3] Since 1963 two regional shopping centers have opened, with over 100 additional establishments employing about 4,000 more full-time people. Nationally, total employment in wholesale and retail trade increased six percent from 1956 to 1960. In finance, insurance, real estate and the service trades, employment increased over twelve percent.[4]

While the demand for workers in the trade and industrial occupations will not increase in the manner of the sales and clerical occupations, the march of technology has brought a new complexity to trade and industrial occupations. Schools cannot adequately simulate industrial processes; the cost is simply too great. Students need the laboratory experiences that only on-the-job training can provide. In discussing criteria for evaluating programs of vocational education, Byram and Wenrich state, "The environment in which the instruction is given is, or simulates, the working environment to the maximum possible degree."[5]

A follow-up study of Michigan high school cooperative trainees offers evidence that cooperative training promotes rapid transition from school to work. Only one percent of the cooperative trainee graduates were unemployed ten months after graduation, and five out of ten of those available for work had obtained their current full-time employment within one month after graduation.[6]

Suggestions and Recommendations.

High schools with enrollments of 800 or more should survey the interest of the students and the opportunities for part-time employment in all three areas of cooperative training. Smaller high schools should investigate, in addition to student interest, the availability of training stations, as well as staff and facilities available within the high school. Some of the cooperative training needs, especially of the smaller high schools, may be provided in the proposed Area Occupational Education Centers.

[6]How High School Cooperative Trainees Fare in the Labor Market: Phase B (Office of Research and Publications, College of Education, Michigan State University: Educational Research Series No.23; East Lansing, June, 1965.)

Preparatory programs should be offered to those students who, while not interested in a cooperative training program at the high school level, may be planning to pursue a vocational program at the community college. Cooperative training in office occupations is currently offered at Macomb County Community College, and a cooperative program in sales and marketing will begin in the near future. A cooperative program in trade and industry is also being developed.

Traditionally, laboratory facilities and equipment for distributive and office occupations programs have been minimal, in contrast to home economics classrooms, for example, which invariably house a rather complete array of household equipment. Instruction is more meaningful and interesting when it simulates actual work situations. Typing and shorthand alone are not adequate preparation for office trainees: students need simulated office practice classrooms, with the machines commonly in use in business. Distributive education classrooms should include electric cash registers, show cases, and display windows. With the financial assistance provided by the Vocational Act of 1963, schools should give immediate attention to providing adequate laboratory-classrooms for cooperative programs.

A successful cooperative training program is dependent upon a coordinator with enthusiasm, up-to-date trade or business experience, and the ability to relate well to students, faculty, and the business community. Persons should be carefully chosen for such positions and encouraged to maintain their occupational skills through summer and/or part-time employment in their trade or business specialty.

Smaller high schools within ten or fifteen miles of one another might consider sharing the services of one teacher-coordinator. By scheduling cooperative training students into two-hour periods twice a week, a coordinator could teach two days in one school, two days in the other, and still have one full day plus half-time the remaining days for coordination. An example follows.

Period	Mon.	Tues.	Wed.	Thur.	Fri.
1	Preparation	Co-op Class	Preparation	Co-op Class	
2	Co-op Class	School B	Co-op Class	School B	
3	School A	Preparation	School A	Preparation	
4	COORDINATION				
5					
6					

The coordinator would be under contract to one school for salary and tenure purposes, with the second school reimbursing the first for half of the coordinator's salary (less the amount reimbursed from federal funds).

COLLEGE PREP.

THE PRE-TECHNICAL PROGRAM IN MACOMB COUNTY HIGH SCHOOLS.

The development of pre-technical programs at the senior high school level is one of the major changes which must occur if educational practice is to be brought into balance with technological change. The primary purpose of the pre-technical programs is the early identification and nurture of the high school student who can successfully prepare, by additional education, for highly skilled, technical, and semi-professional occupations. Although employment opportunities, in the mid-manpower range of the occupational spectrum are improving and expanding rapidly, the lack of specialized training closes these opportunities to the majority of new job-seekers today. Unsuccessful job seekers include the school drop-out and the non-specialized high school graduate, and may also include persons who have acquired college training of a general nature and are attempting to enter the work force at levels where specific job skills are required for employment.

The needs for skills in the economy and the earning needs of labor force entrants cannot be brought into balance by the continuation of the present haphazard mating of pupil aptitudes, school programs, and job opportunities. Tomorrow's high school student will need to be viewed much as a medical clinic staff might view a patient who has put the care of his health into their hands. The first step in this direction should be the development of programs of a depth and variety to accommodate the wide ranges of interest and ability which exist in every high school's student population. Improvement of vocational guidance services alone without the development of meaningful programs is comparable to improving medical diagnosis without corresponding advances in medical treatment. Two obvious and over-due activities are the upgrading of vocational education for the student seeking immediate job entry, and the development of pre-technical programs. The problems of vocational education and a recommended approach to their solution are detailed in other sections of this report.

The name "pre-technical" has been employed in other studies to define the high school programs which can offer adequate entry preparation for Community College technician training programs. The term is used in this report to describe all high school programs which have been designed to provide entry into a specific area of specialization in the Community College.

The six suggested high school-community college sequences which have been prepared for this report are not intended to be prescriptive, but rather to provide guidelines along which high school staffs and the Macomb County Community College staff can establish dialogs which will develop such programs tailored to the Associate Degree or certificate occupational programs of the Community College. Such program planning should involve the contributions of persons experienced in the appropriate occupational skills areas.

The units to be covered in the high school portions of the suggested Retailing and Marketing sequence and Food Service Supervision sequence have been identified because the course titles "Retailing" and "Foods" leave the purposes of the programs undefined. On the other hand, drafting, office occupations, electricity-electronics, and art are subject areas wherein existing programs provide a basis of general understanding.

The sample pre-technical high school programs have been written broadly enough to permit at least the more capable students these choices upon high school completion:

immediate job entry with some skills development,

further specialization in the Community College,

entry into a four-year college program.

Not all pre-technical programs will need to provide this flexibility. The accompanying samples have been so structured to demonstrate that the pre-technical, and even the vocational program, need not be closed-end programs, shutting off the student from moving upward or outward from his early career goals. The significant step of electing cooperative work-study experience or additional academic course work as preparation for more effective work in the Community College can be delayed until the 12th grade for undecided students.

The success of the pre-technical programs will be largely dependent upon the offering of alternate courses at various levels of rigor in mathematics, science, and communications. Students should be offered instruction at levels which are challenging, yet appropriate to their learning ability. Students should not be identified with a level or track, but rather placed in courses on their predictable ability to master separate subjects.

Most of the content of the pre-technical programs, as these are now perceived, can be provided by the staffs and the facilities of the truly comprehensive high school. Very small high schools, and some parochial high schools regardless of size, probably will lack the depth of staff and adequate facilities to provide instruction in all of the pre-technical programs. Considering that some portion of these programs will be the responsibility of each department within every high school, and that there will probably be about 36 public and 12 parochial high schools in Macomb County in the 1970's, rapid and adequate development of pre-technical programs will require some centralization. The proposed area Occupational Education Centers could provide instruction for some portions of the pre-technical programs, instruction in all of some pre-technical programs for small high schools, and the necessary coordination to effect pre-technical program development in each area of the County.

The development of the pre-technical high school programs is anticipated to yield these dividends:

FOR THE HIGH SCHOOL STUDENT.

* Opportunity to explore a career field early in the high school experience.

* Development of occupational skills through realistic learning experiences.

* Identification with a specific Community College program as an educational goal.

* Flexibility within programs which permits the student to change his goals without loss of time or academic standing.

* Instruction in academic subjects at levels which accommodate to the wide range of abilities which exists among students.

* Promotes the concept that education should continue beyond high school completion.

FOR THE COMMUNITY COLLEGE.

* Early identification and direction of students capable of success in the Community College occupational programs.

* The development of uniform acceptable standards in the high school pre-technical programs which will reduce the necessity of offering Community College instruction at many levels to accommodate to the varying preparations of the students.

A SUGGESTED HIGH SCHOOL - COMMUNITY COLLEGE SEQUENCE IN COMMERCIAL ART AND TECHNICAL ILLUSTRATING

	HIGH SCHOOL			COMMUNITY COLLEGE

* certain courses may be waived on the basis of student proficiency.

** additional courses should be provided for occupational specialization.

The 1965 high school age group in Macomb County is distributed as illustrated in the above graph. Combining the drop-outs and the general program students reveals that 41 of every 100 persons in the age group do not have goals for which school programs are available.

The development of high school pre-technical programs to identify and direct potential students toward Community College occupational programs will be the most significant curriculum change in the immediate future. The creation or expansion of meaningful high school vocational programs should reduce the proportion of drop-outs by half. The proportion of students preparing for a four year college is not expected to increase as the values of the Community College occupational programs become more generally evident. The second graph illustrates a practical distribution of the high school age population in 1975. More or fewer students may be following each of the high school programs than are indicated on the graph. This will be determined by the efforts which are made to improve educational opportunities. It is imperative that every effort be made to retain persons in school until high school graduation, that every student have a commitment to a career goal, and that the schools offer programs which can assist the student in achieving his goal.

CHALLENGE TO THE COMMUNITY COLLEGE

The community junior college is in a very real sense society's answer to the need for expanded educational opportunity. Millions of high school graduates of "middle level" ability need further education and training to fit them for careers within the spectrum of "middle level Manpower" -- in semi-professional and technical jobs. By 1970, one fourth of the nation's labor force will be employed in semi-professional and technical jobs which did not even exist in 1930.[1]

[1]Norman C. Harris, Technical Education in the Junior College, New Programs For New Jobs, (American Association of Junior Colleges, Washington D.C., 1964), p.19.

OCCUPATIONAL EDUCATION AT THE POST-HIGH SCHOOL LEVEL

Technological Change and Post-High School Education.

Technological innovations in industry since World War II have resulted in the development of new products, new materials, new processes, and new equipment. New businesses have been created out of these innovations and old businesses have reorganized to meet the competition and opportunities arising from these changes. Greater emphasis upon research and development has spread these technological changes into commercial, government, and institutional applications.

Technological innovations are stimulating a relentless demand for workers possessing highly-developed technical skills to service, operate, and adapt the mechanisms and processes of these changes. Further technological advances are dependent upon an available supply of technically competent persons to perform these functions. As indicated in the Labor Market Needs section of this report, an available supply of highly-skilled manpower stimulates capital investment in business enterprises. Job opportunities at all skill levels are created by an adequate supply of technical, semi-professional, and other mid-manpower workers.

The changing employment needs of the new technology have been stated by Professor Norman C. Harris of the University of Michigan:

> "Professional jobs, making up six percent of the labor force in 1930, will probably constitute 12 percent by 1970. At the other extreme, unskilled, semi-skilled, and service jobs, which together accounted for 56 percent of the labor force in the 1930's will by 1970 decrease to only 26 percent of the labor force. But the really significant changes in our labor force, and in society in general, have occurred at the level of the semi-professional and technical; the managerial, business, and sales; and the highly skilled jobs. These jobs taken together, will account for over 50 percent of the labor force by 1970."[1]

Community colleges are developing specialized curriculums to meet this need and to provide employability in an economy characterized by technical skills. The current unemployment rate for 16-24 year old high school graduates is over twice the rate experienced by the total work force. Although the rate of unemployment is high among all young people, it is far higher for the high school dropout than for the high school graduate. The waste incident to our failure to provide education for occupational entry is exorbitantly expensive, socially and individually.

[1]Harris, "The Community Junior College--A Solution to the Skilled Manpower Problem," in Higher Education in an Age of Revolution, ed. G. Kerry Smith (Washington: Association for Higher Education, 1962), p. 111.

The dependence of an area economy upon an adequate pool of skilled manpower has been pin-pointed by Dr. M. D. Mobley, Executive Secretary of the American Vocational Association:

> "If you want to determine the status of any state in the nation during the '70's, look at their activities in the field of vocational and technical education in the '60's. The states that lag behind in vocational education in the '60's will lag behind in economic growth in the '70's."

The extent of the need for post-high school occupational education programs can be seen from an examination of the anticipated change in the nature of the national economic activities from 1960 to 1975.

Economic Activity	1960-1975 Increase
Professional and related services	53.4%
Public administration	53.6
Finance, insurance, real estate	46.7
Construction	45.9
Business and repair services	41.4

State-wide, community colleges are expanding to meet the increasing needs for post-high school education. For the ten years from 1955 to 1965, state community college enrollments increased from 13,652 to 61,275.

Local Need.

The need for community college occupational training in Macomb County has been measured by a number of activities of this Survey. Based upon these investigations, the demand for occupational preparation in the next decade will challenge the planning resourcefulness and tax the financial resources available to Macomb County Community College. By 1975, the number of 18 and 19 year olds in Macomb County will be approximately 30,000. Table C-1 indicates the County population in the 18-19 age group at five year intervals.

Table C-1

MACOMB COUNTY POPULATIONS IN THE 18-19 AGE GROUP
1965-80

Year	Population
1965	15,332
1970	20,412
1975	29,677
1980	33,621

PROJECTED PERCENT OF CHANGE IN EMPLOYMENT OF
WORKERS IN MAJOR OCCUPATIONAL GROUPS
UNITED STATES AND DETROIT AREA

Provided with educational opportunities realistic to their capacities and needs at costs within reach of most of the population, Community College occupational programs could attract between 10,000 and 20,000 of these 18 and 19 year olds. Additional thousands of older persons will look to the Community College for opportunities to upgrade their employment skills as industry becomes increasingly reluctant to invest the capital required to provide this training. The accompanying graph compares the anticipated local and national change in the nature of the work force. This training must be provided if the local economy is to expand sufficiently to offer employment to the record number of young persons who will enter the work force during the 1965-1980 period.

The existence of 68 privately operated trade, technical, and business schools in the Detroit area is evidence of the pressing demand for post-high school occupational education. These private schools enroll more students than all public post-high occupational programs in the three County area. Private occupational training charges range as high as $2,000 a year. Equity indicates that a person desiring training in a socially-useful occupation for which definite employment opportunities exist should have access to a publicly-supported training program.

In response to a Survey questionnaire, one of every three parents of eighth grade students in Macomb County definitely plans upon an occupational curriculum in the Community College for his child. The actual demand may be greater for parental hopes become increasingly realistic as the child's progress in school gives further evidence of his true potential. Seniors in Macomb County high schools indicate a very strong desire for continuing their education. Macomb County Community College, or a technical, trade, or business school, is the first choice of four of every five seniors not in a college preparatory program. When student academic ability is considered, boys and girls placing in the middle and bottom thirds of their graduating class chose the Community College, or other occupational training, over the four year college by a three to one margin.

Table C-2

SENIORS' PLANS TO ATTEND COLLEGE

	Yes	Probably	Probably Not	No	Don't Know
Boys - Total	49.4	16.5	7.4	15.0	11.7

Middle 1/3	51.9	30.9	17.2
Bottom 1/3	47.3	19.6	33.3

When asked about their own interest in further education, three of five parents of eighth graders indicated interest, with more than twice as many desiring job improvement education as are interested in working for a college degree.

Three of every five Macomb County employers who responded to a questionnaire seeking their opinions of educational preparation for employment believe that high school graduates are not adequately prepared for entry employment. More than half of the employers who indicated a willingness to support improved occupational education programs recommended more and stronger community college programs. Employer interest in school programs for upgrading the occupational proficiency of their present employees is strong. Table L-22 indicates this interest by types of training programs.

The suitability of the community college to meet the increasing needs for occupational education is evidenced by the rapid growth of such programs in community colleges in Michigan and throughout the nation.

Mr. John W. Lehman, Regional Director, Bureau of Labor Statistics, was requested by our Survey to comment on the future employment outlook for the Detroit area. The following statement is taken from Mr. Lehman's reply:

> "At the junior college level there should be considerable demand for engineering and science technicians to go into research and development, to become factory foremen, and for highly sophisticated repair and maintenance work.....Health service occupations will offer many good job opportunities, particularly for women. There is no end in sight to the shortage of registered professional nurses and licensed practical nurses. About 80 percent of the professional nurses are currently being trained in diploma schools

operated by hospitals, but an increasing number of junior colleges are entering this field. Dental hygienists and dental laboratory technicians are also expected to be in demand. Business graduates of two-year college programs should continue to be sought. Women graduating from executive secretarial programs should readily find jobs. The tremendous demand for accountants of all types is expanding job opportunities for two-year accountants. The electronic data processing field will offer many opportunities. More and more junior colleges and technical institutes are offering computer programming and console operation in their curriculum. Occupations in the expanding public sector should not be overlooked."

Occupational Enrollments at Macomb County Community College.

Terminal occupational programs enroll approximately 22% of the 7183 students enrolled in Macomb County Community College. Enrollments in industrial technology courses offered by the College have increased from 300 to 1440 in the four years from 1961 to 1965. Table C-4 indicates enrollments by occupational programs in September, 1965.

Although 40% of all Macomb County Community College students take some course work in the occupational curriculum areas, only one of every five full-time students is following an occupational program. Almost half of all part-time students are enrolled in occupational programs.

Apprentice programs serve apprentices in 18 manufacturing trades and one construction trade, bricklaying.

Associate in technology degree students (identified as technicians in Table C-4) who have accumulated 15 or more credit hours are distributed by programs as follows:

Auto Body Design	29%
Tool, Die and Fixture Design	27%
Special Machine Design	12%
Fluid Power	10%
Technical Illustrating	10%
Metal Processing	8%
Electrical	4%

This Committee recommends that, excepting for adult education programs offered by the K-12 school districts, all public vocational-technical education of a post-high school level in Macomb County be provided by Macomb County Community College. The following reasons are the basis for the committee's recommendation:

1. Macomb County Community College is already established and financed by the taxpayers of the County, and its programs and facilities are available to all residents.

2. Macomb County Community College has demonstrated a willingness and ability to develop meaningful occupational programs in a limited number of occupational areas.

3. Macomb County Community College is recognized by the State Department of Vocational Education as an area skills center and is eligible to secure federal and state grants on that basis.

4. Macomb County Community College is accredited by the Michigan Commission on College Accreditation and is eligible on that basis to secure federal and state grants.

5. Macomb County Community College has achieved recognition by senior institutions for the quality of its programs and the performance of its graduates.

6. Studies of the local, regional, and national labor outlook indicate that the greatest employment opportunities for our citizens will occur at those occupational levels for which the community college occupational programs are specifically aimed.

Occupational Curriculums.

Occupational programs are designed for the development of competence to perform adequately in a skills area which can be utilized for employment at a significant level, and thus curriculum content is derived from the skills and knowledge required for employment. The present trade and technical, business, and office occupations programs of Macomb County Community College have been derived in this manner and should be strengthened and expanded as evidence of local need and pupil interest warrants. The College should investigate the suitability of a wide range of additional offerings to the needs of our local economy and of our citizens who desire occupational competence. The study of the area economy and its anticipated development, and an analysis of the several interest measurements taken by the Survey indicate that the following occupational programs warrant investigation by the College. The inclusion of these programs is not an indication that the Survey has identified a local demand sufficient to justify the offering of each of these programs, nor that other areas are not suitable for investigation. The number of programs under development should not exceed the College's capacity to do so in an orderly manner and to insure the quality of each. Each of the following programs offers opportunities for entry employment in a number of trades or occupations and at different levels of competence.

Agriculture and Horticulture
- Agri-business
- Agronomy

Development of Curriculum.

Occupational curriculum should be envisioned as fluid and exploratory, limited only by

the employability of graduates,
the interests of potential students,
the financial capacity of the College,
and the social usefulness of each program.

Curriculum should be developed with the maximum participation of advisory committees of persons knowledgeable in the skills requirements of occupations, and preferably, active in the exercise of those skills.

Curriculum revision must be continuous, not periodic. A vigorous curriculum is characterized by courses and programs under constant upgrading, with new programs being developed, programs of diminishing need being phased out, and many new programs being investigated. To promote this vitality, membership on advisory committees should be on a short-term basis.

Occupational curriculum should be under continuing evaluation. The primary evaluation is the employability of the student trained in a program. The College should seek the evaluation of programs by former students as an integral aim of follow-up studies of these persons. Evaluation should also be sought periodically by outside experts, and by professional accrediting associations.

Levels of Instruction.

Students vary in their capacity to perform in different curriculum areas. When courses of varying rigor might satisfy a requirement of the student's program, the student should be encouraged to select that course which is most challenging to his own aptitude so that his preparation will be as broad as possible. Presumably, this choice of courses will be available in communications, mathematics, science, social studies, and in technical curriculum areas.

Suggested Division of Credit for

TWO-YEAR POST HIGH SCHOOL TECHNICAL CURRICULUMS

Identification of Programs.

Occupational programs should be flexible and broad enough to achieve competence in a broad area of skills rather than in a single trade. Programs vary in content, length, and rigor according to the knowledge and skills requirements of the occupational area.

a. Programs designed to prepare the individual for engineering technician occupations are characterized by intensive mathematics and science requirements. Mastery of these programs will culminate in the Associate in Technology degrees. Students enrolled in these programs will have given evidence of adequate performance in college preparatory or pre-technical curriculums in high school.

b. Other occupational programs in the Community College which lead to the Associate degree may not require the engineering technician's proficiency in mathematics and science, but will be characterized by similar depth in other curriculum areas.

c. Trades preparation programs are designed to achieve employability in occupations which require a high degree of manipulative skills development and less academic preparation than that required for the Associate Degree.

d. Apprentice related training programs should be developed with the participation of the employer and, if applicable, the Federal Bureau of Apprenticeship and Training and the trade unions concerned.

e. Preparatory programs should be offered to remedy academic deficiencies which would prevent success in the regular programs. These would serve, among other persons, school graduates lacking necessary preparatory courses and older persons whose basic educational skills have deteriorated through disuse.

f. Special programs of varying length designed to meet the immediate and special needs of particular groups. Examples would include upgrading courses offered on an employer's premises for his own workers or a special class to clarify the applications of a new law for persons needing this information.

g. Continuing education courses and programs in occupational areas should be offered when there is evidence of a need for programs of a post-high school level.

Relationship to the Secondary Schools.

Occupational programs developed to levels which can achieve employment competence and taught by dedicated teachers possessing practical experience and teaching proficiency can only succeed if student enrollments are sufficiently high to maintain these programs.

The number of persons graduating from Macomb County high schools, 6,500 in 1965, will increase annually to more than 16,000 by 1975. At least half of these persons could be enrolled in Community College occupational programs at great profit to themselves and the community. However, potential students must be identified early in their high school careers, and counseled into courses which will prepare them for success in a community college program. Although specific data is not available, an examination of fall enrollments in occupational programs in the Community College indicates that less than one tenth of the 1965 Macomb County seniors are enrolled in such programs in the College. If the occupational programs of the Community College are to be of maximum service to the community, a great deal of effort will be required to convince high school students, their parents, teachers, and counselors of the value of these Community College programs. This can be accomplished by cooperative effort between the Community College and the secondary school.

Curriculum Coordination.

The Community College should cooperate with the secondary school staffs to determine the content and level of pre-technical programs. These pre-technical programs will consist of courses in mathematics, science, language and graphic communications, and basic courses in an occupational area. The pre-technical programs would be offered in grades 11 and 12 with the specific purpose of preparing high school students for success in the Community College occupational programs. Pre-technical programs which are part of a well-defined sequential program terminating in the Community College may be eligible for vocational reimbursement within the State Plan.

A close relationship should be effected between the Community College occupational programs staff and the counselors in the secondary schools so that the latter group can be most effective in counseling students concerning the opportunities and program entry requirements in the Community College.

The staff and more comprehensive facilities of the Community College should be made available to the secondary vocational staffs in the form of assistance in the preparation of instructional materials and the development of secondary vocational curriculum.

The Community College should undertake active programs to publicize the opportunities of its occupational programs directly to secondary school students and their parents.

High school students who can profit from instruction in Community College courses should be admitted for advanced work for College credit upon request of the appropriate secondary authority.

The Community College should initiate such reports to the secondary schools on the performance of their graduates as will be of assistance to the secondary schools in assessing and upgrading their services.

Adult vocational courses and programs of the Community College should be coordinated with the secondary school adult education programs to provide the maximum service to the public and to avoid harmful overlapping of programs.

Recognizing the limited facilities for the preparation of industrial arts and technical teachers in the teacher training institutions, the College should make available its specialized laboratories for County-wide in-service teacher training, preferably in degree-credit courses arranged in conjunction with one of the state universities.

The College should study the advisibility of maintaining and expanding arrangements for the use of secondary vocational-technical laboratories both in the existing high schools and in the proposed area occupational education centers for those portions of the Community College programs for which secondary facilities are adequate and available.

Coordination With Other Post-secondary Institutions.

Macomb County Community College should undertake cooperative study and planning with other Community Colleges in the Detroit metropolitan area to coordinate calendars and schedules and to avoid duplication of technical programs wherein high instructional costs and low potential enrollments would make such duplication unwise.

Macomb County Community College should give every assistance to four year institutions which seek to evaluate the credits which have been earned at the Community College. However, the occupational programs of the Community College should be designed for employability only; to attempt to achieve transfer of credits as a major goal weakens the flexibility, the local orientation, and the job relatedness of the occupational programs.

Student Services.

Counseling of students in occupational programs or seeking admission to these programs should be entrusted to persons possessing occupational experience as well as adequate preparation and proficiency in counseling techniques. Extensive aptitude testing services should be available for the student seeking program guidance.

Cooperative work-study experiences should be an integral segment of the occupational program of all full-time students. The work experience should be directly related to the occupational nature of the student's program and fully supervised to assure maximum educational values and to safeguard the welfare of the student. Cooperative work-study experiences should be formalized by written contracts among the student, the employer-trainer, and the College.

Terminal job-placement in his field of preparation should be sought for every student on an occupational program. This will require the commitment of College personnel on a full-time basis. Part-time job referrals for in-school students should be a College activity in order to help students maintain themselves while enrolled in school. Former students should have access to the College placement services.

Follow-up studies of occupational program graduates should be a continuing activity. The College should attempt to determine job placement, job retention, job satisfaction, advancement, and the relatedness of instruction to job requirements as one basis of curriculum evaluation.

Faculty.

The Community College should recognize that superior instruction is indispensable to adequate occupational preparation. The successful occupational teacher possesses significant depth and breadth in practical occupational experience in addition to teaching proficiency. Salaries will need to be relatively high to attract and hold such teachers against the competition of other educational institutions and private industry.

The practice of employing expert persons from business and industry to teach within their respective skills areas has been an outstanding feature of the Macomb County Community College occupational programs, and should be continued.

Instructional Facilities and Equipment.

Realistic occupational programs require a realistic learning environment. Some occupational programs are specifically designed to meet the needs of students who are object-oriented or spatially-oriented, rather than abstraction-oriented. Learning laboratories must include equipment which is as nearly comparable to that employed in industrial and commercial practice as budget limitations will permit. However, the cost of some highly-sophisticated equipment is prohibitive, and, in such cases, simulative or miniaturized equipment may be advantageously employed. Rapid obsolescence of certain types of instructional equipment may preclude its acquisition by the College. Programs which require student experience in the manipulation of such equipment should be developed so that this phase of the program can be accommodated in a cooperative work-study plan utilizing the equipment available in the industrial or commercial training station.

Financing Occupational Programs.

Macomb County Community College, in cooperation with the other community colleges in Michigan, should endeavor to persuade the Legislature to recognize the unique needs and contributions of occupational programs and the high costs of maintaining quality in these programs by more adequate state-derived financial support.

This increased support should be based upon a consideration of the varying costs of different programs and should provide incentives for the exploration of new curriculum areas.

The Community College should seek the maximum reimbursement of occupational programs under existing state and federal statutes where such reimbursement can be obtained without sacrificing desirable program goals. No fewer than thirteen federal acts provide support for vocational-technical education; of these, the following appear to have provisions applicable to the community college:

PL 347 (Smith-Hughes Act, 1917)
PL 586 (George-Barden Act, 1946)
PL 85-864 (National Defense Education Act, 1958)
PL 87-27 (Area Redevelopment Act, 1961)
PL 87-415 (Manpower Development and Training Act, 1962)
PL 88-204 (Higher Education Facilities Act, 1963)
PL 88-210 (Vocational Education Act, 1963)
PL 88-452 (Economic Opportunity Act, 1964)

Private sources of financial assistance and instructional equipment should be explored fully as a means of enriching the occupational programs.

PARENTS' INTEREST IN THE FUTURE EDUCATION AND THE OCCUPATIONAL CHOICE OF THEIR EIGHTH GRADE CHILDREN

Parents of eighth grade students in both public and private schools in Macomb County were asked to indicate their plans for further education of their youngsters. Over 38 percent of the parents, when asked how certain they were that their youngsters would attend college, indicated that their child would not attend college, or were at least uncertain. The remainder, 61.6 percent, said their eighth graders would "definitely" or "probably" attend college. Only one in three, however, expects his child to graduate from a four-year college or university.

When presented with the information that by the time their children graduate from high school Macomb County Community College will have classes, both occupational and pre-professional, within easy driving distance, parents were considerably more inclined to consider post-high school education than when simply asked to choose between their youngsters attending college and not attending college.

When occupational programs of the college were named, only 12.7 percent of the parents said their children probably would not go beyond high school.

An interesting comparison of responses follows:

When asked, "In view of your child's scholarship record so far, how much further education do you plan for him (her) to complete," parents responded in the following manner.

But --- when advised that by the time their child graduates from high school, Macomb County Community College will offer both pre-professional and occupational programs within easy driving distance, parent's attitudes concerning post-high school education changed considerably.

When informed about educational opportunities offered in the community college, parents not only identified more strongly with the community college, but indicated as much interest in career programs as they did in pre-professional transfer programs. A breakdown of the 46.7 percent response favoring community college education in the chart above shows a slightly stronger interest in occupational programs.

The variation in responses, depending upon the parent's definition of "college", is evidence that many persons are unaware of the various educational objectives of the community college. Such evidence points to the importance of an intensive public information program concerning the educational opportunities available.

Parent responses also reinforce evidence gathered elsewhere that availability of college is the strongest determinant of college attendance. College attendance among residents of Macomb County has been lower than in other urban areas because it was less accessible.

One of four families who expect their children to attend college has a definite savings program to finance the college education. More than half (56.6 percent) say they will help their children work their way through college.

Only 13.5 percent of the parents who expect their children to go to college said that they regard a low cost community college program as an important factor in the attainment of this goal.

Occupational Interest.

Parents reported that 53.5 percent of their eighth grade children, (60.3 percent of the girls), have started making occupational plans. Two of three parents concur with the choices of their children.

Of the skilled trades, auto mechanic, electrician, and machinist occupations were of greatest interest among the parents of boys, while girls' parents expressed the greatest interest in practical nursing and cosmetology careers.

Plumbing, printing, and welding are trades which find least favor with parents, and scarcely more popular are radio and television repair, air-conditioning and refrigeration, and commercial cooking.

Among the semi-professional or technical occupations, parents of boys expressed preference for drafting, mechanical technology, electronics, and data processing. Among parents of girls, careers most popular are secretarial (44.1 percent) and nursing (30.2 percent). Little enthusiasm is shown for the occupations of surveying, banking and retail sales by parents of either boys or girls.

If these preferences reflect parents' opinions concerning job opportunities of the future, they suggest that parents, as well as students, need considerably more information about present and projected labor market needs. Some occupations in which parents indicate the least interest will have increasing need for trained workers.

The second largest industry group in 1962 was retail and wholesale trade, and it continues to be a "growth" industry, but only 2.2 percent of the parents indicated an interest in their youngster preparing for a career in retail sales.

According to the United States Chamber of Commerce, office occupations provide 11 percent of male high school graduates with their first jobs, and it is predicted that between 1960 and 1975 office employment will climb by approximately 45 percent, yet only 2.1 percent of parents indicated an interest in their eighth grade boys preparing for such an occupation.

Financing College Education.

Few parents are planning now to meet the costs of their children's college education. Three of every four responding parents are not considering this problem now. This may reflect optimism about future economic conditions, or unawareness of the costs of maintaining a student in college which may prevent some youngsters from attending college.

S U M M A R Y

I. Macomb County is unique in its agricultural specialization, rapid urbanization, manufacturing productivity, and leadership in automotive styling and engineering. Until recently, County residents turned to the city of Detroit for much of their needs in banking, retail sales, hospital care, professional services, college education, press and radio, entertainment, and recreation. Today, a fast-diversifying local economy makes these services available within the County.

These exceptional and rapid developments are overshadowed by another characteristic which has drawn nation-wide notice to Macomb County - the phenomenal growth in population which has occurred during the past thirty years and which will continue into the foreseeable future. An exceptionally young and fertile population will contribute to the continuation of this growth, but the present resident population and continued in-migration by themselves will double the 15 to 19 age group in the County by 1975. High school capacity will need to be more than doubled, for a greater proportion of the population will continue in school, at least until high school completion. County population growth will overtax the resources of those school districts which will experience the bulk of the future increases. The predictable result will be curtailed and starved school programs. Yet this need not and should not occur, for the valuation of Macomb County's property makes it one of the wealthiest counties in the nation.

The demands upon the Community College are not so readily predictable. These will be measured by the resourcefulness of the college staff to develop realistic occupational programs and the willingness of the public to provide the needed financial support. The latter is less a problem than the former, for the Community College is an area school with the needs and resources of the entire County available for Community College development.

II. The most important local influence upon the Detroit area economy may be the determination and ability of public education to provide training in the advanced skills which are required in the increasingly complex local economy. The mobility of ideas and people creates regional competition for the emerging industrial, commercial, and government investments and installations. An educational system which can supply the area needs for semi-professional, technical, and mid-management skills will also insure job opportunities at all skill levels.

III. The problem of vocational education in Macomb County high schools is more critical. One of every five persons who enters high school terminates his education before graduation. One of every four in-school persons is not identified with a career goal for which a school program is available to him. While one of every three high school students is following a plan designed to prepare him for entry employment, only one-third of these vocational students are enrolled in a program which meets the state minimum for reimbursement. Evidence gathered by this Survey indicates that the local school district cannot, on present resources, provide true vocational education which will meet the skills needs of the emerging technology.

Of the possible alternatives, a continuation of the presently inadequate services is unthinkable, for this policy ignores the accepted principle that the public school has an obligation to assist each person to attain his socially acceptable career goals. A sharing of resources, leadership, and staffs to serve vocational education needs on an area basis is the legitimate and logical alternative, and one which has found wide acceptance in other states. Offering at least the more complex and expensive vocational programs on an area basis will insure the quality of such programs and give equal educational opportunities to all residents of the County.

High school students capable of success in the advanced occupational programs in the Community College will need to be identified and counselled into high school programs which are preparatory to the Community College programs.

IV. Local education must accept quality control as an integral function. Students must be provided with objective information about their own aptitudes and how these can be matched with opportunities within the occupational spectrum. Follow-up studies of graduates and early school leavers, the assessments of employers, and the active participation of occupationally-qualified persons must be incorporated into program development and evaluation.

V. The occupational education needs of the entire County must be the concern of all local education institutions. Early school leavers must be identified and brought back into the educational stream at levels appropriate to their abilities. Opportunities must be created for the mentally and physically handicapped, and displaced workers to acquire occupational competence. Schools must cooperate with other government agencies to serve the occupational training needs of all persons for whom the schools' services are appropriate.

The State provides leadership
and financial assistance.

The Detroit Metropolitan Area
offers job opportunities.

Macomb County has the responsibility
for providing educational opportunities.

*VOCATIONAL EDUCATION; *SURVEYS; *EDUCATIONAL NEEDS; STUDENT ATTITUDES; HIGH SCHOOL STUDENTS; PARENT ATTITUDES; EMPLOYER ATTITUDES; EMPLOYEE ATTITUDES; PROGRAM IMPROVEMENT; EDUCATIONAL INTEREST; QUESTIONNAIRES
HILLSDALE COUNTY, MICHIGAN

Questionnaires were used to collect information from 11th grade students, parents of 4th and 11th grade students, non-management and management personnel in industry, and county school administrators to assist in improving existing programs, and determining future needs in vocational-technical education. Responses from 488 high school juniors indicated that (1) 30.3 percent will seek a college degree, and (2) 74 percent plan post-secondary education. Responses from 226 parents of high school juniors indicated that (1) 60 percent favored college training for their children, and (2) 71 percent will leave the choice of post secondary education up to the children. Responses from 398 parents of 4th grade students relating to the educational desires for their children were similar to the responses of the parents of 11th grade students. Responses from 543 non-management personnel indicated that (1) 62 percent felt no additional occupational training was necessary for their present work, and (2) 70 percent would like additional training if it were available locally. Responses from 73 employers indicated that (1) 39 percent felt there should be an expansion of vocational programs in the high schools, (2) 25 percent favored creating an area vocational technical school, and (3) 18 percent preferred establishing programs in a post secondary institution. Some of the 10 recommendations are: (1) Secondary schools should strengthen their vocational programs, (2) Adult vocational education should be expanded, and (3) Cooperative education should be emphasized. ACKNOWLEDGEMENTS

The Hillsdale County Intermediate Board of Education is deeply indebted to the members of the Hillsdale County Area Vocational Study Committee who spent many hours in collecting and interpreting data, in interviewing numerous representatives in business and industry, and in writing a comprehensive and readable report.

The Board is especially grateful for the contribution made to this study by the local school districts of the county. (Camden-Frontier, Hillsdale, Jonesville, Litchfield, North Adams, Pittsford, Reading and Waldron.) Without their financial support and general cooperation, this study would not have become a reality.

The Board wishes to express special appreciation to David T. Steel, Chairman of the Study Committee, and to Robert E. Hayes, Secretary of the Study Committee, for assuming the responsibility for the preparation of this document.

INTRODUCTION

It has been said that the chief purpose of education in the United States should be to preserve, promote, and refine the way of life in which we as a people believe. In order to realize this purpose, then, education must be tailored to meet the needs of the people.

It is realized that a substantial percentage of the high school and adult population has occupational needs that more realistically could be met by other than formal college training. It is for this approximately sixty-five percent of local high school graduates who do not continue their education in formal institutions that technical and vocational education must be provided. Significant, too, is the fact that during the last four years nearly 400 local youth between the ages of 16 and 19 have terminated their contact with school prior to graduation from high school, contributing to a major social and economic problem - the school drop-out. Finally, our urban, industrial society is continually confronted with the problems created by automation. Regular retraining and job skill upgrading will be necessary if an economically healthy and progressive society is to be maintained. It is to these major concerns that consideration is given.

Historically, the importance of strong technical-vocational programs has

been recognized. Because of the shortage of agricultural workers and skilled craftsmen prior to World War I, Congress passed the Smith-Hughes Act (1917) to stimulate the teaching of certain vocational subjects. More recently, the George Reed Act (1929), the George-Ellsey Act (1934), the George-Dean Act (1936), and the George-Barden Act (1946) (all supplemental to the Smith-Hughes Act), point to the concern that Congress has experienced relative to vocational programs. The passage of the Practical Nursing Act (1956), the National Defense Education Act (1958) and the Vocational Education Act of 1963, are the latest indication of congressional concern.

The definition of purposes for vocational education as first set forth by the United States Office of Education in 1949, can well serve as a guideline, namely:

> "To provide training, to develop skills, abilities, and understandings, attitudes, working habits, and appreciations, and to impart knowledge and information needed by workers to enter and make progress in employment on a useful and productive basis."

While it is apparent that public schools are discharging their responsibility within the limits of their present ability, it can be demonstrated that the purposes outlined above are not being fully realized. Local vocational education programs are limited and in need of improvement and expansion if schools are to provide worthwhile technical-vocational programs. The question then becomes, wherein lie the weaknesses? How is it possible to

best take advantage of strengths? What are local vocational needs? What types of programs may best meet these needs? What type of structure should these vocational programs take?

Hillsdale County Intermediate School District recognizes these concerns and addresses itself to the problem. It is believed that any solution begins with a careful study of the problem.

Purposes

This technical-vocational cinnuttee was formed both in conjunction with the Hillsdale County Community College Feasibility Study and with the Hillsdale Area Vocational-Technical Study. It's responsibilities were two-fold:

1. To assist the community college study groups in the determination of the kinds of vocational programs a community college might provide.
2. To conduct an area study of vocational-technical programs (emphasizing grades 11-14) in Hillsdale County with the hope that from this study the purpose of PL 88-210 (Vocational Education Act of 1963) could be realized. Specifically, the purpose of this act appears to be (Section 1):

" . . . to authorize Federal grants to states to assist them to maintain, extend, and improve existing programs of vocational education, to develop new programs of vocational education, to provide part-time employment for youths who need the earnings from such employment

> for continuing their vocational training on a full-time basis, so that persons of all ages in all communities of the State - those in high school, those who have completed or discontinued their formal education and are preparing to enter the labor market but need to upgrade their skills or learn new ones, and those with special educational handicaps - will have ready access to vocational training or retraining which is of high quality, which is realistic in the light of actual or anticipated opportunities for gainful employment, and which is suited to their needs, interests, and ability to benefit from such training."

Attention was particularly focused upon grades 11-14. The essence of the committee's obligation, then, was to examine the vocational programs and vocational needs in Hillsdale County and to suggest ways to meet the needs. The committee was formed with the intention that its members would represent a cross section of geographical areas, interests, abilities, and backgrounds.

Realizing that if the purposes of the study were to be met, the vocational technical committee must attend to such necessary arrangements as statement of objectives, an organizational pattern and a division of responsibility. Such a list of objectives follows:

(a) Provide a written report based on an extensive study of vocational programs and needs to serve as a guideline in improving vocational education in Hillsdale County.

(b) Provide an abstract of this report for use by the Hillsdale County Community College Feasibility Study Committee.

It was further decided that in order to carefully study the Hillsdale County

Vocational-Technical area, various aspects of this area would first need to be delineated and then focused upon. These aspects appeared to be:

1. Present public and private school practical arts and vocational programs (curriculum, facilities, equipment).
2. Business and industrial interests and concerns regarding vocational-technical programs in Hillsdale County.
3. Parents' vocational interests and aspirations for their children and for themselves.
4. High school students' interests and aspirations.
5. Employed labor-oriented persons' interests and opinions relative to vocational programs in Hillsdale County.

Methodology

Circulation of questionnaires was deemed to be most efficient in examining programs, in ascertaining interests and opinions, and in detecting parental aspirations for children. Questionnaires were then designed and circulated to the following groups: (See appendix for questionnaires)

(a) Parents of all 4th grade students in Hillsdale County

(b) Parents of all 11th grade students in Hillsdale County

(c) All 11th grade students in Hillsdale County

(d) Non-management personnel in industry (where such was permitted by management)

(e) Management in industry, retailing and professions

(f) School administrators in Hillsdale County

Following this distribution, consultants in the several vocational areas were contacted and asked to appear before the committee to discuss their field. It was hoped that information not readily available through questionnaires could be assembled for committee use. Again, the committee expresses its appreciation to these consultants for their time and effort in sharing their concerns and experiences. Valuable information was collected.

Following the discussion sessions and the tabulation of questionnaire results, each of the vocational areas: 1. Agriculture, 2. Business Education, 3. Home Economics, 4. Distributive Education, and 5. Industrial Education, were carefully analyzed in regards to: (a) Present and existing programs, (b) Future needs, (c) Recommendations for improvement, and (d) Suggestions for implementing the recommendations.

These final recommendations were compiled into a summary and to these recommendations were added an introduction and relevant background information. Here, then, are the results of nearly six months' study.

GEOGRAPHY AND GENERAL ECONOMY OF HILLSDALE COUNTY

Location

Hillsdale County is one of the southernmost counties in Michigan. It has 601 square miles of area, with 384,640 acres. It is bordered on the south by Williams County, Ohio; on the west by Steuben County, Indiana, and Branch County, Michigan; on the north by Calhoun County and Jackson County; and on the east by Lenawee County. Hillsdale is located within favorable driving distance to several larger population and business centers, as indicated below:

Distance from Hillsdale to:

Jackson, Michigan	39 miles
Battle Creek, Michigan	54 miles
Lansing, Michigan	68 miles
Toledo, Ohio	69 miles
Kalamazoo, Michigan	77 miles
Detroit, Michigan	95 miles
South Bend, Indiana	95 miles
Chicago, Illinois	183 miles

Topography

The county as a whole has gently rolling or moderately hilly topography with elevations ranging from 900 to 1300 feet, with the greater part varying from 1000 to 1200 feet above sea level.

Roads

Hillsdale County is served by U.S. Route 12 traversing east and west through the north-central part, and U.S. 127 running north and south on the eastern edge of the county. It is also served by State Routes M-34 from Hillsdale City, through Osseo and Pittsford to the east; M-49 from Litchfield south to Camden and the southern border of the county; and M-99 from the northwest edge of the county through Litchfield, Jonesville, Hillsdale and to the south-central border of the county with direct access to the Ohio Turnpike. M-99 is in the process of redevelopment to a Class A highway and is scheduled for completion in 1966. There are 1269 miles of roads in the county of which 130 miles are State Trunk Line.

Transportation

Although no longer a center of rail transportation as it once was, Hillsdale City still has railroad service on a daily basis, with other areas in the county being served intermittantly. A few communities are now without rail service. Passenger services have been discontinued. Most towns in the county are served by truck lines, with terminals in Hillsdale and Jonesville. The Detroit-Chicago Greyhound Bus Line operates on U.S. 12 with a terminal in Jonesville and service in both directions daily.

The largest airfield in the county, with a capacity to serve multi-engine aircraft, is located in Hillsdale. This municipal airport, while serving local

fliers, also offers air taxi service and is used for delivery of light shipments for industry.

Political Subdivisions

Hillsdale County contains eighteen townships. The county seat is Hillsdale, the largest city, with a population of 7,629 at the time of the 1960 census. Reading is also incorporated as a city. Incorporated villages are: Allen, Camden, Jonesville, Litchfield, Montgomery, North Adams, and Waldron. (See population charts on the following pages.) Dividing the county in quarters, the population for the northwest quarter is 15,664, northeast quarter 5,854, southwest quarter 7,473, and the southeast quarter 6,235. Total population for townships, villages, and cities is 34,786.

Natural Resources

Hillsdale County is rich in many resources. The county has reasonably good soil, ample water supply at present, mixed hardwood woodlands, oil, gas, and other natural resources. Most of the available surface water has its origin within the county, and present lakes, ponds, and impoundments total approximately 4300 acres or a little over one percent of the total land area of the county.

There are some 44,000 acres of commercial forest land in the county (11.4% of the total land area) comprised primarily of hard maple, beech, cherry, ash, red oak, soft maple, hickory and other trees in lesser amounts. At the

present, there are approximately 200 producing oil wells located essentially in the north-central portion of the county.

Education

Hillsdale County has at present eight K-12 school districts. In addition, there is St. Anthony Catholic Elementary School, Hillsdale; a small Seventh-Day Adventist elementary school; an Amish school; the Manor Foundation, a private school for mentally handicapped boys in Jonesville; and Hillsdale College, a four year liberal arts college.

In addition to facilitating cooperation between the local public schools and the State Board of Education, the Intermediate School District, in cooperation with local school systems, operates the Special Education Programs. These programs include special services in the areas of Visiting Teachers for emotionally or socially disturbed students, speech and hearing services, diagnostic and psychological services, a program for trainable mentally handicapped children, and programs for educable mentally handicapped students administered by the local school districts.

Population

The largest population recorded in the county was 34,742 in 1960. This is a continuation of a 30 year growth period which has finally recouped and surpassed the losses of the preceeding 50 years. Compared with neighboring

counties, Hillsdale County's growth has been slow, but relatively consistent. In general, the areas near the city of Hillsdale have increased more than the more rural areas. The number of farms have decreased and in 1960, there were 2,526 farms in the county, the average acreage being 127 acres per farm. 83.5% of the land area is comprised of farmland compared to the state average of 40.5%. The county is primarily rural with 21.9% urban, 29.4% rural farm, and 48% rural non-farm residents.

The census of population indicates that Hillsdale County is high in number of school years completed as the median is 11.4 years of education as compared to the state median of 10.8 years. However, the school drop-out rate is 17.9% of 16 and 17 year olds, while the average for the entire state is only 15.3%.

Tables on the following pages reflect the type of employment of the population divided by male and female. Hillsdale County has 21.1% of its total employed working force working outside the county.

HILLSDALE COUNTY AND SCHOOL DISTRICTS

There are eight school districts which presently comprise the Hillsdale County Intermediate District. They appear on the map below.

BY SCHOOL DISTRICT

1965 Total Enrollment 8730
1968 Projected Enrollment 9289

Source: Hillsdale County Intermediate School Office

Figure 4

Implications

The largest occupational group consists of operators and kindred workers with 3,036, while craftsmen, foremen, and kindred workers are second with 1,741. The third major group is farmers and farm managers with 1,371. With the rural farm residents mentioned earlier, it is only natural to find agricultural employment quite high in the county.

Overall economic information reveals 28.4% of Hillsdale County's females are in the labor force. This is lower than the 32.7% average for the state. The county is higher in non-worker ratio in comparison to the state with 1.71% for Hillsdale and 1.66% for the state. The very high proportion of 21.1% of its total employed working force working outside the county is indicative of the lack of employment opportunities within the county.

A very critical point is the large percentage (26.6%) of families with incomes under $3,000. The state as a whole has only 15.7% of the population in this category. This high figure could possibly be a reflection of the large number of aged persons in the community and the types of employment opportunities available.

The population of Hillsdale County was 34,742 in 1960. According to projections the population may increase at a rate of 300 per year. This would result in a population of 37,742 in 1970.

In 1960, the labor force included 36.9% of the total population or 12,823 persons. If the labor force consists of 36.9% in 1970, and if the population

increases at the rate projected, then there will be 13,965 persons in the labor force in 1970 in Hillsdale County. This will represent an increase of 1103 persons in the labor force in the 1960 decade.

Stated another way, 110 persons would enter the labor force each year. Therefore, it would be reasonable to assume that 100 new jobs would be required each year to keep up with the population growth in Hillsdale County.

Figure 5

AGRICULTURE EDUCATION

Hillsdale County has 384,640 acres of land, 312,586 of which were in farm in 1964, according to the 1964 U.S. Agricultural Census.

The figures below will give an overall picture of some of the types of farms, number of farms and trends in farming by comparing 1954 and 1964 figures.

	1954	1964	Change
Acres in Farms	327,122	312,586	- 14,536
Crop Land Harvested	177,458	168,901	- 8,557
Number of Farms	2,907	2,307	- 600
Size of Farms in Acres	112.5	135.5	+ 32
Value of Land Per Acre $	126.00	$ 190.00	+ 64.00
Major Types of Farms & Income			
Grain	680	465	- 215
Dairy	725	517	- 208
Poultry	130	53	- 77
Livestock	340	303	- 37
General & Unclassified	1105	906	- 145
Total Farm Product Sales $	11,387,772	16,137,541	+ 3,243,089
Tenure			
Full and Part-Time Operators	2558	2117	- 441
Tenants	334	118	- 156
Working 100 or more days off farm	1095	1015	- 80

As the above figures show, Hillsdale County is an agricultural county in

which livestock and general farming predominate. About 50% of the farm operators work 100 or more days at off-farm jobs. In the last ten years values of agriculture land have increased by one half and size of farms has increased by 32 acres, while the number of farms has decreased by 600. Total farm sales have likewise increased by three and one-third million dollars.

Nationally, 8% of the total population live on farms, but more than 30% of the total working force is engaged in the producing, processing, and distributing of farm products and servicing farm operators.

Present Agricultural Program in Hillsdale County High Schools

All eight schools in the county last year offered vocational agriculture to 382 students. Eight fully certified teachers were employed, but none of these teachers spent full-time teaching agriculture. 131 other students were enrolled in general agriculture.

In adult education in agriculture, all eight vocational agriculture departments in cooperation with the Cooperative Extension Agent and the Soil Conservation Service held classes in Soils and Farm Management last year (1965-66). Enrollment was over 100. Classes met as one group one week, divided and met in eight local groups the next week. This is the second year for this type of adult education course.

Vocational-Technical Study Questionnaire

Results from the labor questionnaire showed that 76% of those answering (543) would avail themselves of additional training if offered locally. Of this number, 30 indicated an interest in agriculture and 45 in the related area of conservation for a total of 75 or 18.2% of the total sampled group. This indicates a sizeable group with interest in adult education in the agricultural field.

Education Aspirations of Junior Survey

In this survey, 21 or 4.3% checked agriculture, 7 or 1.4% checked conservation and 7 or 1.5% checked veterinary medicine - for a total of 35 (7.1%) who were interested in the area where agricultural training is necessary.

Projections for the Future

Even though the number of farms in the county is decreasing while their size and value of products sold is increasing, farming will remain an important segment of the county economic picture in the forseeable future. In addition, many agriculture related occupations (agri-business) supply and servicing the farmer will offer job opportunities for persons with an agricultural background and training.

Recommendations

Local high schools should continue to offer basic courses in:

1. Basic plant science, including conservation, forestry, landscaping, gardening, and basic crops.
2. Basic animal science, including nutrition and feeding inheritance and production, parasites and diseases, marketing and processing practices as they relate to the major animal enterprise groups.
3. Soil science including fertilizers, water conservation, and tillage practices and new soil technologies.

A vocational-technical center should offer courses at a high school level in:

1. Specialized Plant Science
2. Specialized Animal Science
3. Farm Power Mechanics and Farm Machinery
4. Farm Management Practices
5. Related Agricultural Occupations

Post-high school courses should be offered in:

1. Farm Management
2. Farm Power Machines and Machinery
3. Horticultural Practice in Landscaping, Gardening, Floriculture, etc.
4. Agri-business Technology (agriculture related occupations)

Suggestions for Implementing Recommendations

Schools should continue to offer courses in agriculture of a basic and general nature at the present high schools. Specialized training for the 11th and 12th grades and those out of high school should be offered at a vocational-technical center.

Post high school facilities at a vocational-technical center should be made available to advanced students on a block time basis for specialized training in areas not offered in local schools. Students should remain in local high schools for their general education courses.

BUSINESS - DISTRIBUTIVE EDUCATION

Reports were received from all eight schools in the county. All have courses in typing with enrollments ranging from 36 to 130. There are bookkeeping courses offered in all eight with enrollments from 11 to 76. All schools have shorthand courses, six teach office practice, and four teach general business.

Total enrollments for the county are as follows:

General Business	110
Bookkeeping	277
Typing	614
Office Practice	76
Shorthand	132
Office Machines	10
Stenography	10
Business Law	60

This makes a cumulative total of 1289, but some students are counted more than once, since they are taking more than one of the courses included in the survey.

All eight schools have at least one commercial teacher (two schools have two) meeting the standards required for approval by the University of Michigan and each has at least one room devoted to commercial subjects.

Inventory listings indicated an adequate supply of typewriters for the classes in each of the schools. Some schools, however, do not have or

failed to list such machines as calaculators, adding machines, and duplicators. Total value of the equipment is $ 28,480.

All schools have shorthand classes, but only one offers beginning and advance shorthand concurrently. Drop-out rate after the first year of shorthand is reported to be very high.

A weak spot in the business field training appears to be in the cooperative occupational education program. Only two schools carry on such an effort. During the year just ended these two had reported a total of 116 students in the program, most of them working in the retail field. Coordinators help place students in interest-related courses and work. There appears to be definite need for expansion of this program.

Business and Distributive Education

There were 543 returns out of 3,000 questionnaires distributed to workers in the county, and 44% of those answering felt that additional occupational training was necessary for their work. A solid 76% said they would avail themselves of additional training if it were available locally. This would indicate an interest among these 76% in upgrading themselves, either to do a better job where they are, or to find a better position.

Of the 412 interested in more training, 96 (or 23%) were most interested in business management studies. This number was topped only by those interested in the metal trades.

Sixty two (or 15%) wanted accounting studies; 37 (or 9%) wanted finance; 21 secretarial studies; 24 courses in selling, and nine were interested in the retailing field.

Eighteen percent of the responses received in the survey of business, industry and agriculture came from retailers.

Employers in this field listed the greatest number of workers to be in the general office category, with clerk typists next, then bookkeepers, bank clerks or tellers, and stenographers. Over two thirds of the employees are female. Some scarcity in the supply of stenographers is predicted. Employers indicate a relatively adequate supply of general office workers, bookkeepers and clerk typists with little expectation of a big increase in the need for these workers.

Greatest number of employees in business jobs for people with formal education beyond high school but less than a four-year college degree were outside salesmen. They were followed closely by female secretaries and male business management personnel, then accountants, those engaged in merchandising, and sales managers, in that order. Males predominated this category except for merchandising and secretaries.

Employers see no decrease in this type of employment and according to a publication by the U.S. Department of Labor entitled Manpower-Challenge of the 1960's, the need for clerical and sales workers will increase 27% between 1960 and 1970.

Recommendations and Suggestions for Implementing Recommendations

Based on the above findings, the following recommendations are proposed for the area of Business and Distributive Education in Hillsdale County.

1. Each county school district should become aware of the ever increasing need for Vocational Business Education in the curriculum and make available to its high school students as many vocational business offerings as possible. This curriculum should be geared to the student who will terminate his education at the time of high school graduation.
2. County Businesses and Industries should inform the schools as to their present and future needs for high school graduates who have had business education courses. Also, it would be helpful to the schools if county businesses and industries would inform the schools of deficiencies in the Vocational Business Education of employees who were graduates of county schools.
3. The schools in the county which do not have Cooperative Education Programs should consider the feasibility of organizing this type of program cooperatively with other schools in the county.
4. A community college or a vocational-technical center for Hillsdale County residents should be established. This college or center should offer a vocational business curriculum which would serve the needs of the following three groups:

   A. Students who wish to enter office and distributive areas of work.

B. High school drop-outs and high school graduates who did not complete any or all of the vocational business education offered by their school.

C. High school graduates who completed all of the vocational business education courses offered by their school and wish to complete more advanced courses which were not offered by their high school.

VOCATIONAL - INDUSTRIAL EDUCATION

Industries and Employment in Hillsdale County

There are approximately 65 industries in Hillsdale County operating in over 23 different fields. The largest number (30) are concerned with metal by machining, stamping, forming, grinding, fabricating, or drawing. Five are engaged in woodworking, four in food processing, three each in concrete products, brooms and/or brushes, and utilities. Two each are engaged in grinding, dry goods, paper products, advertising, and wire drawing. Other singular industries include abrasives, air conditioning manufacture, mobile homes, marine equipment, and leather goods.

Total labor force for Hillsdale County (Michigan Employment Security Commission) is as follows:

		May 1966
Total Labor Force	10,150	
Agriculture Employment		1,100
Non-Farm Labor Force		9,050
Unemployed		375
Workers Involved in Labor-Management Disputes		50
Total Non-Farm Employment		8,625
A. Self Employment, Including Domestic		1,425
B. Wage and Salary Workers	7,200	
1. Manufacturing Industries		3,350
2. Non-Manufacturing Ind.		2,725
3. Government Employees-Federal-State-Local		1,125

Current Programs - Vocational-Technical Education

All eight schools in Hillsdale County offer some form of industrial training but appear to vary widely in curriculum offerings. Some courses are offered in alternate years in some schools, and some not at all. Two schools share a common instructor.

Courses offered, for the most part, seem to be more of an introductory nature and are not intended to actually prepare the student for any particular vocation.

Currently there are 956 engaged in industrial arts exploratory courses as follows:

Field	Number	Percent
Automotive	74	7.7
Drafting	237	24.8
Metal	166	17.4
Woods	334	34.9
General Industrial Shop	145	15.2

Shop mathematics classes per se are limited to Hillsdale only. Beginning welding (arc and acetylene) is offered in all schools. Only one school offered a course in spot welding.

Equipment inventory included a generally adequate supply of woodworking tools and equipment, including power tools and various other equipment suitable for introductory and beginning shop. Included were three milling machines, two shapers, and six metal lathes of various sizes. Total equipment

value was estimated at $ 24,011.00. Much of this inventory is also used in the Farm-Shop program.

There are two schools currently offering adult vocational-technical courses through the media of night school. Subjects offered are machine shop, drafting, woodworking, and shop math, but not all in both schools. Shop math will not be offered in the 1966-67 school year due to lack of an instructor. (It is understood that Jackson County may take Hillsdale County residents who wish to participate in this course.)

Some industries are taking advantage of the co-op program offered in vocational-technical fields by enrolling employees in several of the courses offered. The employers pay all tuition and supply expenses for participating employees.

Projections

County-wide surveys were directed to parents and students (4th and 11th grades), labor and industry. A synopsis of these follows:

Aspirations of Juniors (488 returns)

74% plan to obtain additional education beyond high school, with 30.3% seeking a college degree. 38% expressed interest in attending a community college serving Hillsdale County and offering two-year programs of a technical nature. Significantly, 45% suggested a local technical-vocational

center if a community college were not feasible. Occupationally, 75 or 17.4% chose industrial jobs, with the largest group, 38, aspiring to be mechanics, followed by draftsmen 15, industrial workers 14, metal trades 7, building trades 4, and laboratory technicians 3.

Parent Responses (226 returns)

60% of 11th grade parents favored some type of college training for their children. 20% desired some specialized training other than college. 55% say their children will attend or quite certainly will attend college. Please note 11th grade student responses in this area. 71% of the parents say they will leave post-high school education up to the students, and 70% of the students say they plan to continue their education beyond twelve grades.

Fourth grade parent responses (398) indicated educational desires for their children to about the same degree as parents of 11th graders. Current planning for the child's post-high school education was again very close to that projected by 11th grade parents.

Most significant was the response to the question concerning preference of a community college versus a community college offering vocational-technical programs, assuming both were as advantageously located. Parents favored the latter by 1.5 to 1 in the case of 11th graders, and 4th grade parents expressed preference by 5 to 1.

Labor Responses (543 returns)

34% indicated they were adequately prepared locally in school for their present job, and 62% indicated no additional occupational training was necessary for their present work.

70% indicated they would like to obtain additional training locally, if available. Laborers seem to be most interested in the following areas: metal trades (35%), building trades (23%), mathematics (23%), business management (21%), electronics and engineering (16%) each.

52% felt additional night courses at high school would be the best way to provide additional training, 28% felt a community college best provided this need, while another 28% preferred a vocational-technical center.

Industry Survey (73 returns)

Most responses (26%) were received from industry in the combined Business, Industry and Agriculture survey. Listed are some salient excerps.

Industrial Jobs (not requiring more than 12 grades). Most were employed in the capacity of machine operators, assembly line workers, sheet metal workers, unskilled laborers, and electricians in that order.

Greatest increases in employment, 1966-70, will be in the areas of machine operator, truck driver, general mechanics, and unskilled laborers.

Employers envision no decrease in industrial jobs listed in the survey.

A scarcity in the local supply of qualified employees is projected as being the greatest in the area of machine operators, auto mechanics, and general mechanics, and, although the needs do not reflect great increases, the local supply of appliance repairmen, electricians, millwrights, machinists, welders, and carpenters is not adequate.

Industrial Jobs (More than high school but degree not required.) Almost all employees are male workers. The greatest increase, 1966-70 period, appears in the area of quality control technicians and, close behind, drafting and design technicians, and foremen. No decreases in employment are projected in this area.

Employer Opinion and Practice. Twenty percent of the employers responding to the question regarding employment of high school drop-outs indicated a common practice is to place these drop-outs in the unskilled labor category. Thirteen percent are initially placed in semi-skilled jobs, 13% almost never in business office jobs, 10% almost never in sales jobs and apprenticeships. Employers allow drop-outs in apprentice programs only infrequently. Fifty percent of the drop-outs employed are unsatisfactory as employees, say employers, though many could be retrained in laboring jobs. Twelve percent of respondents indicated that drop-outs needed a considerable amount of additional occupational education or training to become satisfactory employees.

The high school graduate fared only slightly better than drop-outs in the overall view of employers. It is a fact that the graduate has a better

than three to one chance of entering an apprentice program than the drop-out. Twenty two percent of employers felt that the graduates needed additional occupational education or training.

In response to the question, "To what extent do existing educational facilities in Hillsdale County area meet the occupational and training needs of your company or firm?", 40% selected "fairly well", 25% "poorly", and only 10% "very well".

Thirty nine percent of the employers felt there should be substantial expansion of vocational programs in existing high schools, 25% favored creation of an area vocational-technical school, and 18% preferred establishing a strong occupational program in a post-secondary institution. Thirty two percent of the respondents were undecided as to the individual's or their company's continued participation in further study toward improving occupational training in the Hillsdale County area. Twenty six percent answered "yes" to the question, 19% "no".

Formally organized training programs for employees are offered in only 25% of the industries responding to the question. Fifty two percent indicated there was no organized company training program available. Of those offering a "yes" response, the majority indicated that same was implemented through the apprenticeship program. A few offer supervisory or technician training. There are only two industrial organizations currently using the adult education program as a means of furthering the vocational-technical skills of their employees via a night school training program.

The fugure population and economic growth of Hillsdale County depends largely on employment opportunities in the manufacturing concerns located therein. Here are some industrial employment comparisons of interest:

	Oct. 1961	June 1966	Est.* 1970
Manufacturing Industries	2,485	3,425	4,288
Non-Manufacturing Industries	3,945	2,850	2,314
Government-Federal-Local-State	300	1,125	3,183
Total Wage & Salary Workers	6,730	7,400	9,785

Source: Michigan Employment Security Commission
* Estimate based on trends derived from first two columns.

According to estimates by the Hillsdale County Planning Commission, the Hillsdale County total labor force (agricultural and self-employed persons included) should equal 13,965 persons by 1970. The U.S. Chamber of Commerce states that each 100 new factory workers means 296 more people in the community, 112 more households, 51 more children, $ 590,000 added personal income per year, 167 more car registrations, 174 more workers employed, 4 new retail establishments, $ 360,000 more retail sales annually, and $ 677,000 state equalized valuation added to our tax base.

Recommendations

The industrial programs do not appear to be adequate nor very well equipped. The committee would recommend:

1. The secondary schools strengthen their industrial arts programs and offer exploratory training in a wide range of industrial areas.

2. High schools up-grade and expand vocational-technical programs generally, and provide specialized courses for interested and able students on an area basis. It is suggested this type program be particularly oriented to the 11th and 12th grades.

3. Specialization should continue at a post-high school level.

4. More technical areas such as auto mechanics, metal area, drafting, electronics and woodworking be offered.

5. Basic understanding of the relationship among industrial areas be stressed.

6. Positive work attitudes need to be continually promoted in high schools.

7. Guidance counselors should become better informed and secure information regarding vocational opportunities.

8. Vocational-technical programs should be oriented toward helping drop-outs and/or adults enter or re-enter the labor market.

9. An expanded adult vocational-education program.

10. More emphasis be accorded industrial cooperative training programs.

Implementation

1. Schools should up-grade existing industrial arts programs and provide vocational-technical programs emphasizing industrial needs.

2. All schools should provide a basic inventory of machines, tools, and equipment for each course offered.

3. Consideration should be given to a vocational-technical education center for the county which would provide advanced courses, and equipment to implement same, for high school and post-high school students, and adults.

4. If a single county facility is not feasible, then consideration be given a multi-county center.

5. Any plans for a vocational-technical center should give consideration to a tuition system for post-graduates. This should not deter use of the facility but instill a sense of responsibility and determination in the student to the benefit of both the student and the program.

6. Suggested curriculum for occupational preparation is attached.

SUGGESTIONS FOR CURRICULUM BUILDING LEADING TO OCCUPATIONAL PREPARATION

Completion of any one of the occupational areas in the 11th grade may provide adequate background for cooperative occupational training during the 12th grade. Completion of any one of the occupational areas designated will provide a minimum of 900 hours of occupation preparation exclusive of other essential related subjects. The program will provide opportunity for trainees to complete training for lesser job priorities during the 2-year period.

Figure 6

SUGGESTIONS FOR CURRICULUM BUILDING LEADING TO OCCUPATIONAL PREPARATION

Completion of any one of the occupational areas in the 11th grade may provide adequate background for cooperative occupational training during the 12th grade. Completion of any one of the occupational areas designated will provide a minimum of 900 hours of occupational preparation exclusive of other essential related subjects. The program outlined will also provide opportunity for individuals to complete training for jobs requiring lesser proficiencies.

Figure 7

HOME ECONOMICS EDUCATION

Types of Programs Locally

At the present time, each of the schools of the county is offering a program in Home Economics. The primary purpose of these programs is preparation for home making rather than occupational employment in the world of work outside the home. The areas covered are sewing, cooking, family relations and general living. No vocational training for employment is now being offered.

Because of the changing role of future housewives and mothers, the home economics curriculum should be re-evaluated to better prepare students for their places in society. Also, more experiences should be provided for girls which will prepare them for entry into occupations.

Projections for Future

Surveys were made by parent and student questionnaires (4th and 11th grades), labor questionnaire, business and industry questionnaire, and facilities, curriculum, equipment questionnaire.

On the survey, "Parents' Expectations of Post-High School Programs to be Entered by their Children", 3.1% of the 11th grade parents indicated occupation of homemaking as the future occupation of their child. The percentage of the 4th grade parents indicating same was 1.5%. Also, the response to questionnaire, "Occupational Aspirations of Juniors," indicated 2.3% were

interested in homemaking as their occupation.

Of those who completed the Labor Questionnaire, 2.9% listed homemaking as the area of study in which they would like additional occupational training.

The committee received an over-view of the home economics programs in the schools and critiques by individuals actually implementing these practices in everyday living by inviting two home economics teachers and the Hillsdale County Extension Home Economist for consultation.

It was pointed out that the average high school student in this area is college oriented because this is the accepted status among them. Guidance counselors, it was felt, should be better oriented in the vocational areas, as they seem generally to foster the college/university approach in their dealing with the students.

The committee discussed the idea of centralization of resources. With this possibility, perhaps several kinds of programs could be offered. A vocational center may attract junior and senior high school students, both male and female and also serve drop-outs and older persons who might otherwise not wish to return to a high school setting. If employers were aware that home economics vocational training was available, the committee and guests felt the employers would begin requesting trainees from these programs.

Much time was devoted to the kinds of training that might develop if a home economics vocational program could be established. Some of the areas

mentioned were food (commercial food handling, preparation of chefs, male and female), dietician, waitress, sanitation, business management (economics), child care, general assistance in homes where families need extra help, care of elderly persons, post-hospital convalescents, practical nursing (one year training for licensure in Michigan), distributive education, and mathematics. The committee noted that the advent of Medicare will bring more requests for home nursing. A cooperative program seems to be quite appropriate for some of these offerings and perhaps team teaching. Again the recommendation that high school counselors should let students know about the opportunities in non-college academic training was made by the guests.

Recommendations

In a recent report, a summarizing of possible needs for Vocational-Technical Education in Home Economics related areas was listed as follows:

1. Health and Welfare

   A. Housing Agencies, Senior Citizens Centers
   B. Homemaker Services - also sometimes called Family Aide, Mother's Aide, Home Helper

2. Home Makers

   A. Management of own home
   B. Volunteer Service
   C. Family Finance and Money Management

3. Community Programs for Special Groups

   A. Child Care Center Assistants
   B. Nursery School

4. Institution Administration (Quantity Food Preparation)

   A. Cafeterias and Restaurants - Waitresses - Cooks
   B. Hospitals, Hotels, Clubs
   C. School Lunch Programs
   D. Housing for Senior Citizens

5. Service to Consumers in Foods and Equipment

   A. Food Producers and Processors
   B. Equipment Manufacturers (Demonstrators)

6. Merchandising of Clothing, Textiles and Home Furnishings

   A. Department Store Sales and Alteration Department
   B. Home Furnishings Studios
   C. Specialty Shops

The committee feels there is a need to train young women in home economics oriented vocational training, for personal advancement as well as being able to do higher calibre work for employers.

Women will return to full or part-time employment after their children are in school and can secure higher paying employment with additional training.

Possible classes could include meal planning and marketing within the family's food budget, child care and development, laundering, and purchase and care of clothing.

Suggestions for Recommendations

1. Continue and improve present junior high and early secondary programs to provide exploratory experiences so students may discover vocational objectives in the world of work.

2. Provide a program which will enhance appreciation of the vital importance of excellence in home making skills.

3. Add programs at the 11th and 12th grade levels to produce skills necessary to deal with needs listed in this report.

4. Provide programs for improvement of adults operating in the field of Home Economics.

5. Advanced technical skills can probably be best provided for in a vocational-technical center rather than in the individual school districts as presently constituted.

GENERAL RECOMMENDATIONS

1. Vocational-technical education should be a vital aspect of the curriculum from early elementary through senior high. At the elementary level, students should be introduced to the world of work by examining occupational areas (i.e. the world of the policeman, fireman, factory worker, etc.). While providing this introductory material, emphasis on the dignity of vocational-technical employment should be maintained. This basic introduction to the vocational-technical area should be integrated into the existing elementary curriculum and should not be taught as a special adjunct.

2. At the junior high level, the basic introduction to the field should continue but should be augmented with basic skill courses in general areas (agriculture, home economics, business education, industrial education). These courses should remain general in nature with the emphasis on introductory and exploratory experiences which would point out to the student broad occupational areas and introduce him to the skills that will be necessary for employment in these areas.

3. During the early years in high school, students should continue with the exploratory experiences begun previously, but may also begin to familiarize themselves in some depth with a sequence of vocational-technical courses in the student's area of interest and ability. Vocational counseling may be helpful here to assist students in differentiating and sharpening their vocational interests.

4. The later years in high school should offer students an opportunity to specialize in vocational-technical areas of their choice. It is expected that these students will have had an opportunity to "sample" many technical-vocational areas through earlier educational experiences.

5. Specialization needs to be continued beyond high school and a comprehensive facility should be provided for this purpose.

6. This facility should be available for high school students in certain vocational areas since most high schools cannot economically provide the degree of specialization and training necessary for job preparation.

7. Finally, this new facility should also be available for persons other than high school students and recent high school graduates who wish to upgrade present job skills or to undergo training or retraining.

8. Appropriate vocational counseling is important from elementary school through high school to job placement in reinforcing positive attitudes toward technical-vocational employment, in familiarizing students with local market conditions and occupational needs.

9. Cooperative on-the-job training between school and industry should be encouraged as a method of providing vocational-technical education in occupational areas where it is not feasible to provide organized preparatory classes in the secondary school or in a vocational-technical center.

SPECIFIC RECOMMENDATIONS

1. The eight local school districts should continue to provide introductory and exploratory experiences for boys and girls in the study area. Opportunities for specialization should increase with the age and grade level of the student. Local schools need to evaluate and improve the scope and content of vocational-technical offerings.

2. Existing local school districts might consider these basic introductory areas:

<u>Agriculture</u>
a. Basic plant science
b. Basic animal science
c. Basic soil science

<u>Business and Distributive Education</u>
a. General business practices
b. Bookkeeping and office practice
c. Shorthand, typewriting, basic office machines
d. Introduction to retailing practices

<u>Industrial Education</u>
a. Introduction to metal working, power and auto mechanics
b. Introduction to woodworking
c. Basic concepts in drafting and design
d. Basic concepts in electricity and electronics
e. Introduction to graphic arts

<u>Home Economics</u>
a. General homemaking skills
b. Home and family living
c. Introduction to and familiarization with principles of home economics as a vocation (practical nursing, textiles, child care, institutional administration)

3. A comprehensive vocational-technical center should be provided to facilitate specialization at the high school level and to make possible more varied and comprehensive programs. This center should also be available for use by other than high school students, namely those who wish to enter the job market or to re-enter. (High school drop-outs, temporarily displaced workers, anyone who wishes to upgrade his job skills or to learn a different trade.)

4. Possible areas of study in a vocational center:

Agriculture

a. Specialized plant science
b. Specialized animal science
c. Farm power mechanics and farm machinery
d. Farm management practices
e. Related agriculture occupations
f. Horticulture practices
g. Agriculture business

Business and Distributive Education

a. Accounting
b. Finances
c. Salesmanship
d. Retailing practices
e. IBM computer (office machines)
f. Advanced stenography
g. Business English and letter writing
h. Business law
i. Small business management

Industrial Education

a. Auto and power mechanics, metal working
b. Woodworking
c. Drafting and design
d. Graphic arts
e. Electricity and electronics

Home Economics

a. Practical nursing
b. Homemaking service and child care
c. Dietetics
d. Textiles

The center should also provide on-the-job training experiences in all appropriate areas described above. Counseling and guidance, job placement and evening programs are considered a vital function.

5. Advantages of such a center are considered to be:

a. Broad tax base
b. Opportunities for all in the study area
c. Comprehensive curriculum with minimal duplication
d. Administrative efficiency
e. Greater flexibility
f. Reflects local needs and market conditions

6. It is possible that this center might be provided in conjunction with an area community college.

7. High school counselors can contribute greatly to the unification of the practical arts and vocational-technical programs in the high school and can contribute greatly to assisting students in selecting occupational areas in keeping with their interests, aptitudes and abilities.

8. Local school districts should continue to investigate the possibility of sharing existing facilities, staff and students in extending and improving local programs.

9. Provisions should be made for continuous evaluation of vocationally oriented programs.

APPENDICES

APPENDIX A

Parent and Student Questionnaires

1. Questionnaire Submitted to 11th Grade Students

2. Questionnaire Submitted to Parents of 4th Grade Students

3. Questionnaire Submitted to Parents of 11th Grade Students

4. Tabulation of Results of the Above Questionnaires

COMMUNITY COLLEGE STUDY
STUDENT QUESTIONNAIRE - GRADE 11

Check the most appropriate answer for you for each item.

1. What high school do you attend?

(1)_____ Camden-Frontier
(2)_____ Hillsdale
(3)_____ Jonesville
(4)_____ Litchfield
(5)_____ North Adams
(6)_____ Pittsford
(7)_____ Reading
(8)_____ Waldron

2. What is your sex?

(1)_____ Female
(2)_____ Male

3. What is your present course of study?

(1)_____ College Preparatory
(2)_____ General
(3)_____ Commercial, business
(4)_____ Vocational
(5)_____ Other (specify)_____

4. What do you estimate your high school grade average to be?

(1)_____ A
(2)_____ B
(3)_____ C
(4)_____ D
(5)_____ E

5. How far in school do you want to go?

(1)_____ Through high school
(2)_____ High school and specialized training other than college
(3)_____ One or two years of college
(4)_____ College degree
(5)_____ Other (specify)_____

6. How definite are your plans to go to college or some other form of specialized training after high school graduation?

(1)_____ Definitely plan to go
(2)_____ Probably will go
(3)_____ Uncertain
(4)_____ Probably will not go
(5)_____ No intention of going

Answer Question 7 ONLY if you indicated in Question 6 that you "Probably will not go" or "Have no intention of going".

7. Why did you reach the decision in Question 6 above?

(1)_____ Not interested in further education
(2)_____ Want to go to work
(3)_____ Want to get married
(4)_____ Will enter military service
(5)_____ Parents not in favor of my receiving additional education
(6)_____ Grades not good enough
(7)_____ Lack of finances
(8)_____ Undecided

8. Check the vocation you hope to enter when you complete your education.

(1)_____ Accounting
(2)_____ Advertising
(3)_____ Agriculture
(4)_____ Architecture
(5)_____ Art
(6)_____ Athletics
(7)_____ Beautician or Barber
(8)_____ Building trades

(9)_____ Business Management
(10)_____ Chemist
(11)_____ Conservation
(12)_____ Dental Hygiene
(13)_____ Dentistry
(14)_____ Drafting
(15)_____ Dramatics
(16)_____ Electronics
(17)_____ Engineering
(18)_____ Finance
(19)_____ Government Service
(20)_____ Homemaking
(21)_____ Hotel Management
(22)_____ Industrial Worker
(23)_____ Journalism
(24)_____ Laboratory Technician
(25)_____ Law
(26)_____ Law Enforcement
(27)_____ Mathematics
(28)_____ Mechanics
(29)_____ Medical Technician
(30)_____ Medicine
(31)_____ Metal Trades
(32)_____ Mortuary Science
(33)_____ Music
(34)_____ Nursing
(35)_____ Occupational Therapy
(36)_____ Pharmacy
(37)_____ Photography
(38)_____ Psychology
(39)_____ Religion
(40)_____ Retailing
(41)_____ Salesman
(42)_____ Secretary or Stenographer
(43)_____ Social Work
(44)_____ Teaching
(45)_____ Veterinary Medicine
(46)_____ Other (specify)
_____

9. If Hillsdale County is served by a community college offering one and two year programs in such areas as agriculture, business, nursing, secretarial, and technical courses, would any of these programs interest you in attending the college?

(1)_____ Yes
(2)_____ No
(3)_____ Uncertain

10. Where do you plan to go for your professional training?

(1)_____ Central Michigan University
(2)_____ Eastern Michigan University
(3)_____ Ferris State College
(4)_____ Hillsdale College
(5)_____ Michigan State University
(6)_____ University of Michigan
(7)_____ Western Michigan University
(8)_____ Other (specify)_____
(9)_____ Uncertain

11. With a community college within driving distance providing the first two years of college work, would you plan to take your first two years there and then transfer to a four-year college for the third and fourth year work?

(1)_____ Yes
(2)_____ No
(3)_____ Uncertain

12. If it were necessary to join with another county to establish a community college that would service Hillsdale County, which county would you prefer to join with? (Place a 1 before your first choice, a 2 before your second choice, and a 3 before your third choice).

(a)_____ Branch
(b)_____ Jackson
(c)_____ Lenawee

13. If a community college were not feasible locally, how would you suggest that advanced technical/vocational training be provided?

(1)_____ More use of high schools (night courses, etc.)
(2)_____ A technical/vocational center locally.
(3)_____ Other (describe)

14. Do you have one or more older brothers or sisters who are now attending or have attended college? If so, where?

(1)_____ Yes (which schools) _____
(2)_____ No

15. How far did your father go in school?

(1)_____ Did not complete the 8th grade
(2)_____ Completed the 8th grade
(3)_____ Some high school
(4)_____ Completed high school
(5)_____ Some college
(6)_____ Completed college degree
(7)_____ Some graduate school
(8)_____ Completed graduate degree
(9)_____ Other

16. How far did your mother go in school?

(1)_____ Did not complete the 8th grade
(2)_____ Completed the 8th grade
(3)_____ Some high school
(4)_____ Completed high school
(5)_____ Some college
(6)_____ Completed college degree
(7)_____ Some graduate school
(8)_____ Completed graduate degree
(9)_____ Other

17. What is the occupation of the head of your home (father if living).

(Be specific)_____

Dear Parent:

The Hillsdale County Intermediate School District, in cooperation with the eight county local school districts, is conducting a survey to determine possible community college needs, as well as advanced vocational-technical needs of students in the area.

A substantial part of the study is concerned with parents' opinions regarding the educational future of their children. We would very much appreciate your completing the attached questionnaire and returning them to the school by Friday, April 29. You need not sign the questionnaire.

On behalf of the Intermediate School District, thank you for your help.

Sincerely,

Community College Pre-Professional and
Vocational Technical Committees

PARENT QUESTIONNAIRE

For Parents of 4th Grade Students

Directions: Please do not write your name on this sheet. All answers are strictly confidential. Please check the one answer most appropriate for you for each question.

1. What is the name of the county in which you live?

_____ Branch
_____ Hillsdale
_____ Jackson
_____ Lenawee
_____ Other

2. What school does your 4th grade child attend?_____
(name)

3. How many children do you have in each of the following groups? (Indicate number of children in each age group.)

_____ Pre-school
_____ Kindergarten
_____ Grades 1-6
_____ Grades 7-12
_____ Beyond grades 12 or out of school
_____ Total number (exclude those no longer dependent on you)

4. How far in school do you want your 4th grade child to go?

_____ Through high school
_____ High school plus specialized technical or business training
_____ Nurses Training
_____ Through college
_____ College plus advanced degree work
_____ Other (specify)_____

5. In general, who do you feel should be permitted to go to college?

_____ Those with superior ability only
_____ Those with ability who have the financial means
_____ All who have ability to profit from college work regardless of financial means
_____ Other (specify)_____

6. What plans do you now have for your 4th grade child to continue his or her education beyond high school?

_____ None at the present
_____ Am leaving it up to the child
_____ Have a definite education savings program
_____ Will help child work his way through school
_____ Expect child to win scholarship
_____ Expect child to be trained at government expense (e.g., Armed Service)
_____ Other (specify)_____

7. How certain are you that your 4th grade child will attend college or some form of specialized training?

_____ Quite certain to attend
_____ Probably attend
_____ Uncertain
_____ Probably not attend
_____ Certain not to attend

8. If you feel that your 4th grade child will attend some form of post high school education or college, what type of program would you expect him or her to take?

_____ Undecided
_____ Accounting
_____ Agriculture
_____ Architecture
_____ Mathematics-Statistics
_____ Art or Arts and Crafts
_____ Auto and Airplane Mechanics
_____ Banking and Finance
_____ Beautician or Barber
_____ Building Trade (mason, electrician, carpenter, etc.)
_____ Business Administration

_____ Chemist (Industrial, research)
_____ Conservation (forestry)
_____ Dental Technology
_____ Dentistry
_____ Drafting
_____ Electronics
_____ Engineering
_____ Government Service
_____ Homemaking
_____ Industrial Management
_____ Journalism (reporting, editing, writing)
_____ Laboratory Technician (industrial, medical, etc.)
_____ Law
_____ Medical Technology
_____ Medicine
_____ Metal trades and Machine shop
_____ Ministry or Religious Education
_____ Music
_____ Nursing
_____ Psychology-Psychiatry
_____ Radio - T.V.
_____ Retailing or wholesale trades
_____ Salesmanship (retail, wholesale, representative)
_____ Science research
_____ Secretarial
_____ Social Work
_____ Teaching
_____ Veterinary Medicine
_____ Other (specify)_____

9. If a fully accredited community college is established in this area offering the first two years of college work and specialized training programs (technical, business, vocational, etc.) would your 4th grader be likely to attend this institution?

_____ Yes
_____ Probably Attend
_____ Uncertain
_____ Probably not attend college
_____ Certain not to attend college
_____ Will attend school elsewhere

10. If a community college is established in the area, would your other children be likely to attend?

_____ Yes
_____ Probably
_____ Uncertain
_____ Probably not go to college
_____ Will not attend college
_____ Will attend school elsewhere
_____ We have no other college-age or younger children

11. What is the occupation of the head of the household? (i.e. bookkeeper, banker, carpenter, chemist, engineer, police officer, truck driver, social worker, assembly line worker, and so on). Please be as specific as you can.

_____

12. If the wife is employed outside the home, please indicate type of employment as above.

_____

13. What formal training have the heads of the household had?

	Husband	Wife
Did not complete 8th grade	_____	_____
Completed 8th grade	_____	_____
Some high school	_____	_____
Completed high school	_____	_____
Some college	_____	_____
Completed college	_____	_____
Graduate School	_____	_____

_____ None
_____ Work on college degree
_____ Courses to help in my job or help to get a better job
_____ Courses to broaden myself
_____ Courses to help me improve my home
_____ Other (specify)_____

Dear Parent:

The Hillsdale County Intermediate School District, in cooperation with the eight county local school districts, is conducting a survey to determine possible community college needs, as well as advanced vocational technical needs of students in the area.

A substantial part of the study is concerned with parents' opinions regarding the educational future of their children. We would very much appreciate your completing the attached questionnaires and returning them to the school by Friday, April 29. You need not sign the questionnaire.

On behalf of the Intermediate School District, thank you for your help.

Sincerely,

Community College Pre-Professional and
Vocational Technical Committees

COMMUNITY COLLEGE STUDY

Questionnaire for Parents of 11th Grade Students

Please check one answer most appropriate for you for each item.
